Introduction to Shoviv Exchange Server Suite

Shoviv Exchange Server Suite is a one-stop solution for Microsoft Exchange and Outlook recovery & migration tasks. The smartly and professionally designed Shoviv Exchange server Suite allows recovering corrupted Exchange Database (EDB files), Outlook Offline storage table (OST files) and Outlook personal storage table (PST files). Beside this, it facilitates to add Live Exchange Mailboxes, Office 365 Mailboxes, Configured Outlook Profile as source data and export the added source server /mailboxes into Outlook PST, Office 365, Live Exchange server. Further, one can also save the added source mailbox items into the local directory in multiple formats such as EML, MSF, RTF, VCAL etc.

Key Features

1. Add multiple sources like EDB files, Live Exchange/Office 365 Mailboxes, Outlook Profile Stores (Mailboxes), Outlook PST files, OST files, Public Folder and Archive Mailboxes of Live Exchange and Office 365.
2. Recovers Mailboxes, folders, email, calendar events, contacts, tasks, notes, drafts etc. from edb file(s). from OST/PST/EDB No File size limitation.
3. Recovers attachments, images, text files etc. from OST/PST/EDB file(s).
4. Save selected single or multiple attachment(s). Also preview Attachment directly in software.
5. Save selected single or multiple items from item view panel and save them into multiple formats such as MSG, EML, HTML, VCARD, VCAL, CAL, RTF, etc.
6. Open selected items directly in outlook from item view.
7. Save selected item's attachment in local directory from item view.
8. Save multiple folder items in format MSG, EML, HTML, VCARD, VCAL, CAL, RTF, etc.
9. Save multiple folder item's attachment in disk.
10. Export single and multiple added source in PST file.
 1. Export in existing PST file if single mailbox selected.
 2. Export in Multiple PST files if multiple mailboxes are selected.
 3. Export in Multiple PST with password protected.
 4. Export in PST with split feature between 100 MB to 50 GB.
 5. Filter options are also available i.e. message class filter and date range filter.

Shoviv Exchange Server Suite

11. Export multiple Source Mailboxes in live exchange and office 365 Mailboxes with Mailbox/User Mapping option.
12. Export selected Source Mailbox in live exchange and Office 365 Public Folder and Archive Mailbox.
13. Search option is used to search a particular & multiple folder(s) items based upon **subject, from, cc, to, bcc and read/unread state** of the message. Also search based on attachment's availability , attachment's name, attachment type, message class, message date.
14. Supports both 32 bit and 64 bit of all outlook versions.
15. Supports Exchange Server 2003/2007/2010/2013/2016.
16. Close multiple and single Added source.

System Requirements

System Specifications:

- **Hard Disk** : 100 MB of free hard disk space.
- **Processor** : 1 GHz Processor (2.4 GHz is recommended).
- **RAM** : 512 MB of RAM (1 GB is recommended).

Supported Versions:

- **Support EDB** : Public and private EDB of Exchange Server 2016/2013/2010/2007/2003/2000/5.5/5.0.
- **MS Outlook (both 32 and 64 editions)** : Outlook 2000, 2003, 2007, 2010, 2013, 2016 versions.
- **Virtual environment** : Hyper-V Server 2008/2008 R2/2012/2012 R2, VMware and Microsoft Virtual PC.
- **Support Exchange Server (both 32 and 64 editions)** : 2002/2003/2007/2010/2013/2016 and Office 365.

Application Pre-Requisites:

- Microsoft Outlook should be installed and configure properly.
- **Add Source and Export to Exchange Server 2000** - Microsoft Outlook 2000 or later.
- **Add Source and Export to Exchange Server 2003** - Microsoft Outlook 2003 or later.
- **Add Source and Export to Exchange Server 2007** - Microsoft Outlook 2003/2007/2010.
- **Add Source and Export to Exchange Server 2010** - Microsoft Outlook 2007/2010/2013.
 - **Add Source and Export to Exchange Server 2013** - Microsoft Outlook 2013, Outlook 2010 Service Pack 1 (Version 14.0.6126.5000), Outlook 2007 Service Pack 3 (Version 12.0.6665.5000).
- **Add Source and Export to Exchange Server 2016** - Microsoft Outlook 2016, Outlook 2013, Outlook 2010 with KB2965295.
- **Add Source and Export to Office 365** - Microsoft Outlook 2016, Outlook 2013, Outlook 2010 SP1 (64-bit), Outlook 2010 (Version 14.0.7106.5003-32-bit).

Introduction :

User-interface of this software is designed with highly enhanced integrity so that the software can perform the task swiftly during the operation. The user-friendly GUI comes with simple and secure access for the recovery and migration of data and information.

User interface of Shoviv Exchange Server Suite consists of four Sections

Ribbon Bar :

- The ribbon bar is the top level bar in the user interface which consist of items such as Add Source, Close Source, Refresh Items, Import EML and MSG, Export Live Exchange, Office 365, Outlook PST , Save attachments, Activate License, etc.

Folder View:

- Folder view displays the mailboxes folders of added source. • Folder view contains options to add source, Close source, Save

Item, Save Attachment, Export Item, Export Item in Live Exchange, etc.

Item View:

- The Item view displays the items of source folder.
- The item view may contain options like open item, save item, save attachments and select all.

Item Preview:

- The Item Preview displays the message which is stored in the item body, item property, recipient and attachments for the source item.

Ribbon Bar

Ribbon bar contains options like actions, Export mailboxes, Export single mailbox, save folders, tools, exit, activate, etc.

