**1950**  
Dr. Walter Zumtobel  
founds "Elektrogeräte und  
Kunstharzpresswerk  
W. Zumtobel KG" in Dornbirn.

**1952**  
Manufacture begins of  
complete luminaires. The  
first successful range is  
Profilux, the "thinnest batten  
luminaire in the world".

**1957**  
Presentation of the first  
ballast with patented wire  
winding ("random wind-  
ing"), which becomes the  
industry's standard.

**1958**  
The build-up of the  
German sales organisation  
signals the access to foreign  
markets. Zumtobel KG  
exhibits its products at the  
Hanover trade fair.

**1959**  
The first Zumtobel lighting  
laboratory is started up.  
One of the first tasks is the  
creation of light distribution  
curves.

**1967**  
Debut of LightTrack, the  
first German track system  
developed by Staff & Schwarz  
Leuchtenwerke.

**1980**  
Introduction of the world's  
first luminaire range with  
indirect-direct distribution  
for office use.

## History of the company

The success story of the Zumtobel brand started more than sixty years ago with the founding of "Elektrogeräte- und Kunstharzpresswerk W. Zumtobel" in Dornbirn. A passion for the medium of light and outstanding entrepreneurship have enabled Zumtobel to become a leading global provider of sustainable and integral lighting solutions. Today Zumtobel supplies a wide range of product lines for a variety of professional interior lighting applications.

**1988**  
Debut of the concept of MELLOW LIGHT, a new lighting solution generation for office use.

**1991**  
Launch of the bus-compatible Luxmate® lighting management software.

**1993**  
Take-over of the majority of shares in the German lighting company of Staff founded in 1945. At the end of 1994, all staff shares were taken over.

**1999**  
First series production of a lighting solution incorporating LED technology, and "Active Light" for light in variable colours.

**2002**  
The LIGHT FIELDS range of luminaires introduces the micro-pyramidal optic for glare-free light at the workplace.

**2010**  
The PANOS infinity LED downlight range outdates conventional light sources in terms of efficiency, lighting quality and colour rendering.

**2014**  
Design and function form an inseparable whole in CRAFT. Never was a luminaire so powerful, so compact and so efficient.

**2016**  
NIGHTSIGHT – the well thought-out LED outdoor lighting system for architectural lighting.

- 1952 Proflux mounting rail, 1956 product brochure
- 1957 LXG ballast, developed by Ernst Wiesner
- 1967 Staff Lite-Trac lighting track system
- 1980 Redesign of the Department of Education of the Canton of Berne. Lighting design: Peter A. Balla
- 1988 RCA Mellow Light surface-mounted luminaire. Design: Karin Pesau
- 1999 Sir Alexander Fleming Building, Imperial College London. Architects: Foster and Partners; colour design: Per Arnoldi; lighting solution/ lighting management: Zumtobel Staff/Luxmate Controls
- 2002 LIGHT FIELDS detail
- 2010 PANOS infinity (cross section)
- 2014 CRAFT LED high-bay luminaire (cross section)

**ZUMTOBEL**

*“For more than 60 years it has been our  
ambition to create the best light for people  
and environment”*

### Zumtobel. The Light.

The Zumtobel brand stand for innovation, unique product and service quality and sophisticated design. Its knowledge about light and a profound understanding of its effects on people has at all times been the bedrock of the Zumtobel brand. Zumtobel brings lighting quality and energy efficiency into harmony and develops customised lighting solutions for measurable added value. Zumtobel addresses customer requirements and user needs in multifarious areas of application – always following its ambition of supplying the best light for people and the environment.

## Research and development

Thanks to close cooperation with international experts and scientific institutions, Zumtobel leads the field in lighting research. By implementing the latest results in scientific research, based on its unique practical expertise in applied knowledge and comprehensive technological know-how, Zumtobel is consistently pressing ahead with product innovations. In its constant endeavour to ensure the best light for the customer, Zumtobel is quick off the mark in observing and researching local and global trends for the development of future-oriented lighting solutions.

2012 iF Design Award GOLD, Design Plus by light+building

**Product design**

For Zumtobel, intelligent design means equal fulfilment of aesthetic and functional requirements. Numerous awards are evidence of these efforts. The Zumtobel product design team develops its products independently and in close cooperation with internationally renowned designers. The products excel in their maximum efficiency and subtlety of aesthetic design. Our approach to design is based on our profound knowledge of the application and use of light, while bearing in mind the continuous changes taking place in the working and living environment. Only then can light unfold all its effects and powers of expression.

## Quality

Products by Zumtobel fulfil the highest quality requirements, impress customers on account of their long service life and thus set standards in the industry. To secure the continual improvement of product and service quality, Zumtobel has implemented an uncompromising quality management system. This involved certifying all production locations in accordance with international standard ISO 9001. Over and above this, Zumtobel is one of the few companies in this sector that has accredited measuring laboratories at its disposal, ensuring that the development process operates at the highest level.

## CONSUMPTION OF ENERGY RESOURCES

### ONLITE PURESIGN Design by EOOS

#### 100% recycling

Manufactured without heavy metals, the NiMH battery can be 100% recycled and the wiring, too, is completely halogen-free.

#### Longevity

In order to guarantee constant average luminance for the LED's entire service life, PURESIGN features a built-in maintenance function, which starts operation at a dimming level of 70% and gradually increases it to 100%.

## Sustainability

Zumtobel is very much aware of its responsibility towards the environment. Zumtobel issues environmental product declarations (EPD) for all its products. The environmental impact of a product throughout its entire life cycle is therefore quickly and simply visualised for the customer. Moreover, EPD contribute greatly to the environmental certification of buildings. With the introduction of EPD, Zumtobel has adopted a pioneering role in supporting transparency and is emphasising its standards in terms of sustainable use of resources.

[zumtobel.com/sustainability](http://zumtobel.com/sustainability)

**Luminaire efficiency**

The highly efficient LEDs of the latest generation guarantee outstanding luminaire efficiency including a longer service life and lower maintenance and energy costs.

**Dual function**

The ERI spotlight (Escape Route Illumination) is an energy-efficient LED spot combined with a patented lens. It provides 40% of emergency lighting and makes additional emergency luminaires redundant.

**Sustainable product design**

Resource-saving production through digital printing and eco-friendly powder coating of the aluminium frame.

**Environmental product declaration (EPD)**

- Product-specific environmental data sheet
- Based on a life cycle assessment (LCA)
- Complies with relevant European standards
- Program operator: Institute Construction and Environment e.V. (IBU)
- Verified by independent IBU expert committee

European Core EPD

Institute Construction and Environment e.V.

**Cooper Union, New York | US**

LEED® certified, Platinum

Energy consumption reduced by 42%

CO<sub>2</sub> emissions reduced by 60 000 tonnes over a life cycle of 50 years.**Environmental certification**

Environmental certifications for buildings are enjoying great popularity, resulting in a fast-growing market with large volumes. Environmentally certified buildings – thanks to the latest construction measures, for example in air conditioning, light or room design – have been proven to have a positive effect on employees and thus a company's success\*.

# 1

## Sustainable products

### Life cycle of Zumtobel products

The Zumtobel life cycle assessment is based on the international ISO 14 040/44 standard. By means of this generally accepted and reliable tool, the environmental impact of a product is measured and assessed from production of raw materials through to recycling. The underlying principle: to analyse environmental impact already during generation, and to keep it as low as possible over the product's service life.

# 2

## Efficient lighting solutions

### Integral lighting solutions

The perfect combination of luminaire and control system results in a whole package of benefits. In addition to efficient luminaires, Zumtobel therefore provides useful lighting design tools and a variety of services to assist you on your way to a sustainable lighting solution.

# 3

## Detailed documentation

### For improved transparency

By supplying each product with an Environmental Product Declaration (EPD), we make a major contribution to helping you obtain successful certification of your building. An EPD is a material and environmental statement based on the ISO 14 025, ISO 14 040/44 and EN 15 804 standards (sustainability of buildings, environmental product declarations, basic rules for the Construction Products category). Each document is checked and verified by the independent Institute Construction and Environment e.V. (IBU). In this way, we provide the prerequisite for comparability of products, for transparency in terms of materials used, and for ongoing product improvement.

# Members of Zumtobel Group

## **zumtobel group**

*The Zumtobel Group is a leading global provider of lighting and related services. Our group of specialists deliver the right solution for the lighting needs of all of our customers.*

*With our internationally established brands Thorn, Tridonic and Zumtobel as well as acdc, Reiss and Zumtobel Group Services we offer a comprehensive range of products and services, combining our expertise in lighting infrastructures with that of leading technology partners to enable data-based services, connected buildings, cities and commerce.*

# Zumtobel Group Services

Your service partner in the lighting industry

## Turnkey Services

### Tailored lighting solutions from a single provider

COMPLETE enables you to combine any number of Zumtobel Group products and services into a single individual solution. This includes everything from specifications, planning and project management to installation and even maintenance, which is available on request. The only things that count are your specific wishes and requirements. ZGS then develops needs-based complete solutions from a single source – solutions that can be realised immediately anywhere in the world.

## Data-based Services

### New insights, enhanced customer satisfaction

Digital technologies are changing both the way we live and the way we use light. Our team of experts will help you understand your requirements when it comes to networked lighting, enabling optimal usage of existing infrastructure or complete buildings by incorporating features such as remote monitoring and room management. The Internet of Things is creating genuine added value that has spawned a range of new services and business models. Our integrated approach makes us a popular partner for leading technology companies, paving the way for a series of ground-breaking project initiatives in the field of connected buildings and cities.

## Emergency Lighting Systems

### Leading you to safety

Functional emergency lighting is much more than just a legal requirement. The quality of the luminaires and the power supply system reflect the responsibilities of the operator towards the building, the people and the environment. Our complete range of services includes safety luminaires, escape sign luminaires, self-contained and central battery systems and maintenance agreements.

## Finance Services

### Lights that pays for itself

NOW provides you with the very best light for your company – while you pay nothing but the running costs. You do not even need to worry about the installation of the luminaires or the commissioning and maintenance of the system. This is all taken care of by our experts, as you would expect when you choose a complete and cost-effective solution – a solution that harnesses the most efficient lighting on the market to minimise both energy consumption and operating costs.

## Connectivity Systems

### Intelligent systems put you in control

Our services cover everything from advice, commissioning and maintenance of lighting management systems right through to the intelligent use of existing infrastructure for new data-based services. The size and scale of our hardware and software solutions are completely flexible. We utilise simple and intuitive interfaces to enable versatile lighting controls at the push of a button, while at the same time helping cities to introduce sophisticated and efficient management of their lighting infrastructures.

## Technical & Maintenance Services

### Lifecycle management for your lighting

The technical services from ZGS start with professional commissioning of lighting systems and continue with maintenance, routine testing and regular optimisation. We offer you worldwide assistance - either on site or using remote analysis. Our expert support improves the quality of light, maximises energy efficiency and guarantees outstanding reliability. We can also call on years of experience to help train the personnel who work with the solution on a daily basis. In line with a commitment to tailor our services to suit your individual requirements, product guarantees can also be extended.

### Product portfolio

Zumtobel products signify light of perfect quality. They combine aesthetic grace, functionality and sustainability. The portfolio covers a range from high-quality spotlights and lighting systems, industrial and high-bay luminaires and façade lighting, to emergency lighting and lighting management systems. Zumtobel develops products for multifarious application areas, in a harmonious combination of lighting quality and efficiency based on state-of-the-art technology.

## ARCOS

Sensitivity and high precision –  
the spotlight system for sophisticated lighting scenarios

ARCOS LED spotlights cannot fail to impress thanks to their minimalist design: available as LED wallwashers and LED ceiling spotlights, the luminaires perfectly combine pinpoint accent lighting and widearea illumination. With this integral lighting solution, nothing diverts attention from the objects on display – quite the contrary: special focus is placed on the exhibits, and the effects they create are enhanced by lighting and architecture. A further development of the conventional model, the ARCOS LED version is available with a variety of accessories: thanks to sophisticated lighting technology,

ARCOS LED is able to set the most varied objects perfectly centre stage. The luminaire also takes conservational requirements into account, for its UV- and IR-free light is extremely gentle on exhibits. Moreover, the use of innovative LED technology results in a considerable reduction in energy consumption, compared to the conventional generation. Despite all modifications, the popular purist design of the ARCOS spotlight has remained unchanged – as has its high level of flexibility.

## IYON

Maximum LED efficiency in a sophisticated design

The design aspects of IYON suggest constant movement and liveliness as an interpretation of infinite mutability. The fluid interaction between object and medium conveys sensuality and a high level of functionality. Variable lighting scenes and targeted spatial positioning go hand in hand with the way in which the light source continuously transforms itself. Velvety-matt surfaces and a sophisticated design

hint at the function-focused, individually controllable lighting technology incorporated in this highly versatile spotlight.

*"The symbiosis of light direction and proportion as parameters of design affects people's sensory perception and at the same time determines the physiological sensation of a room's quality."*

## DISCUS

### Spotlight system

State-of-the-art light sources inspire new peaks of performance and this is especially true of the DISCUS spotlight system. Its delicate but robust design is creatively inspired by cutting-edge LED technology: a flat, minimalist shape with an unmistakable appearance – characterised by the radial fins of the passive heatsink and its illuminated replaceable optic. It fulfils the exacting demands made on sales-promoting accent lighting with dependable accuracy and extremely good colour rendering (Ra 92). The new DISCUS

LED-generation evolution achieves double the luminous flux and efficiency of its predecessor. The luminaire is dimmed on the actual spotlight itself or by DALI control commands, both these methods have a positive impact on energy consumption. The product range is rounded out by track-mounted models and recessed spotlights that blend unobtrusively into any interior design.

