

# Tuning the Guitar!

Before we play any songs, we need to make sure the guitar is in tune! Have a look below to learn how its done!

How to remember the strings!

**E**at **A**ll **D**ay **G**et **B**ig **E**asy

Here you can see the notes of the open strings. When tuning the guitar use this diagram as a reference for which string is which note!

The most popular method of tuning a guitar is to use a digital guitar tuner. These are highly accurate and can be purchased at any reputable music shop.

Another great way to check whether your guitar is in tune is by ear. By playing the 5th fret (with exception to the G string which is 4th) and the open string directly above, you can compare how in tune the strings are to each other as this compares the same note!