1. Action

- **Add Source:** With Add source option, you are allowed to add corrupted, damaged or non corrupted source to the Software. The source may consist of EDB files, Exchange Server Mailboxes, Office 365 Mailboxes, Outlook Profile stores, Exchange and Office 365 Single stores, etc.
- **Close Source:** With the Close source option, you are allowed to close added sources such Offline Exchange server(edb), Exchange Server Mailboxes, Office 365 Mailboxes, Outlook Profile stores, Exchange and Office 365 Single stores, etc.
- **Refresh:** It helps to refresh Add source folder and items.

2. Export mailboxes, OST & PST Files:

- **Outlook PST :** Export multiple mailboxes, OST files in Existing or new PST files.
- **Live Exchange :** Export Multiple added source mailboxes, OST & PST files into Live Exchange server.
- **Office 365 :** Export multiple mailboxes, OST & PST files into Office 365.

3. Export mailbox, OST & PST File:

- **Live Exchange mailbox** Export single mailbox, OST & PST file to Live Exchange mailbox.
- **Office 365:** Export single mailbox, OST & PST file to Office 365.

- **Live Exchange Public folder:** Export single mailbox, OST & PST file to Live Exchange Public folder.
- **Live exchange Archive folder:** Export single mailbox, OST & PST file to Live Exchange Archive mailbox.

4. Save Folders:

- **Save Items:** With Save items, you can save source email items into various email formats such as EML, MSG, HTML, VCARD, VCAL, CAL, RTF, etc including filter and folder hierarchy.
- **Save Attachments:** Save multiple items attachment into disk using filter and folder hierarchy.

5. Tools:

- **Search:** With this option, you can search the items of source mailboxes, OST & PST file using various criteria such as Item subject, recipients(To), sender(from) , item property and attachments availability.

6. Exit:

- **Exit:** The Exit option allows to depart the software using click exit button.

7. Activate:

- **Activate License:** You can activate the functionalities of this software through 'activate license' option. The activate license option consist two types of activation (a)online Activation and (b)offline activation.
- **Buy Now:** Buy now option allows to buy the software. It redirects to our official website from where you can buy the software with full functionality.

Tools - Action in Live:

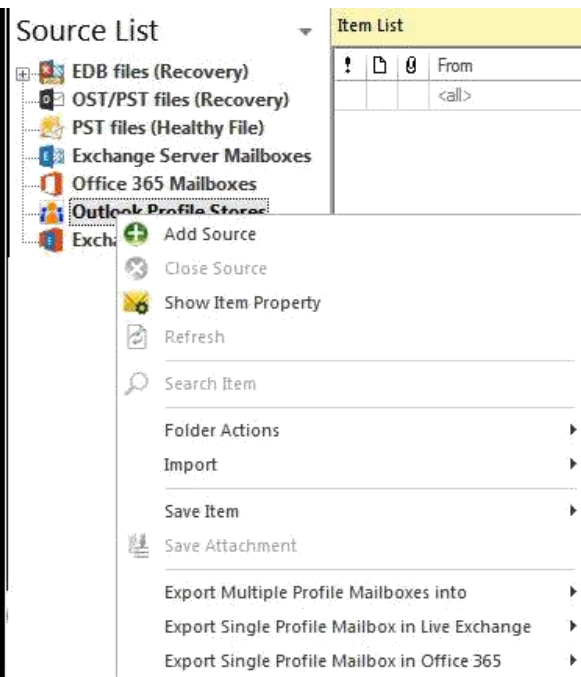

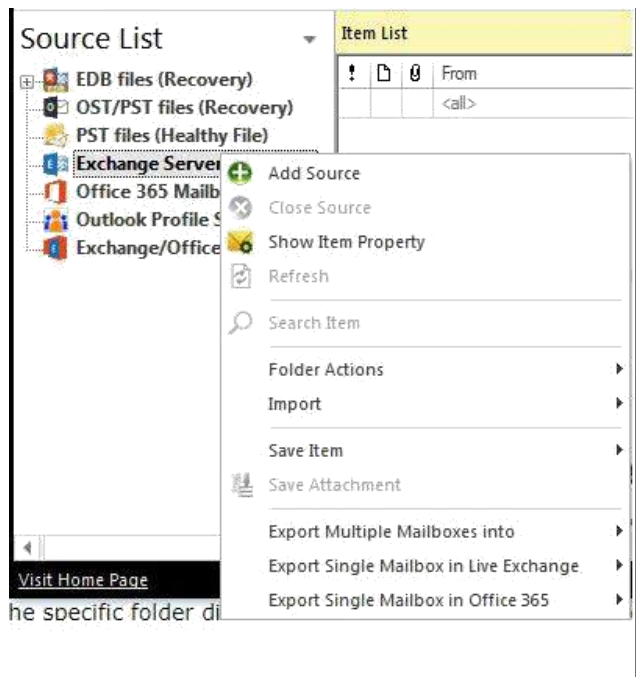

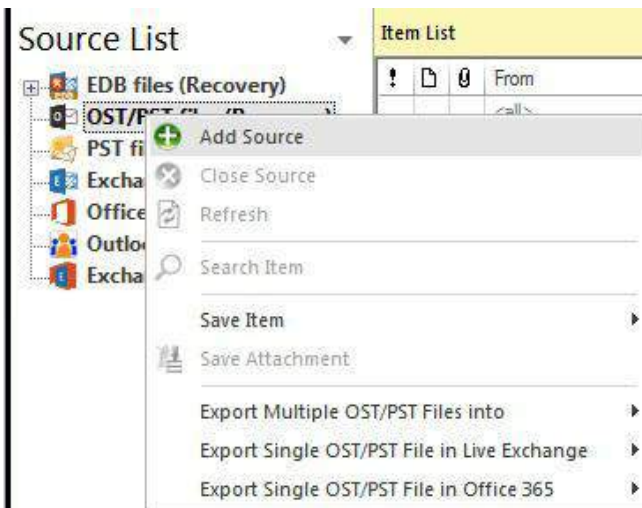

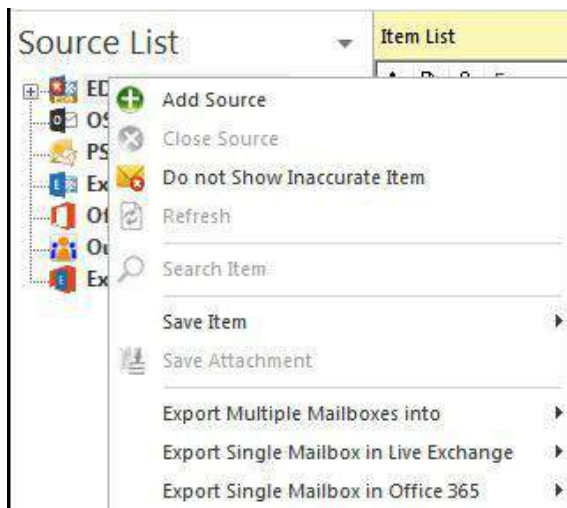

Shoviv Exchange Server Suite

- **Import EML:** Import EML files allows to add EML items into added Live Exchange server, Office 365, Outlook Profile and healthy PST file.
- **Import MSG:** Import MSG option allows to add MSG items into added Live Exchange server, Office 365, Outlook Profile and healthy PST file.
- **Create folder:** This option create folders in added Live Exchange server, Office 365, Outlook Profile and healthy PST file.
- **Rename folder:** Rename folder option allows to rename folders in Added live exchange, Office 365, Outlook Profile and healthy PST file.
- **Delete folder:** If you want to delete the added folder in Live Exchange, Office 365, Outlook profile and healthy PST file then delete folder option will help you to do that.

Folder View

Folder view displays mailbox folders that have been added to the applications as a source. It contains the list of mailboxes and their folders. The folder view consists many options which you can access by right-clicking on folder view.

Shoviv Exchange Server Suite

- **Add source** - This option is used to add the source mailboxes to the software. i.e. - EDB file, Live exchange, Office 365 mailboxes, OST & PST file.
- **Close source** - It helps to close the added source.
- **Do not show inaccurate item** - Prevent inaccurate items to show on the listing (only applicable for EDB file).
- **Show Item Property** - Show or hide item property in case of added source is live. This option is not applicable for EDB & OST/PST items.
- **Refresh** - To refresh the folder items.
- **Search** - Search specific items using various filter and criteria.
- **Folder Actions**
 1. **Create folder** - Create a new folder to the source file directly from the software. This feature is not applicable for added EDB and corrupted OST/PST source.
 2. **Rename folder** - Rename the folder of the source file directly from the software. This feature is not applicable for added EDB and corrupted OST/PST source.
 3. **Delete folder** - Delete the folder of the source file directly from the software. This feature is not applicable for added EDB and corrupted OST/PST source.
- **Import EML items** - Import EML file items to the specific folder directly from any specific location of the disk. This feature is not applicable for added EDB and corrupted OST/PST source.
- **Import MSG items** - Import MSG file items to the specific folder directly from any specific location of the disk. This feature is not applicable for added EDB and corrupted OST/PST source.
- **Save item** - To save email items into the disk in various formats such as eml, msg, html.
- **Save attachment** - To save email items attachments into the disk.
- **Export in Outlook PST** - Export Source mailboxes and OST/PST files into Outlook PST format.
- **Export Multiple Profile Mailboxes into** -

Shoviv Exchange Server Suite

- **Outlook PST Files:** - Export multiple profile mailboxes into Outlook PST files.
- **Live Exchange Mailboxes :** - Export Multiple profile mailboxes into Live Exchange.
- **Office 365 Mailboxes :** - Export Multiple profile mailboxes into Office 365 Mailboxes.