## VIVO

The flexible versatility of light:  
spotlight system with LED technology

Professional lighting is gentle on sensitive goods and also boosts sales. LED luminaires achieve the same lighting quality as metal halide lamps but produce less IR and UV radiation. VIVO LED spotlights stand out thanks to their high colour rendering index and extremely uniform light distribution. For every lighting concept, the right light colours, colour temperatures and illuminance levels are available. Unique PiLED technology, pre-programmed colour points and premium

lens systems pave the way for implementing exclusive solutions. "The quest for intuitive images characterises the way in which EOOS works. VIVO blends the archetypal cylindrical shape of a spotlight with design details inspired by reinterpreting a turbine. Effective airflow management, which is especially important for LED technology, actually becomes an unobtrusive but significant design feature."

*Design: EOOS*

## VIVO

### Spotlight system

#### VIVO XS LED

LED spotlight with reduced dimensions and passive cooling. Due to excellent colour rendering, adequate alternative to conventional solutions using LV halogen lamps.

#### VIVO M LED

Compact, dimmable spotlight with passive cooling that is able to impress thanks to its efficiency, good glare control and excellent colour rendering. Perfect alternative to conventional systems using 35 W metal halide lamps.

#### VIVO L LED

High-output spotlight with passive cooling that boasts high luminous flux levels, excellent colour rendering and variable light colours. Innovative alternative to solutions using 35 W to 50 W metal halide lamps.

#### VIVO-P L LED

Alternative cylindrical design version.

#### VIVO-SL LED

## ONICO

Luminaire family for configuring individual lighting solutions in a consistently clear design

### Variable lighting tools in a uniform design

Regardless of whether track, ceiling-recessed or pendant – with ONICO, it's easy to design technically consistent lighting solutions for retail areas with suspended or closed ceilings. Thanks to simple styling and through integrated operating units, these concepts are also suitable for global application. LED modules and reflectors are selected simply according to the required light properties from the modular design. Special designs in customised colours open up additional possibilities for personalisation.

*“ONICO emerged from a passion for technology and design. The unique product family gives every designer the freedom to shape their own range of luminaires with suitable LED light sources and high-performance reflectors. By adjusting the beam angle and luminous flux, perfection can be achieved in all applications. Clear and focused shapes enable the luminaires to discreetly act in diverse environments – with the possibility to subtly illuminate the surroundings. ONICO serves a diverse number of markets, among them sales, and presents itself as a versatile lighting tool for designers who want to consistently surpass expectations.”*

*Design: LAPD lighting design,  
Steve Dean and Glenn Campion*

## ONICO

Uniform variety

### LED spotlight

#### ONICO M

Compact, passively cooled LED spotlight with integrated converter: Excellent efficiency, glare suppression and colour rendering distinguish ONICO M as the perfect alternative to conventional lighting systems with 20 W metal halide lamps.

#### ONICO L

Efficient, passively cooled LED spotlight with integrated converter: The high luminous flux, best colour rendering and variable light colour define ONICO L as an innovative alternative to lighting solutions with 35 W – 50 W metal halide lamps.

### LED recessed spotlight

#### ONICO-S M

Compact, passively cooled LED recessed spotlight with innovative tilt action: Replaces conventional systems with 20 W metal halide lamps.

#### ONICO-S L

Efficient, passively cooled LED recessed spotlight with innovative tilt action: contemporary alternative to lighting solutions with 35 W – 50 W metal halide lamps.

### Pendant luminaires

#### ONICO M pendant

Compact, passively cooled pendant luminaire with integrated converter: Special features include the clear shape and the possibility to subtly illuminate surroundings. Replaces conventional systems with 20 W metal halide lamps.

#### ONICO L pendant

Efficient, passively cooled pendant luminaire with integrated converter: Straight, discreetly bright alternative to lighting systems with 35 W to 50 W metal halide lamps.

## ***FACTOR***

### LED spotlight

Zumtobel has added FACTOR, a modular LED spotlight, to its product range for shops and retail areas. FACTOR combines reduced complexity with great lighting quality and is available in two design versions: its conical and cylindrical housing provides plenty of creative scope for implementing retail lighting solutions. It is installed on a 3-phase track or via TECTON, thus ensuring flexibility:

if the shop design needs to be modified, the FACTOR spotlights can easily be repositioned. FACTOR is optionally available in a warm (3000 K), intermediate (4000 K) colour temperature or as TGRfood version to ensure a presentation that matches specific merchandise.

## ***CARDAN LED***

### The lighting power pack

Fitted with the latest LED modules, the high-performance (2200–5000 lm) and highly efficient (up to 117 lm/W) CARDAN LED luminaire range. Intelligently differentiated performance packages (24–60 W) allow precise adjustment to a wide variety of requirements. The unobtrusive mounting frame in a contemporary design is made of high-quality

die-cast aluminium and stable sheet steel, holding an LED lighting head including a passive high-performance heat sink and swivelling continuously through up to  $\pm 30^\circ$ . No fixing wheel is required due to the self-decelerating design. The springs can be easily operated and allow for quick no-tool installation.

#### Individual luminaires instead of light lines

Even lighting does not require a continuous light source. Thanks to KATALYST, individual luminaires arranged 3.5 metres apart are sufficient to homogeneously light up shelves with directed light and maximum brilliance.

#### Flexible height and width

KATALYST performs precision work because there is a perfect solution for all common mounting heights and aisle widths. The highest illuminance is at eye-level, which is usually 1.6 metres.

#### Combine with spotlights

Mounted in three phases or on TECTON tracks, KATALYST general lighting can be extended at any time with spotlights positioned as desired. The result is an attractive combination of brilliant general light and selective accents.

## *KATALYST*

Spotlight for vertical surfaces

By lighting up shelves with even, vertical light, merchandise receives all the attention that each individual product deserves. KATALYST combines top homogeneity with unique brilliance – as only directed light can provide. The alternative to the light line is therefore established.

### **Shopping in a brilliant lighting atmosphere**

Supermarket lighting is based on a diverse range of tasks, which the KATALYST handles perfectly. The individually selectable and adjustable components open up different ways to set the scene for your product – enhanced by combination options with spotlights. Since the highest illuminance is at eye level, the customer's attention instinctively goes in the desired direction. The hidden, highly-efficient LED provides bright light and excellent glare control, whereby the spotlight offers many advantages for vertical surfaces compared to traditional light lines.

## Tracks

### Ordering details for curved tracks (standard section)

The minimum bend radius is 1000 mm. Bending in any direction is possible. The following information is required in addition to type of track and colour:

Angle of bend (arc of circle)

- Circle segment with specified angle
- Minimum bend radius 1000 mm
- The outside is always the reference side when measuring the bend radius
- Special shapes can only be bent using 1:1 templates

DALI tracks can also be bent.

Spotlights with *track box adapter*, e.g. VIVO models, cannot be installed in curved tracks.

Possible bending directions with manufacturing tolerances are patterned on DIN ISO 2768

### Structure of a track

Depending on the adapters and electrical feeds used, the 3-phase track can be used both as a conventional and as a DALI track.

Cable 1 can be used as phase or DALI control line

Cable 2 can be used as phase or DALI control line

Cable 3 used as phase

## *SUPERSYSTEM II*

High-quality, miniaturised lighting system for expert solutions to tricky lighting problems

The second generation multi-functional SUPERSYSTEM II lighting tool continues the success story: sophisticated design, elegant materiality, and stringent miniaturisation brought together in a flexible system using efficient LED technology. The slim, extruded rail profile, combined with a wide choice of easy to install lighting inserts, covers all demanding lighting tasks and maximises light quality. SUPERSYSTEM II fulfils the various

demands made on lighting, not just in shops and retail or museums and galleries, but also in hotels and restaurants, conference rooms, or in the private sector where high quality, elegance and functionality are in harmony with the Zeitgeist. Ideal for general lighting, accent lighting and for wall washing, SUPERSYSTEM II offers a solid base of uniform styling for a coordinated lighting solution in any space.

## SUPERSYSTEM II

Accent lighting made to measure

SUPERSYSTEM II LED mini wallwasher

SUPERSYSTEM II LED mini spotlight

LEDs offer great opportunities to consistently miniaturise luminaires. SUPERSYSTEM II opens up this potential even further by concealing the driver units into the extruded rail or behind the suspended ceiling. The minimalist LED spotlight can now fully show off its elegance. This is particularly true when combined with the sleek rail profile, the dimensions of which have also been reduced to a minimum. The result is an LED lighting tool which is distinguished by absolute design simplicity combined with high impact lighting quality. The variety of lighting inserts with multiple task-specific lighting characteristics help solve any lighting problem.

SUPERSYSTEM II LED midi spotlight

SUPERSYSTEM II LED maxi spotlight

SUPERSYSTEM II LED midi framing spotlight

**LED downlight and built-in spotlight**

In addition to the benefits of a track spotlight – from the flexible orientation to the high lighting quality, to the application-specific illuminance – the built-in spotlight also scores points for its reduced ceiling appearance. Depending on the different varieties of casing, the spotlight has

a wide movement range and can be completely tilted inwards and outwards. Three spotlight sizes, as well as assembly options with and without a frame, ensure that this lighting tool has perfect creative freedom, covering a wide spectrum of areas of use.

## SUPERSYSTEM

### Modular LED lighting system

Thanks to its extremely pared-down and timeless design, SUPERSYSTEM unobtrusively enhances architectural structures and interior design, always presenting a high-quality impression. Thanks to a number of extensions and consistent implementation of cutting-edge LED technology, SUPERSYSTEM is now able to fulfil complex lighting tasks even more efficiently. Warm white colour temperatures are ideal for creating pleasant, relaxing lighting scenes. Zumtobel now meets the demand with a colour temperature of 2700 K. In addition, the successful mini-downlight is now also available in an extra-slim version: the fixed

lighting head is installed flush with the ceiling and is recommended wherever maximum unobtrusiveness is required.

In order to allow more freedom of design, an additional section type was introduced: the Height-Extended section. In comparison with the existing H section, it allows more space for cabling and thus facilitates addressing of several different phases. The extended SUPERSYSTEM product range allows for more facets to general lighting as well. Thanks to consistent further development of lighting technology, seamless LED light lines with direct and indirect light distribution can now

also be implemented using SUPERSYSTEM. If the lighting task requires a particularly high extent of glare control, a narrow light line with sophisticated lens technology is now available for insertion into the SUPERSYSTEM sections. A linear LED wallwasher has also been added to the portfolio for the "Museum, Art and Culture" application area, which is able to illuminate vertical surfaces in an especially uniform manner thanks to a unique reflector/lens combination.

INTRO liteCarve® | 53 W

**liteCarve®**  
**Reflector technology incorporated in the**  
**INTRO system**

The freeform reflector provides highly precise and balanced light distribution, right up to the peripheries. The reflector is fitted in front of an LED point light source and directs the light, 100% indirectly, onto the vertical surfaces in a targeted manner. This means that not only displays can be illuminated uniformly and efficiently but also shelves, large-format posters, recesses or wall areas that need to be highlighted. As a track-mounted version, the liteCarve® spotlight provides additional flexibility due to the lighting head that can be pivoted downwards through 40°.

INTRO liteCarve®  
 installed on track

## INTRO

### Modular LED lighting system

Designed to impressively set any store centre stage and perform a wide variety of lighting tasks, the INTRO lighting system includes four luminaire models in a consistent design: INTRO M and INTRO S for light that creates accents. INTRO PANOS infinity for light that efficiently provides brightness in the room. INTRO lite-Carve® for light that not only ensures uniform illumination to vertical surfaces but also produces a rectangular lighting cone. The luminaire range is completed by INTRO

RESCLITE emergency luminaires for use in emergencies. Despite the consistent design and variety of technical lighting features, every INTRO lighting solution provides maximum creative design scope: the components – mounting frame, lighting insert through to front ring – can be assembled individually. In this way, variability and flexibility meet at the highest level.

*Design: Chris Redfern, Sottsass Associati*

## *MICROTOOLS*

Impressive lighting within minimum space

High-quality finish and hardly visible at all: the MICROTOOLS LED system was specifically developed for shelves with boards made of wood, glass or metal. Modules for general and accent lighting are flexibly combined, the choice is between warm and intermediate colour temperatures. The extremely compact gimbal-mounted lighting heads are the smallest currently available on the market for

shelf lighting and emphasise the sophisticated technology even further. With its excellent colour rendering index of  $Ra > 90$ , the MICROTOOLS system is also ideal for museums to gently illuminate exhibits from short distances. Compared to conventional lighting systems, an outstanding luminaire efficiency of up to 82 lm/W helps to significantly cut energy consumption.

## ***2LIGHT MINI LED***

Downlights with unique lighting characteristics

The complete range of 2LIGHT MINI downlights is now even more powerful: latest-generation LED technology creates a brilliant lighting atmosphere as desired in hotels, wellness areas and private homes.

