Air Feeds

Rapid-Air Feeds

Rapid-Air gives you more choices.

Accessories and options.

Many accessories and options tailor Rapid-Air feeds to a variety of applications to feed metals, wire, plastic, fabric, you name it; and in most any shape including – flat, round, extrusions, etc.

Electric actuating valve.

An alternate to the standard actuating valve provided with each feed. Electric valve 2-way, normally open, one size for series A & B feeds, one for Series C, D, F, H, J & W feeds, and another with quick exhaust for Series L, P, FX & LX. A.C. or D.C. solenoid available.

Custom stock & feed clamps.

To accommodate special material configurations, such as extrusions, delicate surfaces or soft, pliable materials. Rubber, leather, nylon and vinyl are among the clamp insert materials available.

Special wear plates.

Replaceable wear plates can be grooved to accommodate special shapes and sizes.

Anti-buckling guides.

Specialty designed guides to prevent buckling of very thin flat or wire stock feeding at high speeds and/or long progressions.

Belt feed.

Enables feeds to accurately feed very limp delicate stock, including metals, teflon and other tapes, foil strips, fabrics, paper, photographic film and gasket materials. Material (even skeleton) is sandwiched between two endless belts to move it into or out of a press or other machines.

Safety guards.

See-through high-strength plastic safety guard shields the moving mechanism. For applications where safety requirements include machine guarding.

Multi-stroke control.

Provides longer stroke progressions between press strokes by cycling feed several times prior to a press stroke. Equipped with electric valve and fittings. Standard control variable up to 9 feed cycles - other control models available. All feed series can be used with the multi-stroke control.

Pilot release stock clamp.

The spring-loaded stock clamp, optional with all Rapid-Air feeds, is recommended for most applications. For unusual requirements, the pilot release stock clamp is available. An electric signal actuates the pilot release clamp so that it lifts completely to allow for free movement of stock to position material when pilots are used. Solenoid valve not included. Order separately from Rapid-Air.

Rapid-Air units are simple to service. All internal parts are readily accessible. Please visit our web site at www.rapidair.com. Service manuals are available for download. AutoCAD assembly files may be e-mailed to you for design assist. (English language only)

Model Selection

Model	Max Material Width	Max Stroke Length*1	Stock Thickness*2	Speed Cycles/Min. (recom.)*3	Pulling Capacity*4
A2	38,1mm (1-1/2")	50mm (2")	0,051-1,02mm (0,002" - 0,040")	260	9,1kg (20 lbs)
A4	38,1mm (1-1/2")	101,6mm (4")	0,051-1,02mm (0,002" - 0,040")	200	9,1kg (20 lbs)

LX12	305mm (12")	305mm (12")	0,13-3,18mm (0,005" - 0,125")	50	114kg (250 lbs)

*1 Electric Actuating Valve is recommended for feeds that have stroke length over 203mm (8"). Add "E" to model number.

*2 Thinner materials and/or long strokes with thin materials possible by using anti-buckling guides. Maximum thickness capacity increases by same percentage as stock width decreases (up to max. of 150%).

*3 Approximate at maximum stroke length. Heavy stock requires slower speeds.

*4 At 6,9 bar (100 psi). (Includes allowance for normal friction of moving parts).

Add "W" to Model A or B for replaceable wear plates (standard on all other models).

Add "P" to model no. for feed with control port only. Add "S" to model no. for feed with end-of-stroke sensors.

Feeds should always draw material from a free loop, supplied by a powered reel or powered straightener.

Air Feeds

Specifications and Dimensions

Compact and versatile. Conveniently and easily mounted where you need them.

NOTE: CAD files available on request.

Air Consumption and Speed by Model Series

FEED AIR CONSUMPTION

FEED AIR CONSUMPTION

SPEED VS. PROGRESSION

The following graph indicates recommended maximum speeds anticipated for various progressions within each feed series (using an average stock thickness for each series). Feeding heavier stock would lower the maximum speed limit accordingly.

* FREE AIR at 6.9 bar (100 psi) – 100 cycles/min.
** FEED DISPLACEMENT liters per second (C.F.M.) – 100 cycles at operating pressure

* FREE AIR at 6.9 bar (100 psi) – 100 cycles/min.
** FEED DISPLACEMENT liters per second (C.F.M.) – 100 cycles at operating pressure

Servo Feeds

Model Selection

How to select the Rapid-Air Servo Feed model that is right for you.

Primary considerations in selecting a servo feed should be material thickness, width and press speed. Once the model series has been selected, review the description in the Model Selection Guide below for features associated with that model. If questions remain, call a Rapid-Air sales engineer for guidance.

