

Case Study

Project: Steel Stockholder Office Space **Location:** South Yorkshire

sde were invited to create additional office space within the clients existing warehouse facility.

There were various constraints which we had to consider when developing solutions with our client. These included limitations on the amount of floor space available and the lack of fire escape routes. Our CAD team at sde overcame the floor space restrictions by designing a mezzanine floor structure which would take the office space onto a first floor level.

Works within this project included creating a new fire escape with associated builders works, stud partitioning, decorating and flooring, electrical installation and including heating and ventilation services in the form of air conditioning units.

The partnering approach we employ with our clients, and the pro active nature of our contracts delivery team ensured that this project was completed within the allotted 3 week program and to budget.