This is possible thanks to excellent colour rendering of  $R_a > 90$  as well as optics that combine accent lighting with diffuse light

distribution. Colour temperatures of 2700 K, 3000 K and 4000 K as well as spot, flood and wideflood beam patterns ensure that any lighting task can be performed with utmost precision.

## *PANOS infinity and PANOS evolution*

LED downlight ranges

### **Highest luminaire efficiency**

With a luminaire efficiency of up to 120 lm/W, PANOS infinity and PANOS evolution have again set new standards on the market. This is achieved through the use of innovative LED multichannel technologies and other high-grade components that are combined within the optical luminaire system.

### **Powerful lumen packages**

With a luminaire luminous flux of 800, 1000, 1800, 2400, 5000 up to 7400 lumens, both the PANOS infinity product range and the PANOS evolution product range cover all typical downlight applications. Thus the two ranges are recommended as economically efficient alternatives in all application areas where single- or twin-lamp downlights fitted with 18 W, 26 W or 32 W compact fluorescent lamps used to be installed.

### **Dimming or switching**

The standard version of PANOS infinity is dimmable via DALI, which opens up great potential for further energy savings: Intelligently controlled lighting solutions reduce power consumption by 70 per cent. PANOS evolution offers a switchable 230 V converter as standard, but is optionally also available with DALI control gear.

*Design: Chris Redfern, Sottsass Associati*

## *PANOS infinity and PANOS evolution*

Continuous product lines worldwide  
for all architectural applications

With its wide range of models, the PANOS infinity product group meets the challenges of various applications with brilliance – from homogeneous illumination of vertical or horizontal surfaces to emphasising highlights. Thanks to the formal reserve with which both downlights and wallwashers blend into their architectural surroundings, PANOS infinity is the perfect lighting tool for designers and planners.

The range of potential applications is endless: reception areas or corridors, offices, conference rooms, shops or museums – the luminaires create the right lighting effect in any environment, satisfying every standard and guaranteeing the highest level of system efficiency.

## ***CREDOS***

Compact, simple, economically efficient

This compact LED downlight combines efficiency and functionality with an attractive appearance. By using latest-generation LEDs, CREDOS achieves the same levels of performance as downlights fitted with compact fluorescent lamps up to 2/32 W – but uses minimal energy. With dimmable lumen packages of 1000, 2000 and 2600 lumens, CREDOS provides pleasant and uniform general lighting in public buildings, offices, hotels and wellness areas, as well as in shops and department stores. In closed ceilings, the downlight offers

IP44 protection and can therefore be used in areas where there are requirements for extra protection. Another plus point: CREDOS has a service life of 50 000 hours with a decline in luminous flux of no more than 20 % and is therefore also specially recommended for areas where there are very extended operating hours. This durability is based on an innovative aluminium housing with a design that combines passive thermal management with compact dimensions.

## *MICROS LED*

Ideal alternative to low-voltage halogen lamps

Users reap all the benefits of the long service life of compact LED modules in decorative accent lighting applications in particular. Due to high energy efficiency and a low installed load, it is applications with long operating hours, e.g. in hotels and wellness areas, in particular which benefit from the short amortisation periods of usually less than

two years. Depending on the control gear installed, Micro LED luminaires are switchable or dimmable via DALI, 1–10 V or PushDIM. Another plus: luminaires with a colour temperature of 3000 K and 4000 K offer the opportunity to make exactly the right choice for various surfaces and materials.

## *DIAMO*

### LED downlight and spotlight

DIAMO, which incorporates unique lighting technology developed jointly with experts at Bartenbach GmbH, based in Aldrans near Innsbruck, is a highlight in the world of miniaturised recessed luminaires and spotlights: intelligently designed reflectors ensure accurate light distribution by the high-power LED modules, without any spill light, as well as perfect glare control. The result: high-intensity pinpoint accent lighting with excellent lighting quality and maximum brilliance. DIAMO combines all these features in an extremely compact design, thus providing for new creative

freedom in numerous indoor applications. DIAMO is a real diamond among LED downlights, enhancing both prestigious and functional areas in offices, setting goods in shops and retail areas brilliantly and powerfully centre stage, as it is ideally suited for use in hotels – from reception areas to hotel rooms. DIAMO covers this wealth of lighting tasks as a downlight with four different distribution characteristics according to the respective application, and as a spotlight. DIAMO is available in intermediate or warm light colours as well as switchable and dimmable models.

- 104 **SLOTLIGHT infinity**

Thanks to continuously adjustable colour temperatures ranging from 3000 K to 6000 K, LIGHT FIELDS evolution tunableWhite is perfectly tailored to users' individual requirements and biological needs – with technical perfection, as the illuminance level remains constant even with changing colour temperatures.

**Biological lighting effects**  
**LIGHT FIELDS evolution tunableWhite**

A user study on lighting quality perceived in offices conducted jointly with Fraunhofer IAO shows that users' preferences with respect to colour temperature differ strongly. Usually, colour temperatures between 3000 K and 6000 K are perceived as ideal, with a clear preference for 4000 K and 5000 K. Another result of the study is that office users rate their situation at work significantly higher where it is possible for them to adjust the lighting to their individual needs. Since synchronisation of people's inner clock through daylight is not ensured indoors during the dark months of winter, DIN SPEC 67600:201304

also includes specific design recommendations for biologically effective lighting. In this case, artificial lighting solutions incorporating wide-area panels emitting diffuse light such as LIGHT FIELDS evolution tunableWhite combined with lighting management are vital for supporting daytime activities and ensuring a good night's sleep.

Thanks to the LITECOM lighting management system and therefore continuously adjustable colour temperatures ranging from 3000 K to 6000 K, LIGHT FIELDS evolution tunableWhite is perfectly

tailored to the users' individual needs and biological requirements – with technical perfection, as the illuminance level remains constant even with changing colour temperatures.

## *LIGHT FIELDS evolution*

Complete range of LED luminaires  
for integral office lighting

The name LIGHT FIELDS evolution says it all: the luminaire is entirely dedicated to progress and further development. The design is minimalist and consistently uniform for all models. LIGHT FIELDS evolution is impressive not only in visual terms but also in terms of technical features: the luminaire is fitted with innovative technologies and always provides

perfect, glare-free light. At the same time, it is efficient and flexible: qualities by which the new generation stands out as contemporary office lighting system that provides perfect lighting conditions for many situations.

*Design: Chris Redfern, Sottsass Associati*

## LIGHT FIELDS evolution

### Recessed LED luminaires

As a recessed luminaire, LIGHT FIELDS evolution provides maximum efficiency of up to 134 lm/W, effectively reducing the energy consumption of an office building. Moreover, using a concealed housing it can be installed flush in plasterboard or modular ceilings, ensuring maximum integration into the inte-

rior design. The only thing that remains visible is a 8 millimetres wide, high-grade aluminium frame, which also marks the edges of the luminaire. The luminaire is available in four designs and as a "High Efficiency" and a "High Output" model, flexibly illuminating a variety of different rooms and room situations.

Recessed luminaires featuring backlit lighting technology for max. efficiency

**3Dprotect® reflector**

The 3Dprotect® technology (patent pending) is both protector and reflector at the same time. Its three-dimensional structure protects the LED modules during installation or maintenance and prevents damage from electrostatic discharge. At the same time, the structure's high reflection factor ensures an increase in the luminaire efficiency level.

**MELLOW LIGHT infinity**

## *MELLOW LIGHT evolution / infinity*

Recessed LED luminaire

### **MELLOW LIGHT evolution**

A sky for the office: the brightness is distributed gently and uniformly throughout the room. The well-balanced illumination of the work surface, wall and ceiling creates an open, bright atmosphere in the room and helps prevent glare and irritating shadows. The perfectly dispersed LED points remain invisible.

### **MELLOW LIGHT infinity**

The lighting can be adjusted flexibly to suit different needs and situations thanks to separately controllable light channels. The two lighting wings create a pleasant background brightness to give the room an inviting atmosphere. Switching on the direct light component in the middle supplies the work surface with perfectly targeted light.

*Design: Daniel Stromborg,  
Practice Area Leader, Gensler*

## MELLOW LIGHT evolution / infinity

The daylight classic

### Recessed luminaire

#### Crystal optic

This re-interpretation of the classic lens optic guarantees glare-free illumination with up to 4800 lumens. This makes it ideal for areas that require more than 500 lux or where there are greater distances between the luminaires. The contrast with the diffuse lighting wings also creates some impressive lighting effects.

#### Lenticular optic

Prism louvres create a gentle and homogeneous appearance while offering excellent glare suppression with up to 3500 lumens. The UGR < 19 classification, this complies with the applicable standards for DSE workstations.

## *MIREL evolution*

Recessed LED luminaire with lens optic or opal optic

MIREL evolution creates perfect lighting conditions for the most varied visual tasks in offices while meeting all relevant standards. When it comes to luminaire efficiency, it is exemplary, too and ensures short payback periods. Light distribution is effected via the lenses at a rate of 95 percent; only 5 per cent are accounted for by the reflections from the lighting chamber.

### **Opal with 3Dprotect® reflector**

Following up on the character of the lens luminaire, the opal variant of MIREL evolution continues the family concept. Square luminaires and linear luminaires position themselves as attractive lighting solutions for corridors and side rooms through quality and price. Additionally, MIREL opal luminaires with small lumen packages are ideally suited for offices and educational facilities.

Thanks to the great variety of versions available, MIREL evolution may also be used as an emergency luminaire with separate battery supply, for instance.

## *MIREL evolution modular*

### Fully customised recessed modules

Due to the variety of design options, C-strip grid and T-beam ceilings in public buildings, offices or shopping malls are still highly popular. MIREL evolution is a custom-fit refurbishment solution that provides ideal prerequisites for keeping the costs required for refurbishment of the lighting system as low as possible for the customer. The modular platform for MIREL lens luminaires includes both square

versions and linear luminaires for flush mounting. Another benefit: individually designed versions of the custom-fit recessed luminaires can also be installed in closed ceilings. MIREL evolution modular thus extends the variety of application options for the MIREL luminaire range, providing high-quality lighting solutions in a uniform design.

#### Stimulation in the morning

Colour temperature: 5000 K

$E_h^*$  (daylight and artificial lighting): higher than 500 lx

Aim: synchronising people's circadian rhythm, complete suppression of melatonin release

#### During the day at sunshine

Colour temperature: 4000 K

$E_h^*$  (daylight and artificial lighting): higher than 1000 lx

Aim: enhancing people's well-being through well-matched colour temperature, accordingly warmer light colours during sunshine

#### During the day with cloudy sky

Colour temperature: 6000 K

$E_h^*$  (daylight and artificial lighting): higher than 800 lx

Aim: enhancing people's well-being through well-matched colour temperature, accordingly cooler light colours with overcast sky

#### Getting ready for sleep

Colour temperature: 3000 K

$E_h^*$  (daylight and artificial lighting): higher than 500 lx

Aim: synchronising people's circadian rhythm, no interference with melatonin release, restful sleep

\*  $E_h$  = horizontal illuminance

#### Biological lighting effects

##### SLOTLIGHT infinity tunableWhite

A user study on lighting quality perceived in offices conducted jointly with Fraunhofer IAO shows that users' preferences with respect to colour temperature differ strongly. Usually, colour temperatures between 3000 K and 6000 K are perceived as ideal, with a clear preference for 4000 K and 5000 K. Another result of the study is that office users rate their situation at work significantly higher where it is possible for them to adjust the lighting to their individual needs. Since synchronisation of people's inner clock through daylight is not ensured indoors during the dark months of winter, DIN SPEC 67600:201304

also includes specific design recommendations for biologically effective lighting. In this case, artificial lighting solutions incorporating wide-area panels emitting diffuse light such as SLOTLIGHT infinity tunableWhite combined with lighting management are vital for supporting daytime activities and ensuring a good night's sleep.

Thanks to the LITECOM lighting management system and therefore continuously adjustable colour temperatures ranging from 3000 K to 6000 K, SLOTLIGHT infinity tunableWhite is perfectly tailored

to the users' individual needs and biological requirements – with technical perfection, as the illuminance level remains constant even with changing colour temperatures.

[zumtobel.com/study-office](http://zumtobel.com/study-office)

## *SLOTLIGHT infinity*

The world's first consistent light line complies with the highest architectural and technical lighting requirements

It has never been so easy to create the perfect shadow gap along a luminaire, for SLOTLIGHT infinity has been designed from scratch as a continuous light line for flush mounting with the ceiling. Any drywall builder will be perfectly familiar with the materials and methods that ensure a perfect transition between ceiling and luminaire. The luminaire's linear design is continued in a precisely defined shadow gap. Problems with the formation of cracks are now a thing of the past as well, as the luminaire is technically

and thermally separated from the ceiling by a mounting frame. The final result is a high-grade lighting solution meticulously integrated into the interior design, which appears as a fully consistent light line to the beholder. With SLOTLIGHT infinity, Zumtobel provides architects and designers with a tool for consistently linear design with high precision. Light is now available as a continuous light line: nearly endless, up to 50 metres in length, without any butt joints and with uniform illumination even around corners.

## SLOTLIGHT infinity

The entire spectrum of light

UGR < 25

### Opal cover

The diffuse distribution lens distinguishes a SLOTLIGHT infinity as a simple and efficient light line with an homogeneous appearance. The application area ranges from reception areas, to corridors, to lounge areas and break-out zones.