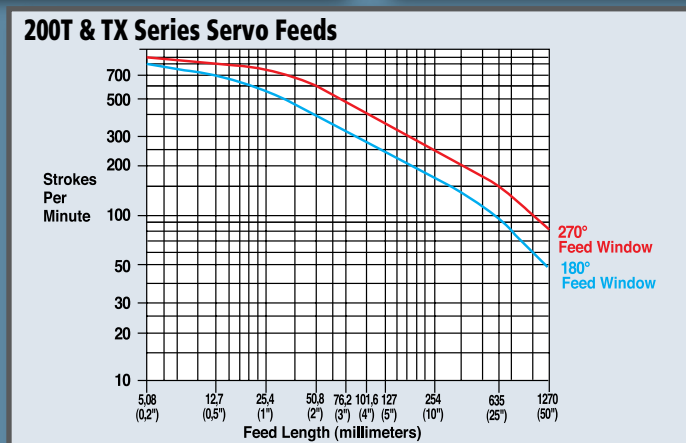

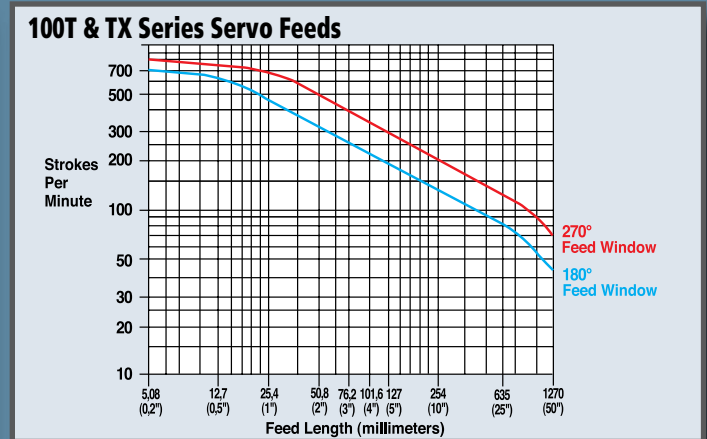

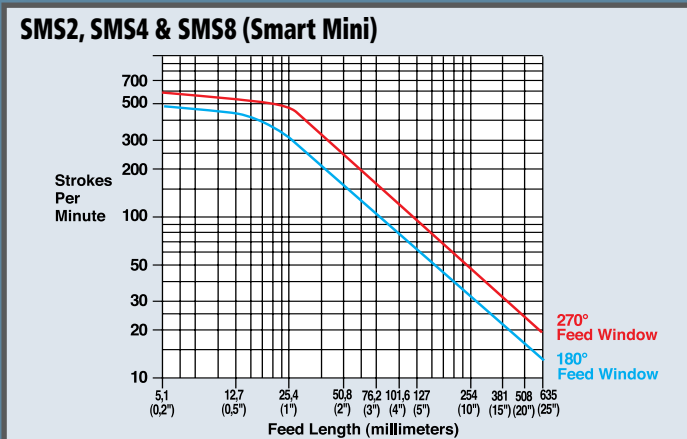

Model Selection

Model	Max Material Width	Max Thickness Capacity at Full Width	Max Feed Roll Opening	Standard Roll Type
Smart MiniServo				Hardened & Ground Standard
SMS2	51mm (2")	1,02mm (0,040")	1,52mm (0,060")	
SMS4	102mm (4")	1,02mm (0,040")	1,52mm (0,060")	
SMS8	203mm (8")	0,79mm (0,031")	1,52mm (0,060")	
Standard 100T Series				
106T	152mm (6")	2,66mm (0,105")	3,81mm (0,150")	
112T	305mm (12")	2,03mm (0,080")	3,81mm (0,150")	
118T	457mm (18")	1,65mm (0,065")	3,81mm (0,150")	
Heavy Duty 100TX Series

218TX	457mm (18")	2,54mm (0,100")	4,57mm (0,180")	
224TX	610mm (24")	2,54mm (0,100")	4,57mm (0,180")	

A.C. power appropriate for country of use standard.

Performance Data

The relationship between strokes per minute and feed length for each model.

Speed charts are only intended to be a guide for potential production rates. Charts represent max. S.P.M. with mechanical pilot release or no pilot release. Using air pilot release limits speed to 300 S.P.M. with adequate air supply.

Straightening range based on low carbon steel, commercial grade.
A.C. power appropriate for country of use standard.

High-torque, quick response drive in a compact package.

Equipment To Expand Your Straightening Capabilities

Standard material flow direction. (Facing straightener control)
SA and SB straighteners flow left to right. SBX, SCX and SD straighteners flow right to left. All models are available with opposite flow direction. Please specify when ordering. Factory convertible.

Entrance/exit cascade rolls.
Fully adjustable entrance and/or exit cascade rolls are available for all models.