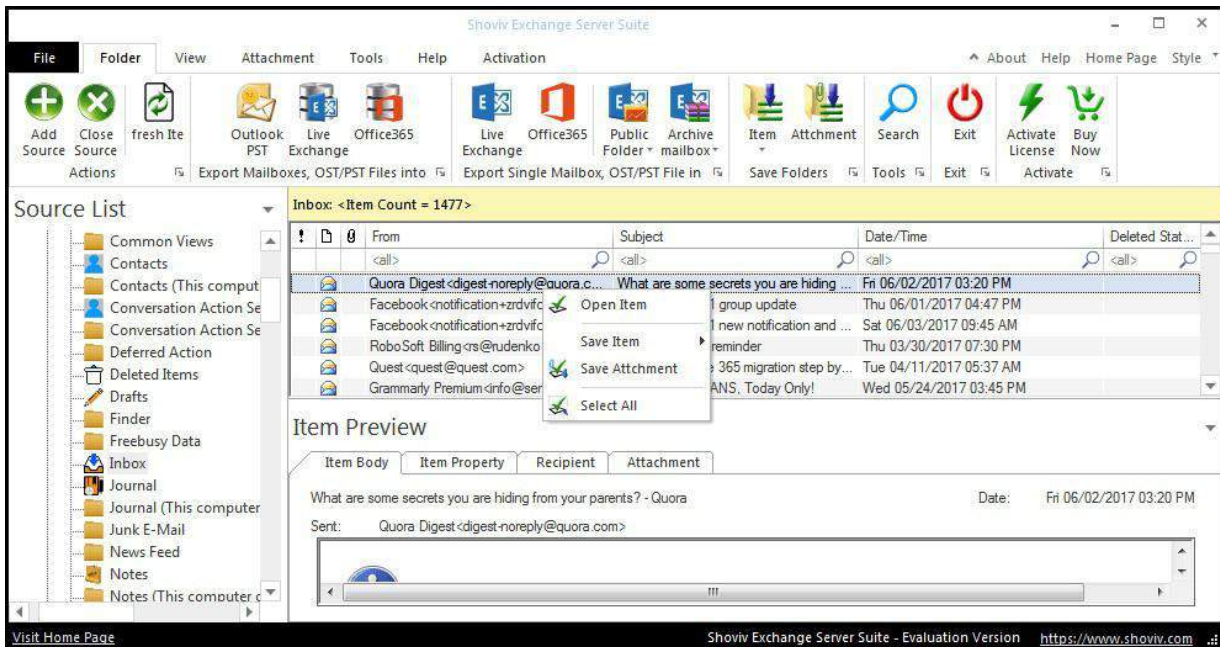

- **Export Single Mailbox in Live Exchange : -**
 - **Mailbox:** - Export Source mailbox into Live Exchange.
 - **Public Folder:** - Export Source mailbox into Live Exchange Public folder.
 - **Archive Mailbox:** - Export Source mailbox into Live Exchange Archive Mailbox.

- **Export Single Mailbox in Office 365 : -**
 - **Mailbox:** - Export Source mailbox into Office 365.
 - **Public Folder:** - Export Source mailbox into Office 365 Public folder.
 - **Archive Mailbox:** - Export Source mailbox into Office 365 Archive Mailbox.

Item View

Item View displays the source items which is available inside the folder of source mailboxes. The item view comprises of options -

- **Open Item** - Open Item with default program to preview i.e, email item with Outlook.
- **Save item** - To save email items into the disk in various formats such as .eml, .msg, .html.

Add Source

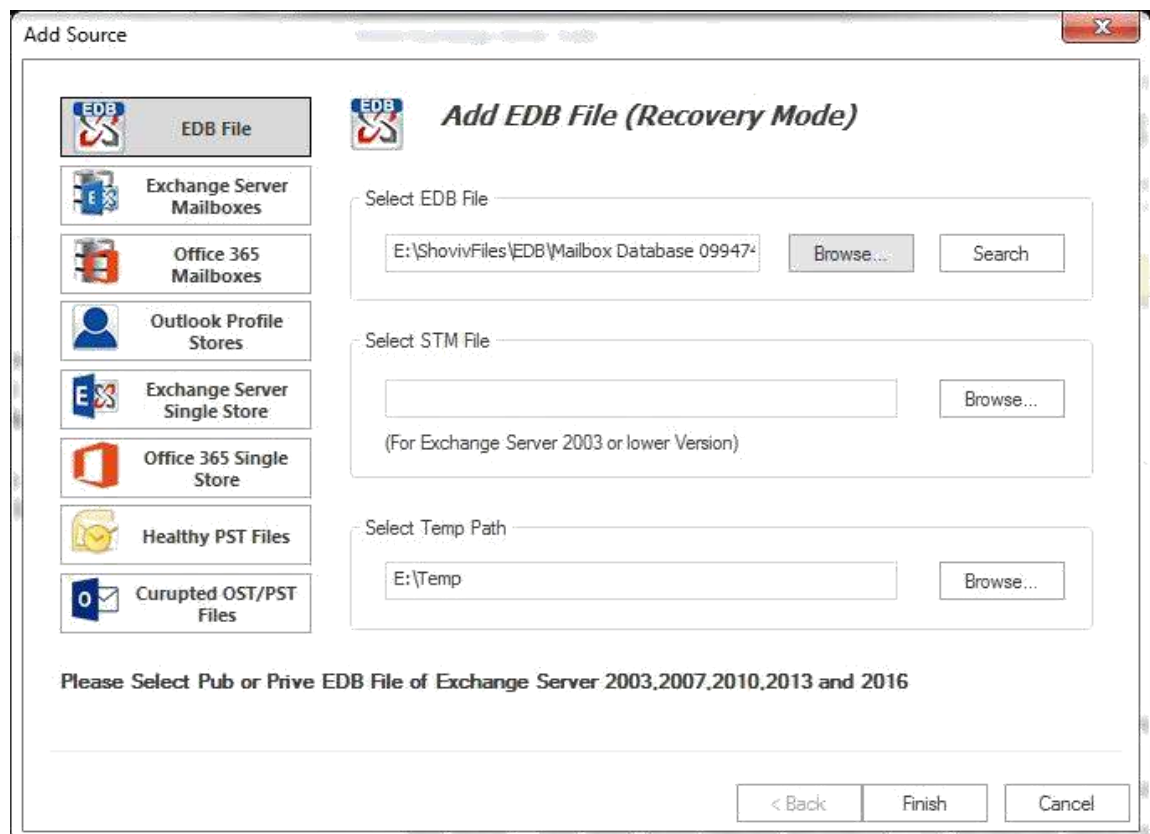

There are two options available to add the desired mailbox or sources which are required for recovery/migration. The source mailboxes can be added using two ways :

- **The first** way is by adding the source through the ribbon bar. You are required to go to the ribbon bar and click on the "**Add Source**" option for adding sources such as EDB mailbox, Exchange server mailbox, Office 365 mailbox, Outlook Profile stores and Exchange/office365 single store into the software.
- **The second** way is by right clicking on the folder list. A context menu will appear in which '**Add Source**' option will be available for you along with other options. The **Add Source**" option add sources like EDB mailboxes, Exchange server mailbox, Office 365 mailbox, Outlook Profile stores and Exchange/office365 single store to the software.