UGR < 19 and L65 < 3000 cd/m<sup>2</sup>

### Cover for the office

With this cover, SLOTLIGHT infinity reduces the glare to UGR < 19 and thus ensures workplace lighting in accordance with EN12464:2011. The brilliantly appearing luminaire is ideal for offices, schools and meeting rooms.

### Decorative wall washer

The asymmetric distribution of the SLOTLIGHT infinity illuminates vertical wall areas or pictures evenly and, as a result, enhances traffic zones, for example. As the reflector is inside the luminaire, the wall washer is not recognisable as such from the outside.

### Wall washer for school blackboards

Matched to the common blackboard formats and the highly visual tasks in a school, a 3m or 4m long SLOTLIGHT infinity wall washer illuminates the vertical blackboard surfaces with 500 lx and a uniformity of 0.7 in compliance with the standards. In doing so, the uniform appearance is not disrupted by protruding components.

The optic of SLOTLIGHT infinity is supplied as a continuous 50-metre diffuser roll – for easy installation of a continuous LED light line by one person only.

### Installation aid for LED light line

The installation aid for SLOTLIGHT infinity focuses on consistently precise linearity. It greatly facilitates the installation of SLOTLIGHT infinity in ceilings and walls, even where the luminaires are installed in concrete.

## VAERO

### Perfect purism

Fascinated by the idea of total reduction, a luminaire was created that only draws attention when it is switched on. VAERO is more light than luminaire. Its design language – streamlined and clear in the true sense of the word – discreetly integrates into any room architecture, making it the ideal choice for various office areas – from the classic workplace environment to the creative communication zone.

Never before has a luminaire been simultaneously so effective and so inconspicuous. When switched off, the transparent lighting wings are hardly detectable. All that remains is a narrow middle bar, which conceals the flat converter box. This helps rid the ceiling of distracting elements.

When switched on, the pendant luminaire transforms into a magical light object – as if VAERO is no longer a light fitting, but quite simply pure light. Frameless and transparent, the super-thin light-emitting surface perfects the puristic design.

## AERO II LED

### A design masterstroke

AERO II writes a new chapter in the history of lighting technology. Being a hybrid model, it was the first luminaire to interactively combine LED and fluorescent lamp. The 100 % LED version goes even further by exploiting the LED's potential not only for direct lighting, but also for indirect lighting. In terms of design and lighting technology, the AERO II LED is based on the classic AERO luminaire

by Ettore Sottsass. Its high-quality waveguide technology with micro-pyramidal optic set new standards in lighting quality. By integrating LEDs in a consistent design concept, efficiency and quality have now been combined at the highest level.

*Design: Sottsass Associati*

## *LIGHT FIELDS evolution*

Complete range of LED luminaires for integral office lighting

The name LIGHT FIELDS evolution says it all: the luminaire is entirely dedicated to progress and further development. The design is minimalist and consistently uniform for all models. LIGHT FIELDS evolution is impressive not only in visual terms but also in terms of technical features: the luminaire is fitted with innovative technologies and always provides

perfect, glare-free light. At the same time, it is efficient and flexible: qualities by which the new generation stands out as contemporary office lighting system that provides perfect lighting conditions for many situations.

*Design: Chris Redfern, Sottsass Associati*

## LIGHT FIELDS evolution

### Surface-mounted and pendant luminaire

Structural conditions in offices, for instance low ceiling heights, frequently pose a challenge to lighting. Where neither pendant nor recessed luminaires are an option, the problem is solved reliably by surface-mounted luminaires: thanks to innovative litePrint® waveguide technology (patent pending), the surface-mounted luminaire provides a clear, uncluttered appearance, with a visible height of only 28 millimetres\*. An additional indirect light\*\* component of 5 percent creates a pleasant lighting corona, making the surface-

mounted luminaire appear to float below a cushion of light.

Suspended from the ceiling, the LIGHT FIELDS evolution pendant luminaire cannot fail to impress on account of the perfect interplay of indirect and direct light. Its large direct light component of 80 percent provides sufficient vertical illumination while significantly reducing energy consumption. Its indirect light component of 20 percent ensures perfect quality: the ceiling is brightened up pleasantly,

the gentle transition between the luminaire and the background providing good ergonomic compatibility. The light source, which is fitted with innovative litePrint® waveguide technology (patent pending), remains concealed despite its minimum height and delicate frame. This means that the high luminance of the individual LED lighting points is resolved perfectly. Featuring a slim-line, minimalist unit made of high-grade aluminium, the pendant luminaire can be easily integrated into contemporary office interiors.

\* total height of luminaire: 56 mm

## *ECOOS*

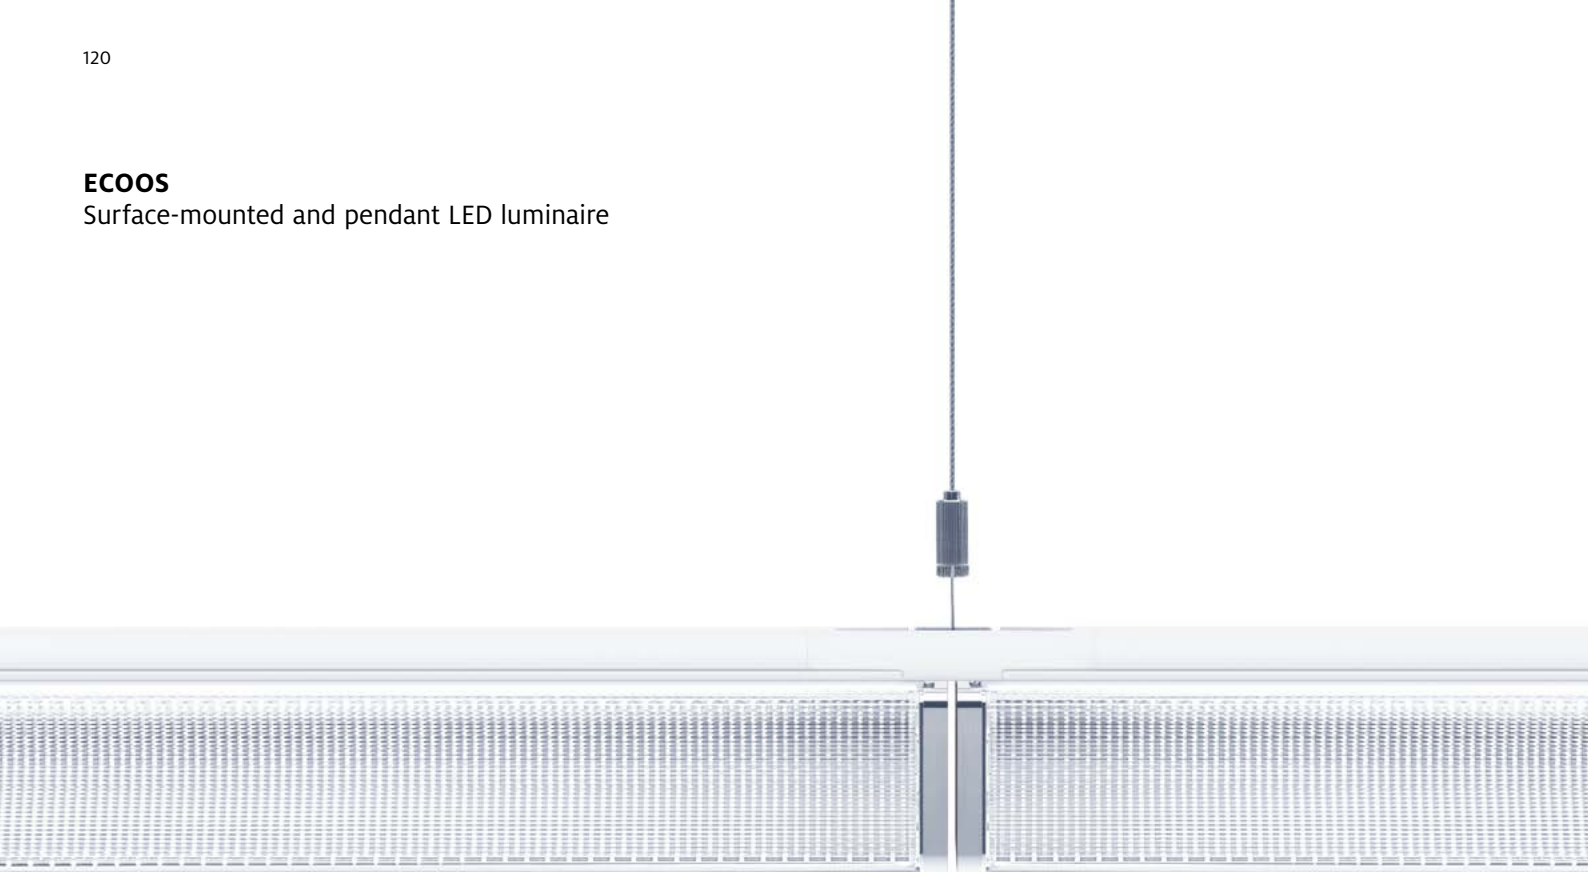

Individual luminaire and continuous-row system – 360° light

This luminaire is right up with the times. ECOOS's rounded corners team consistent straight lines with soft contours. It embodies an equally sophisticated interplay of features and materials. The textured surfaces of the luminaire unit are attractively finished off by shiny chrome end caps. The MPO+ micro-pyramidal optic and perforated lateral reflectors make the luminaire sparkle like crystal. ECOOS has a brilliant look which enhances both workspaces and communication areas alike. It achieves this through the effect of

light and the vista it produces. ECOOS is economically efficient and environmentally compatible – it provides all-round 360 degree light using just one light source and fulfils a wide range of tasks. For working, for relaxing and for a pleasant room effect. It has a versatile range of uses. Office buildings and educational establishments are just two application areas where ECOOS meets both technical lighting and maintenance requirements with maximum economic efficiency.

### ECOOS

Surface-mounted and pendant LED luminaire

ECOOS continuous row system with connector

Excellent light output ratios and a large direct component make the ECOOS LED luminaire one of the most efficient indirect/direct luminaires available on the market. Its complex system of optics and reflectors is highly effective. It delivers light which fulfils specific tasks in every respect. Indirect, direct and lateral light components ensure efficient task area lighting and also allow vertical illuminance

levels. These improve visual comfort and concentration, while bright ceilings and walls create a pleasant atmosphere.

Defined light emission with  $L < 3000 \text{ cd/m}^2$  at  $65^\circ$  and  $UGR < 19$  is achieved by guiding the direct component through multiple layers via the MPO+ micro-pyramidal optic, diffuser film and reflectors.

**MPO+**, Zumtobel's unique micro-pyramidal optic: outstanding glare control enables luminaires to be arranged freely, parallel or vertical relative to window frontage, and even directly above workstations.

**Indirect light component**, wide-angle distribution: even with the minimum pendant length of 35 cm, the diffuser-pearl enclosure ensures uniform ceiling illumination.

ECOOS LED

Mainly direct distribution characteristics (ID/DI – 1:3 ratio) combined with the luminaire's high operating efficiency of 90% provide particularly energy-efficient lighting solutions. The balanced indirect component visually brightens up the room, creating a pleasant atmosphere.

## ONDARIA

Beautifully recreating nature:  
comfortably soft light from a wide-area light source

Diffused wide-area lighting enhances people's sense of well-being and makes rooms appear larger and wider. ONDARIA relies on homogeneous illumination, which makes the luminaire almost seem like a skylight. In addition, its circular design allows fully flexible positioning in the room. An unobtrusive indirect component that brightens up the ceiling enhances the luminaire's low-profile design, so that it seems to float in the room. The luminaire can easily be installed without being opened. The small and medium versions of the opal lumi-

naire can also be mounted on the wall. This allows ONDARIA to enhance prestigious areas such as receptions, entrance and waiting areas as well as break-out zones and common rooms.

ONDARIA LRO allows the necessary glare control for office environments when working on a screen.

ONDARIA acoustic improves the room acoustics in "open-space" office environments through its special two-layer textile look.

# ONDARIA

## Overview

### Recessed

A range of practical accessories for recessed mounting is available to hide the ceiling cut-out and align the luminaire. Installation directly on the bare ceiling ensures load deflection. Alternatively, semi-recessed mounting is also possible.

### Surface-mounted

The luminaire is surface-mounted directly on the ceiling or wall\*. Thanks to its small indirect component and slightly offset installation, the luminaire seems to float.

### Pendant

The ONDARIA range can be flexibly suspended from three delicate steel cords that are 2 or 4 m long.

**ONDARIA opal**  
Diffused, soft light distribution

The comfortable light distribution and soft shadows create a cosy ambience, while activating luminance increases performance.

**ONDARIA LRO**  
For office applications

With a luminance of 3000 cd/m<sup>2</sup>, ONDARIA LRO is the perfect solution for workplaces with screens inclined at a flat angle. Microprisms guide the light to the work surface thus banishing any risk of glare.

**ONDARIA acoustic**  
Round wide-area luminaire with sound absorption

The round ONDARIA wide-area acoustic luminaire is optimised to meet the demands of contemporary offices that have an “open space” character, loft design or industrial look and feel.