Optional heavy-duty dancer arm.
Dancer arm with adjustable counterweight available for SCX and SD models.

Optional loop controls.
All straightener models are equipped with an external plug connector which allows simple connection of the Rapid-Air loop control systems.

Rapid-Roll Power Rolls

An ideal pulling source.

If you don't need straightening capabilities, but do require a pulling source to maintain a free loop for consistent feeding, Rapid-Roll is the answer. Many different models are available to meet flat or wire stock requirements.

Model Selection

Model	Max Material Width	Recommended Operating Range	Speed	Max Speed per min

Stock Reels

100 Series Stock Reels

The most complete selection available from any source.
Powered and non-powered. Adjustable and fixed centers.
 Max. capacities 22-227kg (50-500 lbs.).

We build our stock reels for lasting durability featuring heavy duty shafts with full bearing support to handle heavy coil loads day in and day out, rugged coil centering arms, and sturdy all steel cabinets and support bases. The options and accessories for each of our models enables you to configure a reel practically any way you want for dependable payoff of coil stock.

Powered reels.

Electric drive-powered reels are made for ease of operation with innovative standard features such as our proportional control system. This top-of-the-line patented system features variable speed capability, electronic loop height adjustment and loop sensing arm range control. A.C. power appropriate for country of use standard.

*Non-powered.

Non-powered reels are available in all sizes, 22kg (50 lbs.) capacity to 227kg (500 lbs.) capacity. All have adjustable mechanical drag brakes. Add NF for non-powered fixed center or NA for non-powered adjustable center.

The smooth running capability of our hydraulic reel means superior performance when handling delicate materials. The light tensioning capability offers an outstanding alternative for difficult rewind applications.

Model RH34F

100 Series Powered, Non-Powered and Hydraulic Dimensions

*R50 Series

Loop Controls

LLS Series Double Lo-Loop Space-Saver, payout or rewind (patented).

An entirely new way of looking at the placement of equipment in a stamping plant. With many types and sizes of material it is now possible to place a reel of material

100 Series

very close to a feed mounted on a press and still maintain a substantial amount of material in reserve for interference free feeding of material. It is also now possible to feed directly from a non-powered reel without a concern for slippage caused by the high jerk created by the speed of feeding from a high inertial load of material on the reel. The Rapid-Air Lo-Loop keeps the reel moving at the proper speed of rotation needed for smooth operation.

Cutters and Cut-To-Length

Pivoting Arm Cutters and Reciprocating Blade

For a variety of applications. Accurate, automated for precise, high-speed high volume repetitive jobs.

Rapid-Air offers a full range of pneumatic stock cutters that provide outstanding application flexibility and efficiency in handling your routine or specialty shearing and cut-to-length jobs. Choose from a small pivoting arm model for light gauge material up to a cutter that exerts 3636kg (8000 lbs) of force for 610mm (24") wide flat stock. It can be a stand-alone press or base-mounted unit, or part of a fully synchronized cut-to-length system.

Flat stock pivoting arm cutters

Models
SCR 125 & SCL125
Flat stock up to
32mm (1-1/4") wide

- Pivot arm adjusts laterally for cutting blade clearance.

- Eight cutting edges per blade can be used before resharpening.

- Stock guides included on flat stock models.
- Custom guides available.

C-T-L Machines

Accurate, automated stock cutting for precise, high-speed high volume repetitive jobs.

A Rapid-Air cut-to-length machine with servo feed, or servo feed straightener (KBX100), is a real production booster for both long or short length stamping operations. These integrated units may provide a maximum feed stroke of up to 2537cm (999") or more, and handle maximum stock widths up to 610mm (24").

A Rapid-Air cut-to-length machine combines an air operated stock cutter and a Rapid-Air feed or a programmable Rapid-Roll feed with a control system. All of this is mounted in one convenient, easy-to-use, low cost package for use on simple cut-off operations.

Consult our application engineers regarding special control programs and feed-cutter combinations available to meet your specific needs.

Reciprocating blade cutters

- Solid structural parts hold long-term alignment and cutting accuracy.
- Precision machined operating components are all housed inside the cutter.
- No external cylinders, valves or hoses.

- Adjustable stock guide rollers.
- Safety guard - stock must pass underneath the guard before reaching recessed cutting area.

- Quick, simple blade adjustment.
- Upper blade lowers on a cam assembly.
- Thumbscrews position lower blade front-to-back.

- Easy blade removal.
- Four blade edges can be used before resharpening.
- Tool steel blades are standard.
- Carbide insert, titanium nitride coated and other type blades available.

- Internal pneumatic piston system includes integrated quick exhaust and muffler.
- 457mm (18") and 610mm (24") cutters include selectable tonnage control.