After opening the add source dialog, you will get six options to add the different types of source files which are as follows -

1. EDB File

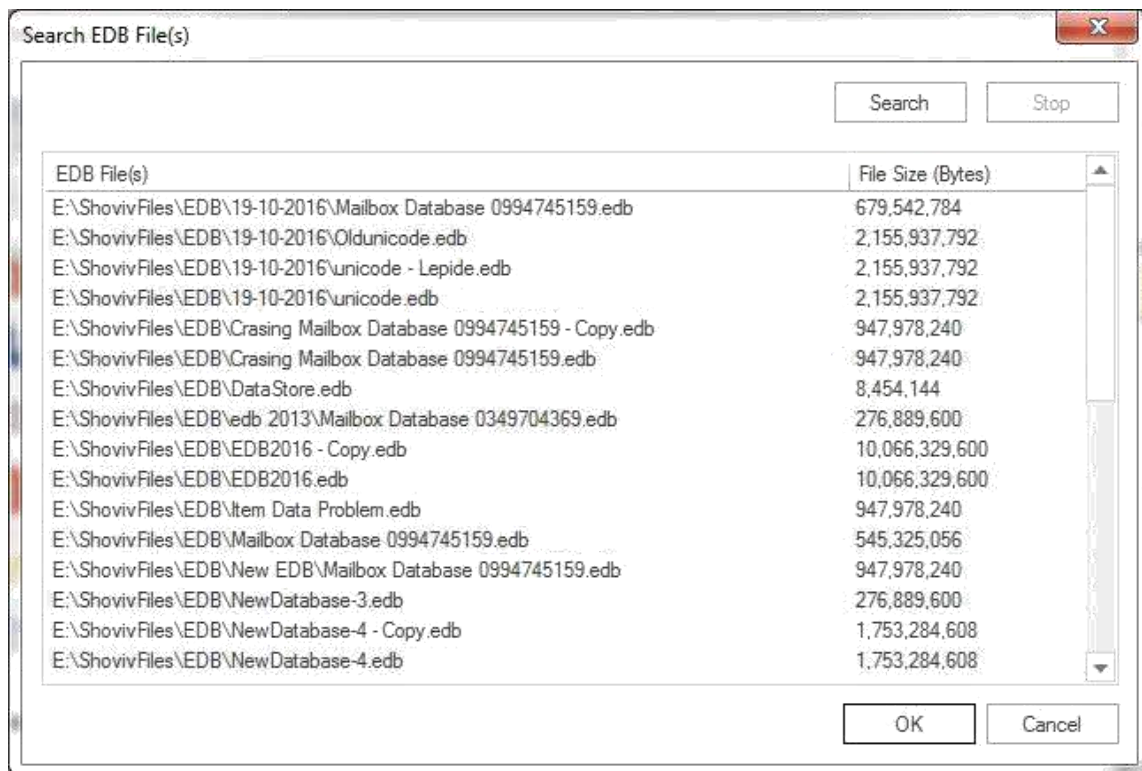

To add EDB file into the software

Shoviv Exchange Server Suite

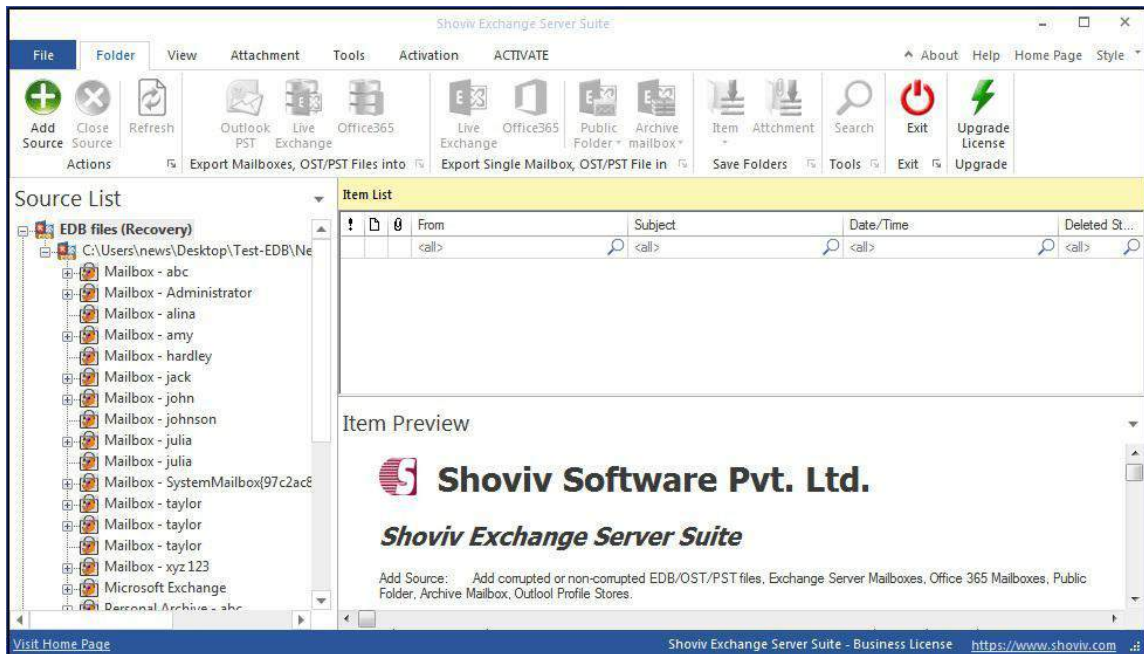

- **Select EDB file** - Select EDB file using '**Browse...**' button from local disk
- **Search** - To search EDB files from the specific directory on disk using '**Search**' button..