## *SLOTLIGHT infinity*

The world's first consistent light line complies with the highest architectural and technical lighting requirements

In the ceiling, on the ceiling or suspended from the ceiling: the SLOTLIGHT infinity light line stays true to the principle of the perfect line, no matter how it is installed. Thanks to its innovative design, the individual assembly steps are now made even easier and, when installed flush with the ceiling, an attractive transition is also ensured. High-precision shadow gaps provide for perfect lighting. SLOTLIGHT infinity knows how to take light round the corner, its illuminated L-connectors

opening up new scope for creative design. Room geometries can be made clear more effectively, room zones can be redefined, and corner areas can be brought into sharper focus using light. The 90° angle modules are not merely connectors; they blend in as an integral part of the luminaire, their consistent, virtually end-to-end illumination being just as perfect as the dead straight light lines.

*For more information, see section 4.*

**MELLOW LIGHT evolution**

**MELLOW LIGHT infinity**

## *MELLOW LIGHT evolution / infinity*

Surface-mounted LED luminaire

### **MELLOW LIGHT evolution**

A sky for the office: the brightness is distributed gently and uniformly throughout the room. The well-balanced illumination of the work surface, wall and ceiling creates an open, bright atmosphere in the room and helps prevent glare and irritating shadows. The perfectly dispersed LED points remain invisible.

### **MELLOW LIGHT infinity**

The lighting can be adjusted flexibly to suit different needs and situations thanks to separately controllable light channels. The two lighting wings create a pleasant background brightness to give the room an inviting atmosphere. Switching on the direct light component in the middle supplies the work surface with perfectly targeted light.

*Design: Daniel Stromborg,  
Practice Area Leader, Gensler*

## MELLOW LIGHT evolution / infinity

The daylight classic

### Surface-mounted luminaire

#### Crystal optic

This re-interpretation of the classic lens optic guarantees glare-free illumination with up to 4800 lumens. This makes it ideal for areas that require more than 500 lux or where there are greater distances between the luminaires. The contrast with the diffuse lighting wings also creates some impressive lighting effects.

#### Lenticular optic

Prism louvres create a gentle and homogeneous appearance while offering excellent glare suppression with up to 3500 lumens. The UGR < 19 classification, this complies with the applicable standards for DSE workstations.

AXON

Thanks to a choice of two different types of light distribution, AXON covers a wide range of application areas. The basic version meets the demands for maximum energy efficiency. The centrally arranged light emitting panel and a direct light component of 67 percent add up to a luminaire efficiency level of 115 lm/W.

AXON CRF

The focus of AXON CRF is on working with tablet PCs or high-gloss brochures and reduced reflections. To achieve this, the luminaire with laterally emitted light and non-luminous central panel is installed directly above the workstation. The indirect light component of 48 percent ensures highly uniform light distribution at a luminaire efficiency level of 112 lm/W.

## AXON

The uniquely slim indirect/direct luminaire combines maximum efficiency with convenient lighting provided by an office luminaire with good glare control.

The slim-line AXON pendant luminaire is characterised by contemporary architectural design and a large number of functions. Designed for installation in offices and with a cross-section of 38 × 38 mm, AXON provides excellent lighting quality and a high degree of glare control. This is made possible thanks to the integration of high performance LEDs in combination with the latest generation LED lens technology ensuring perfect direction

of light and glare control at the same time. Moreover, a well-balanced coordination of indirect and direct light distribution creates a pleasant atmosphere at the workstation. Various models of AXON are available for implementation into sophisticated lighting concepts. Available with a colour temperature of either 3000 K or 4000 K, the lighting can also be configured individually, depending on needs and preferences.

 Lighting solution: SEQUENCE, TECTON LED, PANOS Q

## SEQUENCE

Individual lighting solution with smart control and luminaire control according to segments

Changing types of collaboration, whether in project teams, at conventional workstations or in open space, require flexible lighting solutions that adapt to people's individual needs. A study conducted by Zumtobel in collaboration with Fraunhofer IAO has shown that users prefer lighting solutions that can be individually controlled. The SEQUENCE infinity pendant and surface-mounted LED luminaire perfectly meet these requirements. Separately controlled LED modules cater for users' individual needs in a flexible manner. Even direct and indirect lighting can be combined as required and dimmed according to the visual tasks. The lighting scenes are called up and adjusted with once click using the LITECOM lighting control

unit – individual rooms in particular can be fitted with a CIRCLE SEQUENCE infinity kit at no great effort. SEQUENCE consists of modular units of identical design that are connected in series and accommodated in a flat high-quality aluminium housing, each module incorporating 6 × 3 centrally located LED lighting points. Grouped together in three logical sets, the individual modules and the indirect light component can be controlled individually. This makes adaptive lighting possible. Continuous dimming, diffuse light emitted through the opal frame, switching of individual modules and nearly unlimited other useful scenarios are conceivable.

## SEQUENCE

Surface-mounted and pendant  
LED luminaire

**Surface-mounted luminaire, 14 modules**  
(SEQUENCE infinity, SEQUENCE)

**Surface-mounted luminaire, 8 modules**  
(SEQUENCE)

**Surface-mounted luminaire, CRF**  
(SEQUENCE)

### Modular variety

The modular design of SEQUENCE allows for a wide range of geometrical configurations and technical lighting options. A choice of pendant luminaires with direct/indirect light distribution and surface-mounted luminaires with purely direct light distribution is available. In order to perfectly implement changes in luminance, the 210 cm basic version comprises 14 LED modules. In case of a reduced

luminaire length of 120 cm, the various lighting tasks will be performed by 8 LED modules. Deliberately doing without LED modules in the central direct lighting segment will solve any problem of annoying reflections on high-gloss surfaces. Directly positioned above the task area, SEQUENCE CRF increases contrast rendering and is therefore perfectly suited for working on tablet PCs.

Lighting solution: MIREL evolution, LINCOR, LIGHT FIELDS evolution, TECTON LED

## *MIREL evolution*

Surface-mounted and suspended LED luminaire with lens optic

MIREL evolution is the next generation of the MIREL product range. By giving the luminaire a distinct appearance, Zumtobel faces the challenge of integrating energy-efficient LED technology in proven design with a unique appearance: the cluster of lenses of the MIREL evolution are visible to users. Its design being clear, unobtrusive and universally applicable, the luminaire comes with great potential for lighting quality and energy efficiency. Only 52 mm high, MIREL evolution is the flattest surface-mounted luminaire in the Zumtobel range. When it comes to luminaire efficiency, it is exemplary, too: up to 136 lumens

per watt result in short payback periods. Light distribution is effected via the lenses at a rate of 95 per cent; only 5 per cent are accounted for by the reflections from the lighting chamber. The lumen packages and module sizes, however, have not changed as compared to the classic recessed luminaire. Accordingly, conventional luminaires can simply be replaced by exchanging them 1:1. Another benefit: MIREL evolution is available in many versions, for instance as an emergency luminaire with separate battery supply.

Lighting solution: LINCOR, PANOS infinity, MICROS

## LINCOR

Indirect/direct light at the highest LED level:  
slim, convenient and efficient

With its slim and unobtrusive design, the LINCOR LED luminaire draws an elegant line through the room, its contemporary minimalism enhancing room axes and architectural concepts. Arranged as a double-length light line or a continuous-row system, it is an expression of maximum linearity. Efficient LED technology takes full effect in a section of only 63 mm square – resulting in high-quality indirect/direct lighting. All good things come in threes: increasing luminaire efficiency using innovative LED technology – increasing

a room's lighting quality using additional indirect light – and eliminating compromises in terms of design. The innovative LINCOR lighting technology (patent pending) meets each one of these requirements with minimum dimension. The luminaire's sustainability and user convenience are supported by the following figures: luminaire efficiency of 126 lumens per watt, colour temperatures of 3000 K and 4000 K, and a large direct light component of 83 %.

## LINCOR

Luminaire range

### LED minicells **Comfort**

The matt Comfort cell makes direct light safely visible. The luminaire appears as a uniformly illuminated light line enhancing architectural structures to optimum effect.

### LED minicells **Darklight**

In contrast, the highly specular darklight cell hides the direct light component. Thus, LINCOR provides optimum glare control and lets the light flow into the room from a hidden source.

### **LRO**

Thanks to the luminaire-reducing optic, LINCOR can be used even more flexibly: harsh shadows in task areas and annoying reflections are effectively reduced by prismatic lighting technology.

### **CRF**

The most recent addition to the versatile LINCOR product range is a double-length pendant LED luminaire focusing on superior lighting quality without reflected glare. LINCOR CRF provides indirect and direct lighting – however, the latter only from the laterally arranged light emitting areas. Thanks to a central part from which no light is emitted downwards, the luminaire meets the highest demands regarding contrast rendition, even where placed directly above the workstation; it avoids annoying reflections on glossy surfaces and is therefore ideally suited for working at tablet PCs. Thanks to a special lens, the ceiling is uniformly brightened up by indirect light distribution. LINCOR CRF is available with a matt Comfort optic or a highly specular Darklight optic, and with a colour temperature of either 3000 K or 4000 K.

Architecture: Pinkeye, Antwerp | BE

Lighting solution: CAELA, IYON

**Two by two: Size and shape**

The CAELA family concept shows the possibility to combine different models at your discretion and thus shape individual sculptures with big and small, round and square luminaires.

## CAELA

Slimmer and more precise

CAELA represents a beautiful blend of elegance and levity. The range boasts a series of low-profile luminaires with a highly sophisticated appearance and exceptional versatility. As a wall-mounted, ceiling-mounted or pendant luminaire, CAELA provides decorative highlights in corridors and entrance areas. Even in restaurants or private domestic areas, this lighting solution adjusts perfectly to the ambience of a particular room. CAELA is

available as a round or square luminaire with a diameter or side length of 330 mm and 430 mm. The different versions can be specified in one of six colours (white, matt silver, copper, brass, matt grey and black). The modular design of CAELA is reflected in the choice of switchable or dimmable models, with a luminous flux of 1000 lm and 2100 lm.

*Design: GRAFT Berlin*

**CAELA**

A luminaire for all instances

**Pendant installation**

The standard 2000 mm pendant tube can be cut to any length at the construction area, which makes a composition of different installation heights very easy. Since the luminaires can also turn 355° and tilt 45°, several luminaires form a curve, a wave or architectural structure as desired.

**Ceiling mounting**

Round or square, big or small:  
The installation height of all models is only 57 mm.

**Wall mounting**

Regardless of size, light distribution or shape: A fitted CAELA only extends a meagre 57 mm into the room.

## *SCONFINE Sfera*

Spherical pendant luminaires, apparently weightless and floating

SCONFINE Sfera is a range of spherical pendant luminaires with partly transparent chrome or bronze coating, with the lamps of the LED module visibly located in the luminaire unit. They provide both direct radiation into the area required and reflection inside the luminaire unit, making it appear to float. An opal inner sphere (accessory) ensures optimum glare control in conjunction with the chrome coating – enhancing the impression of plasticity and room depth.

### **SCONFINE SFERA LED**

The spherical SCONFINE Sfera pendant luminaire creates impressive, decorative accents with an interplay of light and shadow in hotel lobbies as well as shops, foyers or mansions. The partly transparent, chrome- or bronze-plated luminaire units with diameters of 170 mm, 250 mm and 500 mm are exceptionally attractive, both as individual luminaires and luminaire groups.

*Design: Matteo Thun*

## *LQ CHANDELIER*

A decorative pendant luminaire that can be arranged to form a lighting object

“LQ” is a humorous reference by the New York architect Hani Rashid to Louis Quatorze, the Sun King. The application of certain geometrical principles, the focussing of miniature faces into a multi-faceted reflector, and the accurate arrangement of innovative LED light sources is all it takes to create exciting visual effects, a complex relational texture of form and light.

The basic unit of the modular chandelier consists of four LED modules, each fitted with 3 LEDs of 1.2 W each. A highly distinctive feature is the downwardly opening tulip-shaped design of the chrome-plated components, which emphasises the chandelier’s avant-garde look.

*Design: Hani Rashid*

↑ **LINETIK | LED free-standing luminaire**

Not so much a luminaire, more of a delicate object with a great effect: LINETIK speaks a clear, but minimalist design language. The slim body of the luminaire has a cross-section of only 24x24 mm, like the column. Despite this subtly filigree appearance, it is robust and can be erected or positioned in the room in a few simple steps.

## *Free-standing and wall-mounted luminaires*

Mobile task luminaires for greater freedom of design plus extra convenience and maximum efficiency

In line with current trends, these luminaires provide maximum efficiency and ergonomic compatibility. What is more – they are completely independent and flexible. Free-standing luminaires can be positioned wher-

ever required: in any location in the room, at any position relative to the task area; there they focus their light onto the specific visual task – economically and efficiently.

*Design LINETIK:  
F Mark Ltd., with Luke Smith-Wightman*

## *KAVA LED*

Effective and functional luminaire for vertical surfaces

The square recessed wall luminaire ennobles any room – through its elegant design and mellow light. The asymmetric reflector directs light directly to the floor or ceiling, the luminaire itself blends into the background. That's how the KAVA LED tackles the strict geometry of vertical surfaces and produces refreshing lighting effects.

With two sizes, each in three frame colours, the KAVA LED offers the freedom for individual

design. Mirror reflectors made of matt anodised pure aluminium allow asymmetric light distribution. Popular areas of use include entrance areas, hallways and stairwells in hotels, public buildings or car parks. They are also readily used in hospitals and retirement and care homes as orientation lighting.

