

# I miss LSD

Tim Brown - Head Of Research

Portcullis Computer Security Ltd – [www.portcullis-security.com](http://www.portcullis-security.com)

[/company/portcullis](#)

@portcullis

/PortcullisCSL

[gplus.to/portcullis](#)

# CONTENT/TOPICS

- Why the title?
  - AIX, BSD, HP-UX, IRIX, JVM, Linux, SCO, Solaris
  - Argus Pitbull -  
<http://www.lsd-pl.net/projects/kernvuln.zip>
- What this talk will cover
  - So far I've researched...
  - What next?
  - The fascination with AIX

Portcullis Computer Security Ltd – [www.portcullis-security.com](http://www.portcullis-security.com)

[/company/portcullis](#)

@portcullis

/PortcullisCSL

[gplus.to/portcullis](#)

# WHY THIS IS IMPORTANT

- UNIX is everywhere
- ... except the Desktop (maybe next year?)
  - Android
  - iOS
  - Your favorite embedded device
  - Your bank

Portcullis Computer Security Ltd – [www.portcullis-security.com](http://www.portcullis-security.com)

[/company/portcullis](#)

@portcullis

/PortcullisCSL

[gplus.to/portcullis](#)

# THE ATTACK SURFACE

Portcullis Computer Security Ltd – [www.portcullis-security.com](http://www.portcullis-security.com)

[/company/portcullis](#)

[@portcullis](#)

[/PortcullisCSL](#)

[gplus.to/portcullis](#)

# syscall()

- int syscall(int number, ...);
- Kernel provided basic functions (usually)
- Not always kernel land e.g. QNX:
  - Uses MsgSendnc() to send to procmgr
  - We can send from user land
  - Could be a fun target for fuzzing?

Portcullis Computer Security Ltd – [www.portcullis-security.com](http://www.portcullis-security.com)

[/company/portcullis](#)

@portcullis

/PortcullisCSL

[gplus.to/portcullis](#)

# MY 1ST KERNEL BUG

- Consider the following:

```
int randomsyscall(int size, void *value) {  
    if (size > maxsize) size = maxsize;  
    void *a = kmalloc(size);  
    privop(a, size);  
    copytouser(a, value, size);  
    return SUCCESS;  
}
```

- What's wrong?

Portcullis Computer Security Ltd – [www.portcullis-security.com](http://www.portcullis-security.com)

[/company/portcullis](#)

@portcullis

/PortcullisCSL

[gplus.to/portcullis](#)

# MY 1ST KERNEL BUG

- How about now?

```
int randomsyscall(int size, void *value) {  
    if (size > maxsize) size = maxsize;  
    void *a = kmalloc(size);  
    privop(a, size);  
    copytouser(a, value, size);  
    return SUCCESS;  
}
```

- Signedness bug, impact DoS or disclosure

Portcullis Computer Security Ltd – [www.portcullis-security.com](http://www.portcullis-security.com)

[/company/portcullis](#)

@portcullis

/PortcullisCSL

[gplus.to/portcullis](#)

# CVE-2013-2171

- FreeBSD 9.0 vulnerability
- Not mine
- I wrote a PoC for it:
  - mmap() a read-only file
  - ptrace() yourself
  - Write to the location with  
PIO\_D\_WRITE\_D
- Missing permissions check, impact uid=0
- FreeBSD advisories are great for learning

Portcullis Computer Security Ltd – [www.portcullis-security.com](http://www.portcullis-security.com)

[/company/portcullis](#)

[@portcullis](#)

[/PortcullisCSL](#)

[gplus.to/portcullis](#)

# PoC

Portcullis Computer Security Ltd – [www.portcullis-security.com](http://www.portcullis-security.com)

[/company/portcullis](#)

@portcullis

/PortcullisCSL

[gplus.to/portcullis](#)

# ioctl()

- int ioctl(int fildes, int request, ... /\* arg \*/);
- Intended to allow device driver interaction
  - Tried my own fuzzer
  - Ported Ilja Van Sprundel's fuzzer
  - return(ENOBUGS)
- But AIX is terrible? Fuzz deeper, “The type of arg depends upon the particular control request, but it shall be either an integer or a pointer to a device-specific data structure.”

Portcullis Computer Security Ltd – [www.portcullis-security.com](http://www.portcullis-security.com)

[/company/portcullis](#)

@portcullis

/PortcullisCSL

[gplus.to/portcullis](#)

# IPC

- UNIX sockets
- Signals
- System V semaphores (sem\*)
- System V shared memory (shm\*)
- System V messages (msg\*)
- POSIX semaphores (sem\_\*)
- POSIX shared memory (shm\_\*)
- POSIX messages (mq\_\*)

Portcullis Computer Security Ltd – [www.portcullis-security.com](http://www.portcullis-security.com)

[/company/portcullis](#)

@portcullis

/PortcullisCSL

[gplus.to/portcullis](#)

# socket()

- int socket(int domain, int type, int protocol);
- Typically used for establishing TCP and UDP connections
  - There are domains e.g. AF\_UNIX
- Scan them with UNIXSocketScan
  - Utilises nmap and custom probes
  - Who knew CUPS supported HTTP over a UNIX socket?
  - How about Avahi's FUCK command?

# BUGS FOUND?

- 486 packages using shmget():
  - 89 cases of shmget() being called insecurely, to support X11 protocol (58 packages)
  - 212 other cases of shmget() being called insecurely (114 packages)
  - 80 cases of shmget() being called potentially insecurely, to support X11 (44 packages)
- Similar for semget(), shmctl() and semctl()

# MEMORY CORRUPTION?

- Write honoured on both AIX and Linux
- Execute honoured on neither AIX or Linux
  - Always executable on AIX, never on Linux
- ASLR on Linux when `randomize_va_space >= 1`
- Look in `/proc/<pid>/maps` for mappings such as `"/SYSV00000000 (deleted)"`

Portcullis Computer Security Ltd – [www.portcullis-security.com](http://www.portcullis-security.com)

[/company/portcullis](#)

@portcullis