Shoviv Exchange Server Suite

- **Select STM file** - For the lower version of exchange server i.e. Exchange server 2003.
- **Select temp path** - To store temporary data during recovery process of EDB file by the software.

After that, click on **'Finish'** Button. All EDB file Mailboxes will be shown in **'Source List >> EDB File'** Section.

2. Exchange server mailboxes

To add Live exchange server mailboxes into the software in order to save and export process.

- **Domain name of Domain IP** - Server Name or IP address of Domain server where your Active Directory is installed.
- **UserName** - Username of the user who has administrative rights.
- **Password** - Password of the respective AD user.

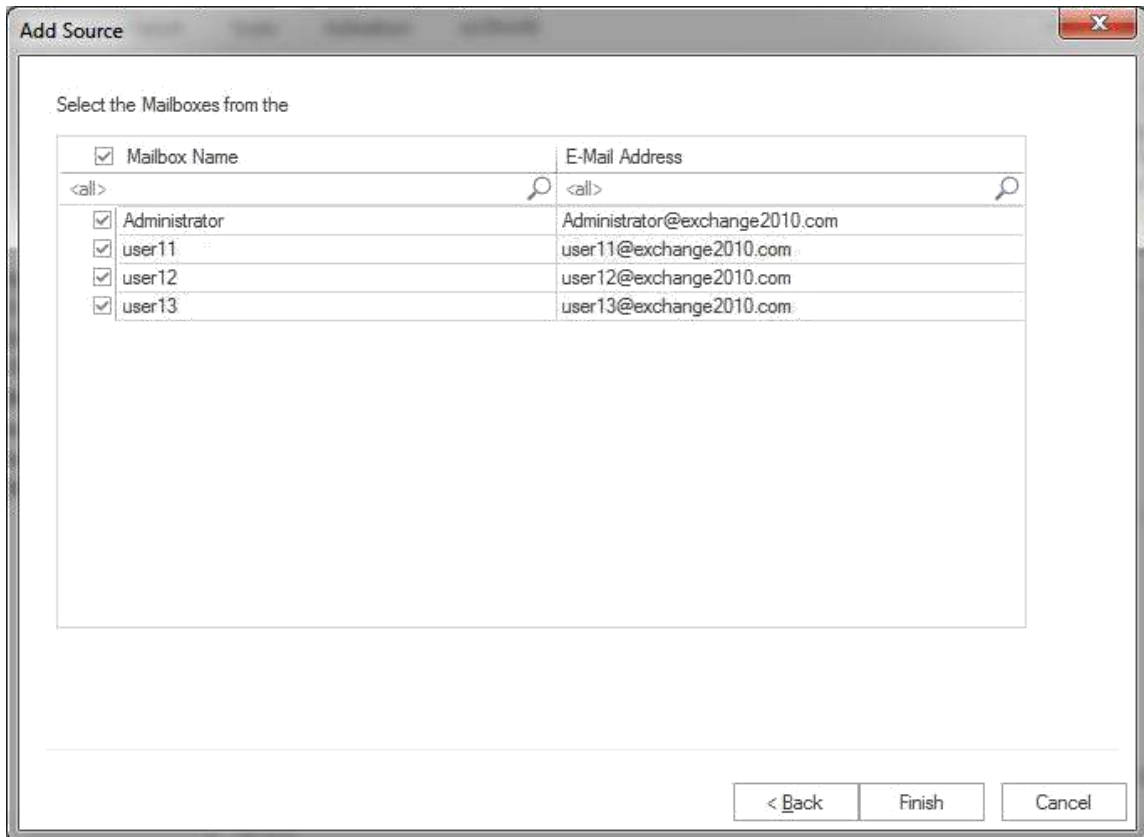

The screenshot shows the 'Add Source' dialog box with the 'Add Exchange Server Mailboxes' section active. The left sidebar lists various source types, including EDB File, Exchange Server Mailboxes (selected), Office 365 Mailboxes, Outlook Profile Stores, Exchange Server Single Store, Office 365 Single Store, Healthy PST Files, and Corrupted OST/PST Files. The main area contains three input fields: 'Domain Name or Domain IP' (192.168.0.22), 'User Name' (administrator), and 'Password' (masked). A note at the bottom states: 'Please Enter Active Directory Domain Credential to Fetch all Mailboxes.' The bottom right corner has '< Back', 'Next >', and 'Cancel' buttons.