Easy to install in cavity walls thanks to the snap-fit clips. Special recessed wall housings offered as an accessory for solid walls.

## **HELISSA**

A convincing appearance in a uniform design

Effective as well as energy-saving: the decorative HELISSA wall and ceiling-mounted luminaire masterfully sets corridors, staircases, functional and wellness areas centre stage. The round version of HELISSA blends seamlessly into its architectural surroundings thanks to its unobtrusive design. A subtle white or coloured corona gives the luminaire an incredibly weightless look and emphasises its decorative appearance. The diffuser is made of UV-resistant polycarbonate (IP40). HELISSA's elegant design is topped off by a solid aluminium frame in a white or titanium

finish. HELISSA really comes into its own in all situations where attractive, efficient lighting is required at affordable cost. HELISSA is a comprehensive luminaire product line which includes emergency lighting versions to take care of all essential tasks in passageways and functional areas. With its unobtrusive design and colour, it blends harmoniously into any surroundings. When mounted on a wall or ceiling, indirectly radiated light wraps the luminaire in a soft corona, which, together with diffused direct light, produces an agreeable room atmosphere.

## TECTON

The continuous-row system with boundless versatility

TECTON is the world's first continuous-row luminaire to have an 11-pole current conducting section built into its trunking. This means that the system comes ready equipped to meet tomorrow's needs. All functions such as power supply, lighting control and connection to emergency lighting are seamlessly integrated into this multifunctional trunking. Luminaires can be positioned flexibly and the system can be adapted to suit structural alterations at any time. TECTON copes effortlessly with various lighting requirements – at the time it is installed and whenever there are changes. The TECTON trunking remains

unchanged and forms the functional backbone of the system. It is simply a matter of replacing or adding lighting modules, light sources or optics as required.

**TECTON MIREL LED** brings together the best of two worlds. Whereas the slim continuous row stands out above all by its enormous flexibility, the MIREL evolution office luminaire guarantees high visual comfort, even with demanding visual tasks. The continuous-row lighting system that is rounded off in this way satisfies a wide variety of requirements in a uniform design.

## **ZX2 LED**

The LED continuous-row lighting system for industry and retail

As an energy-efficient continuous-row LED system, ZX2 is the ideal lighting solution for simple surface lighting in industry as well as shelf and surface lighting in supermarket applications.

Due to its similar dimensions, the ZX2 LED allows an easy exchange and replacement of existing 58 W T26 and 35/49/80 W T16 solutions. The electrical and mechanical installation on the ZX2 trunking requires no tools thanks to two side-mounted rotary levers.

## LINARIA

A slender line which consistently allows architecture to take centre stage

*“The more simple and minimalist a product is to be, the greater the challenge is for all those involved. LINARIA is the result of single-purpose collaboration between design and lamp development. The luminaire asserts itself with the quality of its materials and its clear design; straight-line simplicity always survives the whims of fashion.”*

The creation of elegant light lines is the main purpose of the delicate **LINARIA LED** batten luminaire. This is made possible by various lengths ranging from 600 mm to 1800 mm that can be joined to form light lines. Freedom

of choice is provided by surface-mounted, recessed and pendant versions as well as models with colour temperatures of 3000 K and 4000 K. At a system efficiency of approximately 100 lm/W in the 900 mm version, LINARIA LED presents itself as a trend-setting lighting solution with class. Added value is also provided by the luminaire’s easy handling, owing to the converter being built into the LED batten luminaire as well as its easy, straight-forward installation. LINARIA LED therefore has many assets.

*Design: Klaus Adolph - AGLICHT*

**LINARIA**

Batten luminaire and light line

**Superior lighting all along the line**

With LINARIA LED, Zumtobel perpetuates the slim light line's history of success. The combination of purist design with high-power LED modules results in consistently superior lighting that can be emitted across the luminaire's entire length and even at its front ends. Thanks to the completely resolved LED points, the luminaire's appearance is perfectly uniform.

A further benefit is the also simplified mounting concept. Thanks to loop-through wiring, little effort is needed to form a light line. A push fastening enables easy access to a completely recessed luminaire.

## XPO

### LED shelf lighting system

XPO is an efficient alternative to wide-area illumination and provides perfectly dosed amounts of light for each shelf bay, directly illuminating the products. Combined with a special narrow-beam optic, this brilliant LED light sets an extremely wide variety of products centre-stage superbly. The authenticity of products is accentuated by different colour temperatures. As LED light contains

no infra-red or ultraviolet radiation, even delicate products can be gently lit and groceries stay fresher longer. There is also another economic benefit: the XPO's excellent efficiency of up to 79 lm/W and long service life of 50 000 hours (luminous flux never drops below 80 % of its original value!) ensure that XPO is a lighting solution with a small carbon footprint.

**XPO shelf lighting**  
System overview

**Magnetic holder**

The magnetic strip provides both a fixed and variable connection between shelves and luminaire units. Designed as a wedge with a 20° angle, it directs light straight onto the first row of products.

**Luminaire unit made of aluminium**

The slender heat sink provides the basis for the LED luminaire's excellent thermal management which ensures a long service life.

**LED board**

XPO's great efficiency of 79 lm/W\* and long service life of 50,000 hours (luminous flux decreases to no less than 80% of its original value) cut the costs of energy and maintenance.

**Narrow-beam optic**

Its optic, specially developed for shelves, focuses light to provide richly accented lighting. This achieves illuminance levels up to 1000 lx on the front edge of the merchandise (maximum distance from shelf below: 400 mm).

**In conformity with standards**

Suitable for standard supermarket shelf lengths of 600 mm, 1000 mm and 1200 mm, XPO ensures maximum levels of flexibility in all three lengths.

## CRAFT

Never before has a luminaire been so powerful, so compact and so efficient

The CRAFT high-bay LED luminaire is a real success story, thanks in no small part to a specific design, rectangular light distribution and excellent thermal management. CRAFT S, M and CRAFT L models are even ready to cope with future demands, thanks to versions providing higher light output and sophisticated technical features that make it even easier to handle the luminaire. With luminaire efficiency reaching up to 154 lm/W, luminous flux levels now range from 7500 lm to 34 000 lm, helping CRAFT solve any lighting task with optimum precision. An individual suspension assembly, a 90° TECTON adapter and a dedicated CRAFT TEC model, which already includes a built-in TECTON adapter, provide additional scope for installation.

To achieve high-precision light direction, each LED has been assigned a separate lens, which means that long shelves can now be illuminated as efficiently as spacious bays.

Additional applications, for instance in projecting roofs of petrol stations or in sports facilities, are opened up by the special **mounting frame** for the CRAFT high-bay LED luminaire. Fitting the CRAFT S, CRAFT M and CRAFT L design sizes in each case, trend-setting lighting solutions can be configured that feature an attractive design and high functionality.

## *PERLUCE*

A comprehensive product range that combines toughness with problem-solving expertise

Luminaires with extra protection are used when the primary requirement placed on a fit-for-purpose lighting solution is better protection and simpler maintenance.

PERLUCE is a closed lighting system that sets new standards in terms of everyday usability and combines this with a variety of optics, IP50 and IP54 protection and various models.

Its deliberately utilitarian materials are reflected in its functional design. Its plain, unpretentious stylistic idiom gives precedence to the architecture of the room: light, not the luminaire, is the centre of attention.

## *CHIARO II*

All-round, cheery light distribution

CHIARO II is a direct/indirect luminaire with a polycarbonate housing which outclasses conventional moisture-proof luminaires: it delivers an all-round, friendly lighting atmosphere that customers and employees regard as a hallmark of safety. Photometrically optimised for lighting car parks and industrial buildings, CHIARO II is a linear luminaire with a visually slimline design that demonstrates its abilities to full effect, even in spaces that have low ceilings or as a circular luminaire.

Thanks to advanced LED technology, the CHIARO II LED linear luminaire and the CHIARO II FTR LED circular luminaire feature the same quality and functions as conventional moisture-proof luminaires with fluorescent lamps. Their extra benefits include the luminaires' general dimmability and significantly lower maintenance and electricity costs. The primary optic inside made of high-grade PMMA materials ensures uniform illumination and enhances the luminaires' homogeneous look.

## SCUBA

A luminaire that puts up with a lot and delivers even more

Its clever mix of features makes SCUBA the new innovation leader in moisture-proof luminaires. Not only are installation, maintenance and cleaning child's play – SCUBA always provides perfect lighting conditions, even under the most demanding environmental conditions, and also boasts reliable protection against external influences and chemicals.

Durable, virtually maintenance-free and efficient: high-quality LED luminaires are a reliable lighting tool for keeping operating costs sustainably low. Aspects of economy have been combined with aesthetic styling, performance and toughness for SCUBA LED. The consistent look of the luminaire, which

is enshrined in a primary optic, is distinctive of this.

SCUBA luminaires feature outstanding long-term sealing performance. A dependable combination of sealing rim and all-round gasket prevents dripping water from penetrating inside the luminaire. Innovative material compositions ensure that seals remain durably elastic and dimensionally stable. A special expansion joint compensates for the different coefficients of expansion of various combinations of materials used in the housings and diffusers, thereby ensuring IP65 protection for all models.

## CLEAN

For cleanrooms in healthcare settings and industry

### **CLEAN SUPREME – for extreme requirements**

The unique feature of the top-of-the-range model in the CLEAN product line is a continuous smooth safety glass diffuser. The 4 mm thick toughened safety glass does not need a frame nor is it interrupted by fasteners (consistent IP65 protection rating). The innovative magnetic fasteners combine safety with functionality. The CLEAN supreme LED clean-room luminaire is now able to make full use of the potential of LED technology. In addition to its high colour rendering index of up to Ra 90, CLEAN supreme LED cannot fail to impress due to the extremely low maintenance requirement and hence reduced service costs. Fraunhofer IPA certificate for clean-room compatibility in clean rooms of Classes 3 to 9 (ISO class).

### **CLEAN ADVANCED – for exacting requirements**

The diffuser including a high-quality anodised aluminium frame with a safety glass panel inserted is characteristic of the mid-range model of the CLEAN clean-room luminaire (IP65 protection, IP54 on the side facing the ceiling). For application areas where a particularly high colour rendering index is required, Zumtobel now offers the CLEAN ADVANCED LED clean-room luminaire also with a colour rendering of Ra 90. Fraunhofer IPA certificate for clean-room compatibility in clean rooms of Classes 3 to 9 (ISO class).

### **CLEAN CLASSIC – for increased requirements**

The CLEAN classic LED luminaire with opal PMMA optic, available either with warm or intermediate light colour, has been added to the CLEAN portfolio. A choice of two colour rendering levels is available (Ra 80 or Ra 90). The classic version of the CLEAN luminaire focuses on basic clean-room requirements such as good hygiene and ease of cleaning. PMMS acrylic glass inserted into the high-grade anodised aluminium frame ensures IP54 protection (IP20 on the side facing the ceiling).

Lighting solution: SUPERSYSTEM outdoor

### Impressive diversity

With an extensive selection of optics and sizes, NIGHTSIGHT precisely shapes light on all levels. A series of different application areas can therefore benefit from the creative freedom that helps provide an individual space with a strong identity.

### NIGHTSIGHT Area Light with softGlow-optics

Excellent visual comfort for squares, pathways and residential streets is achieved by carefully controlling the direction of the light and by minimising the luminance contrast between the LED light points and the surrounding grid. An additional vertical lighting component enhances facial recognition and strengthens the feeling of safety. The softGlow optics support improved visual comfort. When a person enters the lit area, their eyes can easily adjust to the brightness and the sense of glare is reduced.

### NIGHTSIGHT Projection with darkBeam-optics

Façades and architectural details that are showcased with light can only be truly appreciated when the luminaires themselves do not predominate. The LED optics are deliberately recessed into a matt black grid to limit visibility of the light source from the side and thereby reduce glare caused by stray light.

## NIGHTSIGHT

NIGHTSIGHT delivers urban lighting on a human scale

Exterior light has the potential to fulfil essential functions and to stimulate human emotions. An atmosphere that enhances spatial orientation and increases social interaction is created when vertical and horizontal levels of light are intertwined.

The NIGHTSIGHT LED outdoor luminaire range makes this possible through a subtle blend of multi-zone precision and the

integration of various structural shapes, sizes, installation options and colour temperatures in a modular system. The result is a lighting solution with a consistent design language in all areas – one that ensures exceptional visual comfort, a strong feeling of safety and genuine wellbeing.

Lighting solution: SUPERSYSTEM outdoor mast and façade luminaire, situation-specific with 6 to 34 pre-assembled LED tubes, central Zumtobel outdoor lighting management system with web interface

**Lighting that makes an area effective**

Conventional street lights primarily brighten horizontal areas. However, this is not sufficient to design an outdoor area impressively. SUPERSYSTEM outdoor includes both vertical as well as horizontal areas in the lighting concept – the spatial structure can thus also be experienced at night. Unique visual comfort is produced by division of the amount of light: Light emitted from multiple tubes prevents too high light pressure, limits the glare and distinguishes the luminaire as visually restraining lighting tool.

