Visitor Management

Card Exchange™ Visitor Management lets you improve how you welcome and manage visitors to your organisation. With just a few steps it is easy to register, authorise, manage and track visitors.

The system helps to reduces reception congestion by streamlining your visitor booking-in process, allowing visitors to pre-register via email if desired. If you have an event, you can manage attendees quickly via the batch check in/out option. Visitors can be categorised if needed and can choose to self-service register via a touch screen kiosk. You can also keep your employees safe using the watch list feature, an internal watch list can be created or it can connect to a third party application to check government databases. If a visitor is on a watch list this is flagged when the visitor tries to register. The safety of employees and visitors is also made easier with a one-click evacuation report feature. The solution provides comprehensive reports such as active, expired, pre-booked visitors or visitor history reports. With the inbuilt card designer, you have all the tools you need to issue visitor passes that are professional and reflect your brand.