2. Select mailboxes :

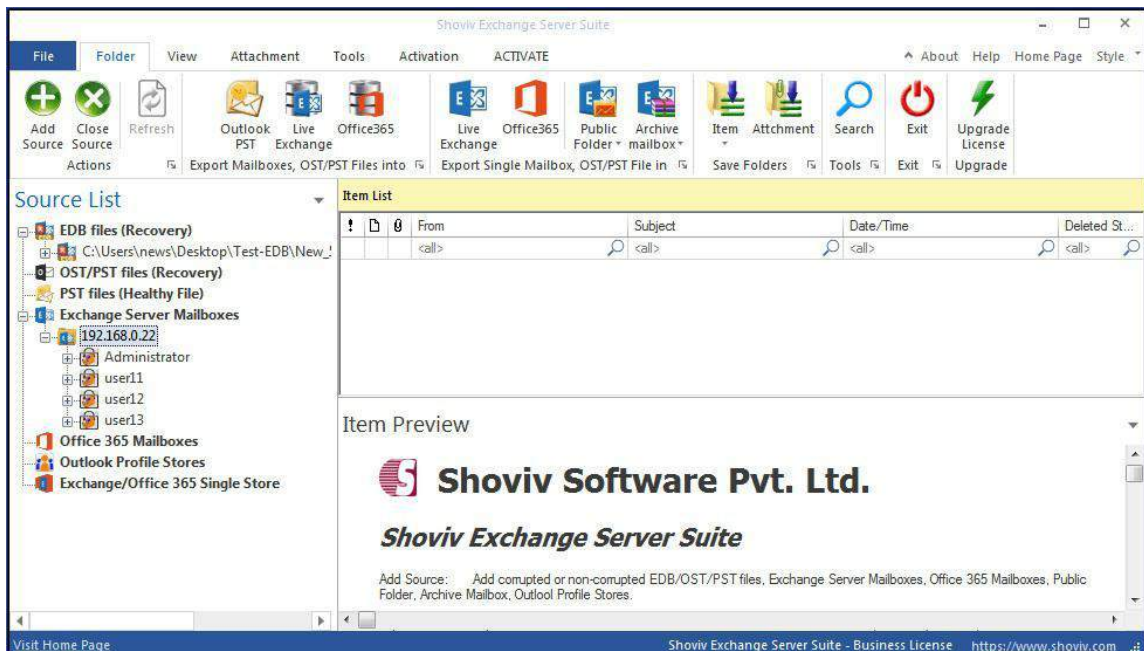

- Select mailboxes which you want to export or perform migration process. Those mailboxes will be added to the software folder view with proper folder hierarchy.

Shoviv Exchange Server Suite

- After that, click on '**Finish**' Button. All Exchange server Mailboxes will be shown in '**Source List >> Exchange server Mailboxes**' Section.

3. Office 365 Mailboxes

To add Office 365 mailboxes into the software in order to save and export process.

- **Office 365 Username** - Username of Office 365 Administrator and ensure that all other users has given there mailbox delegate rights to this user.
- **Password** - Password of the respective user.

6. Office 365 Single Store

To add Office 365 single user mailbox in order to save and export items.

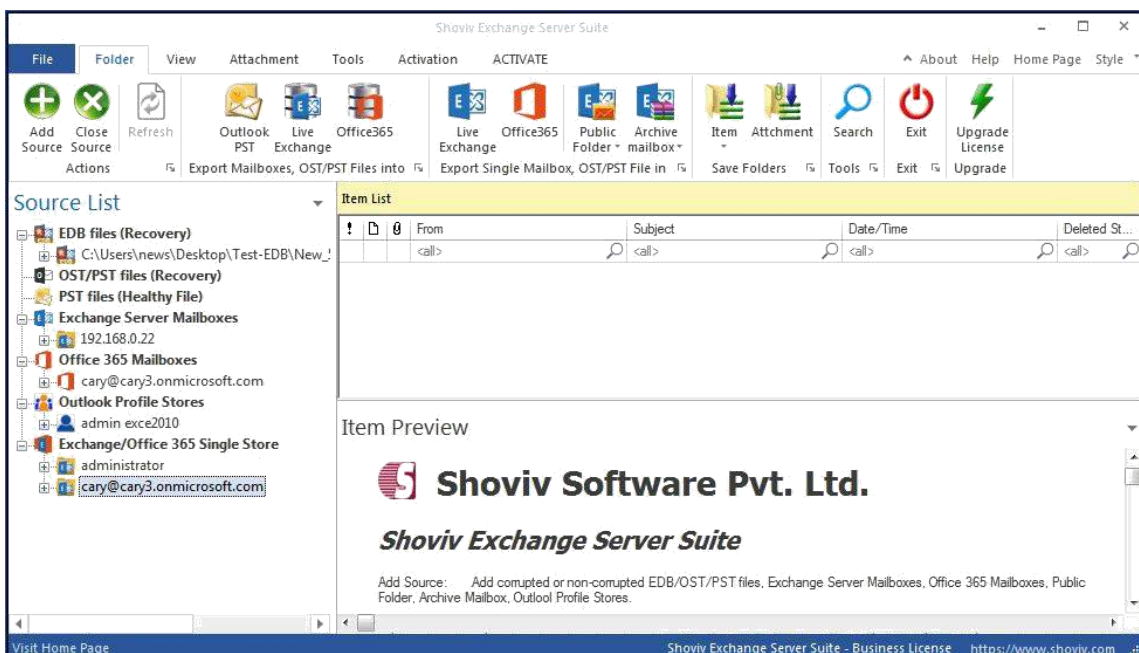

- **Store type** - Select Store type of desired mailbox i.e. Public folder/Archive mailbox of the respective mailbox.
- **User Name** - Name of Office 365 user mailbox.
- **Password** - Password of the respective user mailbox.

Shoviv Exchange Server Suite

- After that, click on '**Finish**' Button. All Office 365 single Mailbox will be shown in '**Source List >> Exchange/Office 365 Single Store**' Section.