Conventional street lighting

Street lighting with SUPERSYSTEM outdoor

## *SUPERSYSTEM outdoor*

Multi-zone lighting for effective design of outdoor areas

### **SUPERSYSTEM outdoor is breaking new ground**

Multiple light tubes create a uniquely refined luminaire. As a result, the outdoor lighting gains in visual quality, design competence and precision. The best glare suppression increases visual comfort and well-being. Directed,

well-dosed light also actively protects against light pollution. The luminaire itself deliberately stays in the background and results in continuous design through all applications. Multi-zone light distribution and pivoting tubes on request make it possible.

## *PYLAS*

Efficient façade lighting from close up or far away

Featuring superior LED technology and efficiency of more than 60 lumens per watt, the PYLAS LED floodlight is a pioneer in contemporary façade lighting. The extensive PYLAS product range, which includes four design sizes in an identical design, presents itself as an ideal solution for illuminating façades from various distances and for highlighting details. PYLAS is one of the most versatile floodlights available on the market, boasting power ratings from 1.2 to 52.5 W, narrow-beam and wide-angle radiation angles as well as various

white light colours and RGB models. The luminaire cannot fail to impress on account of its easy installation and functional design: double powder coating makes the LED spotlight with IP66 protection especially durable and resistant. Flush-fitting glass panels without a groove prevent deposit of dirt and residual water. The models can be precisely adjusted via a graduated scale and are fixed with a double safety mechanism. The anti-glare accessories available ensure targeted lighting without any scattered light.

## ELEVO

### Accents for near and far

Precise and flexible: the flat LED spotlight is less than 3.5 cm high but handles an extremely wide range of lighting tasks brilliantly. It emphasises façade elements, relief slabs and projecting features, backlights surfaces uniformly and sets tall columns and portals centre stage with equally striking effectiveness. ELEVO combines various light distribution patterns with the option of selecting either warm white or cool white light. In this way, both historic redbrick façades and contemporary metal façades can be illuminated authentically or set centre stage using coloured and dynamic lighting in order to catch people's attention.

With its compact dimensions, the LED spotlight is primarily suitable for accent lighting

on façades, for surfaces or implementation of media façades indoors and outdoors. Available with elliptical, narrow or wide beam angles or as a superspot, the luminaire ensures the targeted direction of light, and is able to produce lighting effects that are extremely finely tuned, depending on the lighting task at hand. A linear wallwasher that is available in lengths of 400 mm, 800 mm and 1200 mm, ELEVO Slimline is perfectly suited for illuminating large façades and surfaces. Just as flexible as ELEVO's application areas are the options to control it: either via a DMX protocol or a USB service tool, or ELEVO can also be dimmed using a separate PWM control line. The built-in temperature guard ensures a long service life of the IP66-rated luminaires.

APHRODITE lighting scenes

## APHRODITE

Special functional and emotive lighting effects

Light that is never static and never indicates any symmetry: the APHRODITE LED spotlight combines light, colour and movement in a fascinating manner, allowing to impressively set façades and rooms centre stage. Based on the lighting spectacles found in nature, a unique lighting concept has been developed that is characterised by highly emotive lighting scenes. In the process, the benefits of LED technology show to particular advantage. Permanently flowing, yet non-repetitive lighting projections are made possible by a special system (patent pending) comprising a specially developed LED module and a specially shaped, motor-driven rotating glass cylinder. A choice of seven pre-defined lighting scenes with three

speeds and various dimming levels is available. They create variable and ever-changing atmospheric lighting scenarios from functional white light in various colour temperatures, combining them with emotive coloured light from red, blue and amber LEDs.

Individual lighting scenes, and the projection direction and speed can be set manually via momentary-action switches on the spotlight or by remote control via DMX protocol.

Thanks to IP65 protection and the use of materials that are highly resistant to chlorine, APHRODITE is an eye-catcher also in wellness areas, inviting people to relax.

## PAN

### The small alternative to conventional floodlights

With a diameter of only 52 mm, PAN is the smallest recessed spotlight for façade lighting available on the market. The rugged spotlight can be fitted flexibly in a downlight or uplight position to highlight architectural details, which makes it an expert for illuminating windows and cornices while remaining perfectly unobtrusive itself. The luminaire, which is made of die-cast aluminium, features IP65 protection and is ready for recess and surface mounting using a surface-mounted housing, demonstrates its strengths for both modern buildings and buildings protected as historic monuments. PAN is fitted with a high-output LED and requires minimum power of only

1.25 W; it is therefore a contemporary and sustainable alternative to conventional floodlights with high lumen output.

Thanks to the varied range of models available, the maintenance-free LED luminaire provides plenty of design freedom: the choice of optical systems available includes narrow-beam spots and a wide-angle flood optic through to an elliptical lens with asymmetrical light distribution. Colour temperatures of 3200 K and 6000 K make PAN perfect for illuminating a variety of materials and surfaces such as aluminium and sandstone. The 350 mA luminaire can be wired conveniently and quickly with an external supply box with a built-in converter.

## *LEDOS III*

Design variety in terms of both form and function

The third generation of LEDOS is available in three sizes and two designs and is generally smaller, more powerful and more efficient. This highly flexible recessed luminaire produces impressive technical lighting results and excels as an all-rounder for walls, floors and ceilings in indoor and outdoor locations.

Different optics ensure application diversity using high-precision lighting technology, ranging from lighting points that allow easy orientation through to façade elements precisely lit in warm or cool white light. These luminaires boast reliable protection (IP67), can be walked over and can bear loads of up to 1000 kg.

Lighting solution: PASO II, KAVA, 2LIGHT MINI, VIVO, STARFLEX

## PASO II

Lighting competence at every step and turn

PASO II knows how to hit all the right buttons when it comes to setting dramatic contemporary lighting scenes whilst remaining unobtrusive itself. Apart from conventional light sources, the PASO II luminaire range also offers a great variety of LED models.

When used as a recessed floor luminaire, the PASO II LED luminaire produces monochrome or colour-changing RGB columns of light. The mature technology built into the PASO II recessed floor luminaire with IP67 protection also makes it perfect for installation on the ceiling (IP65). It ensures longevity and functional safety, particularly in locations where air humidity is high or there is significant exposure to dust or insects. PASO II LED luminaires are ideal for use in hospitals or wellness facilities because of their low maximum surface

temperature, which does not exceed 40 °C. PASO II LED offers design variety with round and square models as well as a flush-mounted or overlapping special steel frame. With its round and square versions as well as flush-mounted and overlapping stainless steel frames in three sizes, 120/190/260 mm, PASO II provides for design variety. It is particularly suitable for lighting sculptures, façades, public areas, as well as hotels or historical buildings. The corrosion-resistant stainless steel housing and the patented sealing system, in combination with the Camlock fastener, guarantee a premium-quality look.

The extra low-profile PASO II, which is available in sizes 190 and 260, is only 100 mm high, including its casting surround.

## ORILED

### Orientation lighting close to ground level with LED

People need to be able to find their way intuitively at any time of day. This is especially true when it comes to finding one's way around public buildings. Light makes an important contribution to this and also improves safety. ORILED is the perfect alternative to conventional fluorescent lamps. A unique lens/reflector combination directs LED light onto the ground over a wide area. The luminaire's extremely uniform light distribution is ideal for specifically illuminating stairs, corridors, passageways and circulation areas.

Here, LED technology is an efficient alternative to light sources with relatively higher wattages and luminous flux levels.

The optionally flush-fitting or overlapping stainless-steel frame is safely yet invisibly attached using Camlock fasteners. These recessed luminaires and bollard luminaires are available with IP65 protection and are perfect for both indoor and outdoor use. Alternatively, ORILED is also available with separate battery packs for 1 or 3 hours of operation for use in emergency lighting systems.

Lighting solution: LUXMATE PROFESSIONAL  
lighting management system

## LITECOM

LITECOM

### The next generation of lighting management

In order to develop LITECOM, Zumtobel cooperated with the best partners from the most varied disciplines. In collaboration with renowned development partners, they have created a pioneering and innovative open lighting management system that will forever change the world of building management. Interface designers and application experts have been involved in the project from the beginning. The result is a new form of lighting management that combines intuitive control via apps with easy installation and operation using an individual controller. For users,

LITECOM means easy configuration, intuitive user guidance and maximum flexibility, which is made possible thanks to the synthesis of controller, control unit and software within one system. This allows for the implementation, control and monitoring of individual lighting solutions that fully correspond to the specific requirements of a project: if required, additional functions can be programmed and integrated. LITECOM reduces complexity and can easily be controlled in an uncomplicated manner via any PC, smart phone or tablet using web technology.

## LITECOM lighting management

### Unique app concept

Through LITECOM, lighting management is given a new form of unlimited flexibility and customisation. This is made possible through a unique app concept.

#### Customised functionality

Owing to the app concept, the lighting management system can be adjusted precisely to the needs of any building or user. Additional apps can be included at any time. Basic functions of the lighting system and building services are already covered by the Basic app. This includes, among other things, dimming luminaires, saving lighting scenes, and controlling screens, windows and blinds. Other functions, such as daylight-based lighting management, are covered by optional apps. Thus, any changes and additions have been provided for.

#### Light that makes people feel good

Based on the unique LITECOM control strategies, permanently available daylight not only increases the system's efficiency but also enhances people's well-being. At all times, visual contact with the outside world is maintained. Visible and noticeable daylight variations increase productivity and enhance the employees' loyalty towards the company. At the same time, LITECOM improves visual comfort, as there will be no glare even when the sun is low.

#### LITECOM Wizards: guided commissioning

Step by step, the addressing wizard will guide you through the commissioning procedure. This tool allows even non-engineers to commission the system effectively. Basic functions such as switching and dimming of luminaires and luminaire groups as well as lighting scenes are available after just a few steps. Other wizards will help users make settings and configurations for special luminaires or daylight-based control.

#### Mobile interaction

Every computer connected via a network, every tablet and every smartphone can assume the function of an operating point or control unit. The various expectations of users and system administrators are met in a target group-adequate manner using a 2-tier access system: no more than a click is required to call up a lighting scene, new functions can be added within seconds, and configuration is guided step by step. For the user interface especially developed for LITECOM is just as easy to use as a momentary-action light switch.

FUTURE APPS

SEQUENCE APP

APP FOR DAYLIGHT-BASED CONTROL

Every device fitted with a Web browser can be used as a LITECOM control unit. The user interface is displayed after one click.

CIRIA

CIRCLE

Mom.-action switch

Zumtobel control units and conventional momentary-action switches fulfil the functions of traditional manual control in LITECOM systems.

**LITECOM**

A single LITECOM controller is enough for small buildings or a single floor. If the system is expanded to a LITECOM infinity system, several existing controllers are linked with one another. The opposite way is also possible at any time. By removing them from the system, each controller can again be transferred to the self-sufficient LITECOM mode with 250 addresses.

**LITECOM infinity**

The number of possible addresses adds up by linking several LITECOM controllers. A first generation LITECOM infinity system can comprise up to 2500 addresses with up to 15 controllers and ultimately up to 100,000 addresses will be possible. The system can thus be flexibly adjusted if the requirements in the building change.

LITECOM CCD, Central Control Device:  
The heart of the lighting management system

## *LITECOM infinity*

Next-generation lighting management for buildings and building complexes

The principle is astonishingly simple: The larger the system, the more controllers constitute a system. After networking for the first time, the controllers independently organise themselves into a LITECOM infinity system – without a central automation server, which is necessary for other systems. That is why the system is and remains so flexible. It is possible to join more controllers with a LITECOM infinity system or remove them again for self-sufficient LITECOM mode at any time.

The transition from LITECOM to LITECOM infinity is fluid. The control centre of both systems is the LITECOM CCD, which respectively controls 250 actuators. Larger systems simply need an additional LITECOM infinity controller (first version max. 2500 addresses with max. 15 LITECOM CCDs). The hardware is always the same and installation always takes place according to the same scheme. Every LITECOM infinity system of this size is presented to the observer as a unit and can be operated, monitored and configured centrally. Users only see floors and their rooms or zones when operating and can thus easily find their way.

**LITECOM**  *infinity*

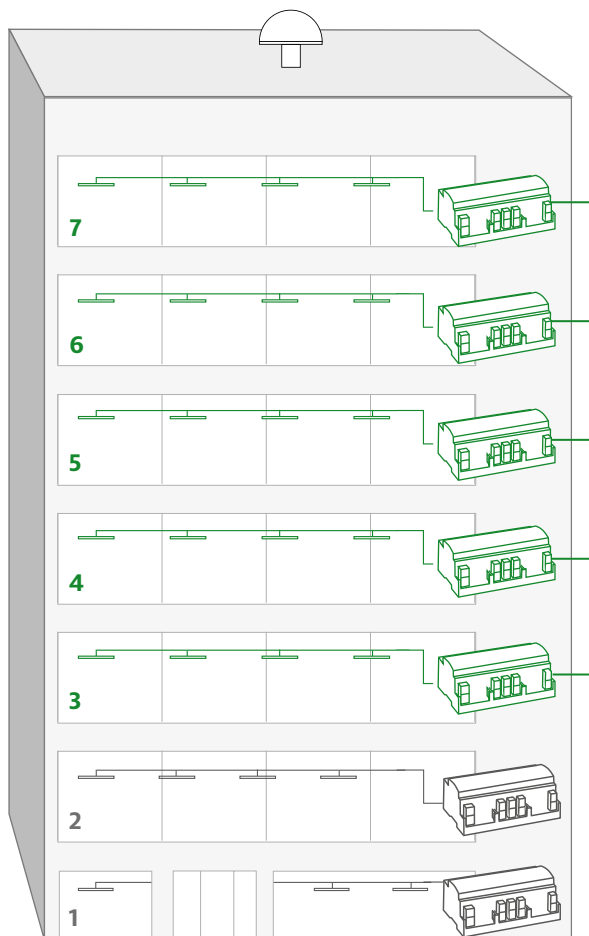

## LITECOM infinity

Lighting management with endless flexibility

### Flexible building use

A LITECOM infinity system fits precisely into any building use. From self-sufficient lighting control on each individual floor through to building-wide overall systems with an Ethernet backbone, everything is possible. Thereby, areas can be brought together and removed from one another again.

Therefore, LITECOM and LITECOM infinity are not just the ideal solution for businesses that want to flexibly react to future changes, but also for buildings that are rented out to different users. Because with LITECOM, tenant himself can decide which function he wants to use in his own area.

### LITECOM infinity

**Office:** infinity basic licence, daylight-based control with daylight measuring head, automatic blind control, shows, special luminaires

### LITECOM

**Shop:** basic functions, shows, special luminaires

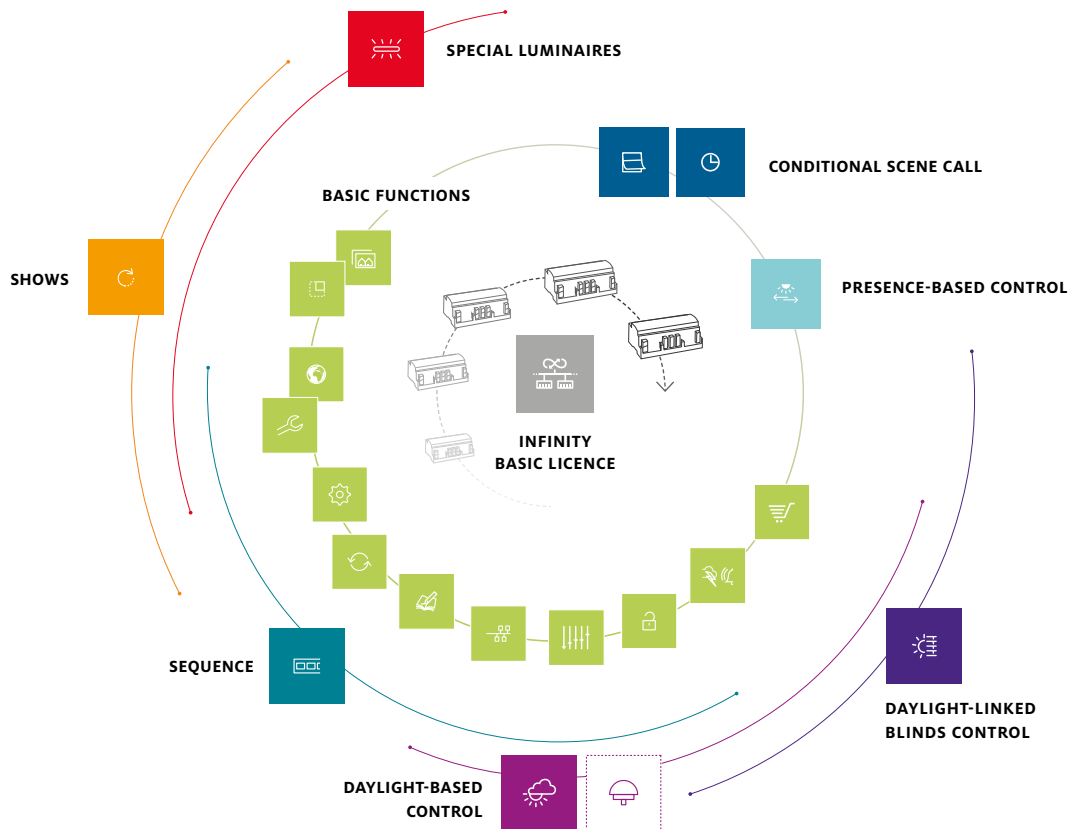

### LITECOM

**Shop:** basic functions

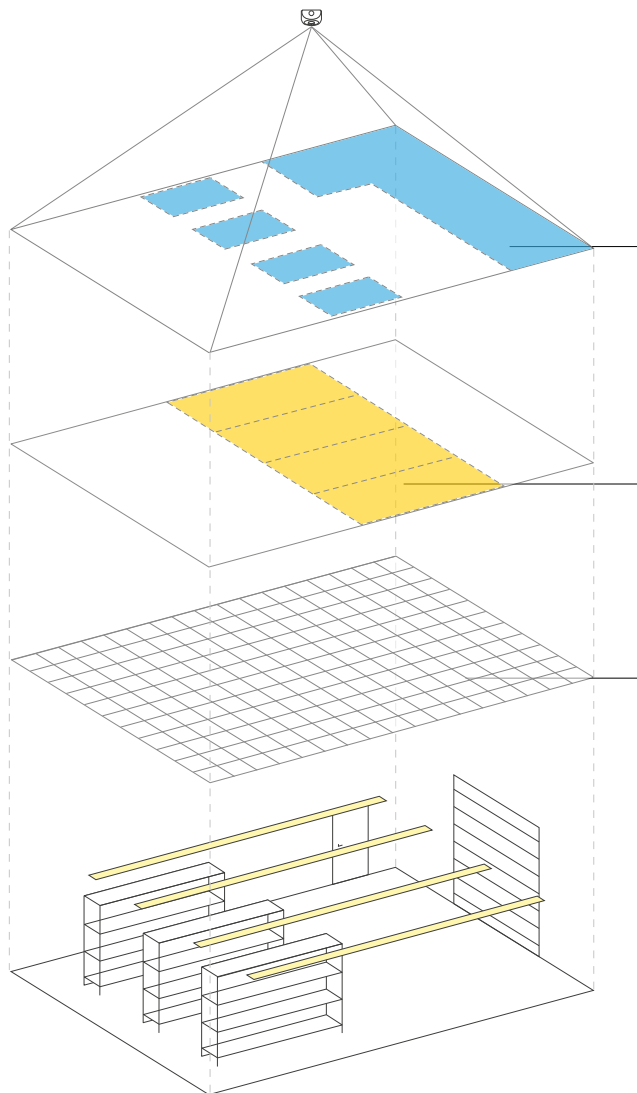

Additional LITECOM infinity licences can be included at any time. Basic functions of the lighting system and building services are already covered with the basic licence. This includes, among other things, dimming luminaires, saving lighting scenes, and controlling screens, windows and blinds.

Other functions, such as daylight or blind management with central daylight measuring head, are covered by optional licences. Thus, any changes and additions have been provided for.

**Sensors that adapt perfectly to the room layout**

**Movement zones**  
 ATIVO detects presence in up to five movement zones optimising the light in each respective zone in the desired way.

**Light measurement zones**  
 The illuminance can be controlled to individually define values in five constant light zones that are independent of the movement zones.

**Grid consisting of 17 x 11 cells**  
 The customer-specific definition of all zones is performed flexibly by selecting any number of cells and can be changed at any time.

## ATIVO

Multisensor for detecting light and movement in rooms with high ceilings

The ATIVO multisensor has been designed especially for detecting light and the presence or movement of people or vehicles, such as forklifts, in rooms with high ceilings. As compared to conventional PIR and radar sensors, the contrast sensor system features intelligent detection of objects and not only operates with significantly higher precision but is also faster, and therefore considerably less prone to errors. Applications of the ATIVO sensor include sports facilities and multi-purpose halls, industrial, manufacturing and production bays through to high-bay storage facilities and logistics centres. The sensor accurately monitors any walking or driving motion with ceiling heights between 6 m and 20 m. The ATIVO multisensor is ideal for application-specific solutions in which high energy

efficiency is of major importance: to this end, up to five zones can be individually defined by the user for motion detection; in addition, five brightness levels can be programmed, so that any hall can be divided into zones according to the specific tasks to be performed.

In case of the ATIVO multisensor, plug'n'play means absolutely simple assembly and installation. ATIVO as a DALI master system independently actuates the luminaires. Integrated into LITECOM, it supports proven lighting management functions such as daylight-based control and also serves as a basis for the "Activity Based Lighting" presence-based control system. Through this function, LITECOM provides automatic selection of the lighting scene perfectly adjusted to the use of space.

Lighting solution: LUXMATE DIMLITE lighting management, VIVO LED, TECTON LED, ZX2 LED, SCOFFINE

## LUXMATE BASIC / DIMLITE

The ideal first step into the world of intelligent lighting control

The LUXMATE BASIC CIRCLE kit is the perfect solution for increasing comfort and at the same time reducing energy consumption using the simplest possible means. Compact, simple and straightforward. Thanks to its formally reduced design, the focus is placed on functionality. One CIRCLE kit includes all components necessary to make the first step into the world of lighting management: the control point and an appropriate bus power supply are all you need for smartly managing several luminaires. This is lighting management anyone can afford. For installation and commissioning, electricians need neither special training nor additional tools.

LUXMATE DIMLITE – simply connect piece by piece. This lighting control system works like a jigsaw puzzle: various components are added to a basic module, as required. Even the basic unit provides many practical functions such as dimming, a central ON/OFF function and one lighting scene. As requested, a variety of components can be connected to this central module for a functional upgrade. Whether convenient control units like the CIRCLE control point, a presence detector, or a light sensor for daylight-based lighting control – they all have one thing in common: simply connect them and they are ready.

## *LUXMATE system components*

LUXMATE system components make it possible to control luminaires and blinds, send control unit and sensor commands, and enable bus communication among units. In building automation, these are the field level units. The units can be operated at the LITECOM and LITENET automation systems. They can also be

operated as an autonomous lighting control system without automation. This provides the basis for the philosophy of decentralised control, according to which the key functions and settings can be run and stored in the respective field units.

## *ONLITE RESCLITE emergency luminaires*

Innovative LED technology is the driver behind continuous progress

RESCLITE emergency luminaires are becoming increasingly unobtrusive and are capable of spanning ever-increasing distances. For example, it is now possible to illuminate extremely long escape routes and extremely extensive areas (anti-panic) in accordance with standards with the luminaire models in the RESCLITE high performance series – even

in cases where minimum illuminance of 5 lux or one foot candle is required. The escape route luminaires are also even flatter without the side reflectors. Instead of this, two LEDs precisely couple the light into the secondary lenses, and therefore combine maximum efficiency with skilful light distribution.

## *ONLITE escape sign luminaires*

Safety for success

ONLITE is based on extensive expertise in the area of “emergency lighting”. From one source, clearly structured, and providing a perfect solution for any application.

ONLITE allows to combine general lighting and emergency lighting into one unit which performs both tasks. In this context, great importance was attached to functional integration of the escape sign and emergency luminaires into the architecture.

Each ONLITE luminaire is available with separate, group or central battery supply. Zumtobel luminaires for general lighting can also be used as emergency luminaires. For this purpose, they are fitted with an emergency lighting module at the factory.

Lens shown in original size

**ERI spots**

Luminaires with ERI spots boast lenses on the underside which can be manually adjusted in 90° increments. The lighting cones can therefore be aligned to the escape route and adjusted locally to the building situation. Irrespective of whether the luminaire is fixed in a corner or above intersecting escape routes, the light beam can be optimised and adjusted with a single flick of the wrist.

Lighting design: Oskar Leo Kaufmann, Dornbirn | AT

Lighting solution: ONLITE local, ONLITE central, ONLITE RESCLITE,  
ONLITE ARTSIGN, PANOS

## *ONLITE local*

The emergency lighting system with separate battery supply

Emergency lighting systems with separate battery supply have one feature in common – a battery is fitted into every luminaire. In emergency mode, this supplies the lamp with power in order to prevent panic reactions, ensure the workplace is evacuated safely and

show the escape route. Economic efficiency and a high level of safety are both factors in favour of systems with separate battery supply. This system is the ideal solution for small and medium-sized buildings in particular.

Lighting solution: ONLITE central, ONLITE local, ONLITE RESCLITE,  
ONLITE ARTSIGN, PANOS

## *ONLITE central CPS*

Project-specific customised, networked central battery system

Every central battery system is designed project-specifically on the basis of a modular system. This produces solutions which are optimised in terms of the cost and functional-

ity of the system. The modular design of ONLITE central CPS guarantees a tailor-made solution for any project and a significantly optimised cost/functionality ratio.

## *ONLITE central eBox*

### Central emergency power supply system

The ONLITE central eBox works in perfect harmony with Zumtobel LED emergency and escape sign luminaires. Even the use of standard luminaires with mains voltage of 230 V AC or 216 V DC is possible. Thanks to the convenient structure and the modular plug-in technology, the central emergency power supply system can be used very flexibly. Another advantage: convenient handling thanks to straightforward assembly, optional cable entry from above and from below, and a large cable clamp compartment. Initial commissioning via the WIZARD-based menu is also very easy.

Without any additional software, up to 10 000 luminaires or 100 systems are visualised via the web browser interface. Maintenance is made easy because ONLITE central eBox disposes of indicator fields for entering individual designations, and the special hood concept provides for the simple, space-saving opening of the installation. The ideal ventilation conditions of the battery compartment offer protection against overheating.