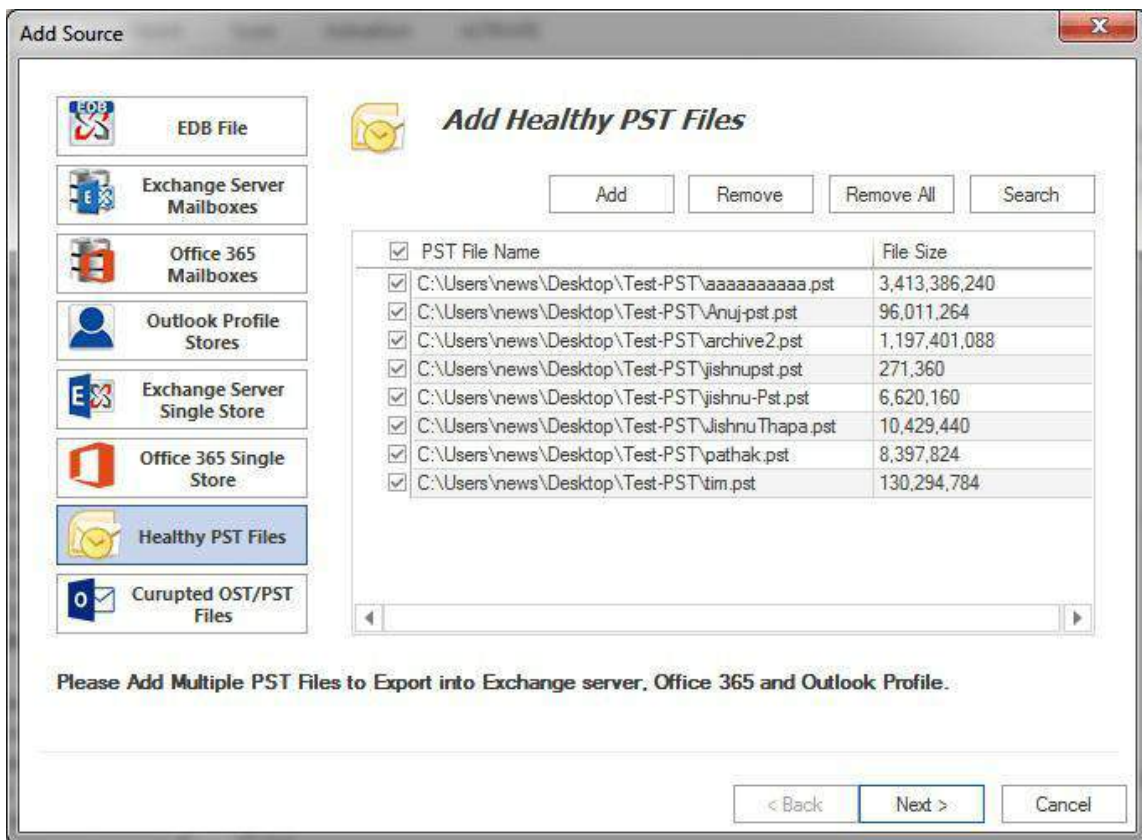

7. Add Healthy PST files

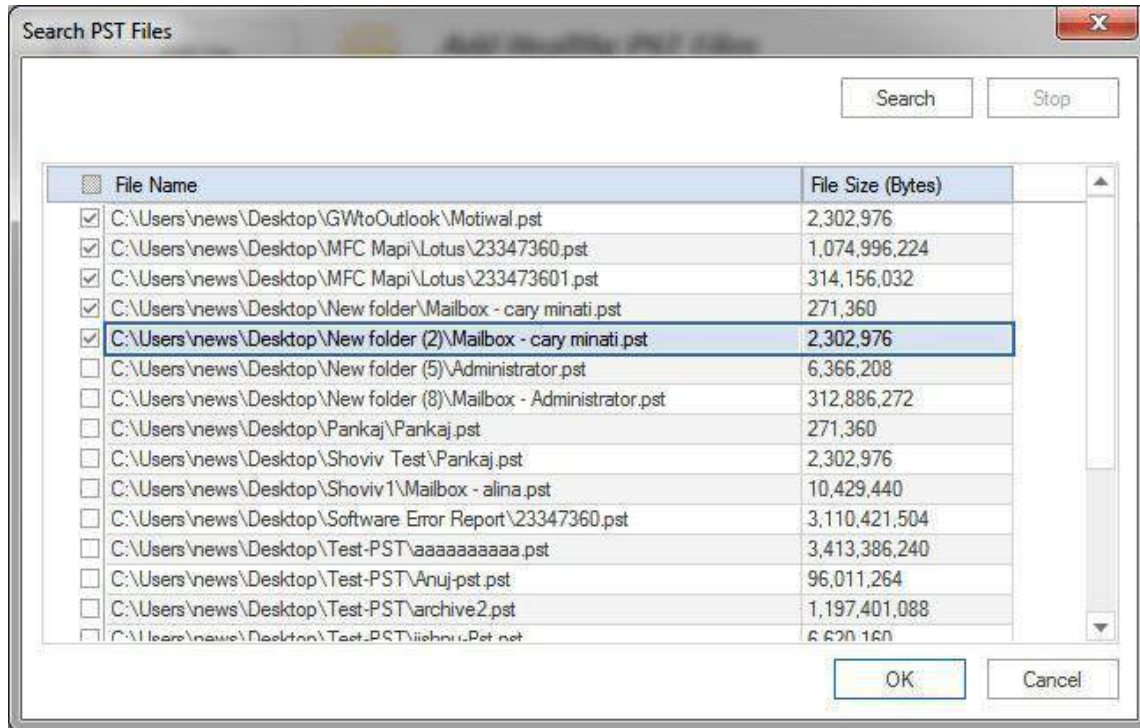

To add healthy PST file into the software.

- **Add** : To add healthy PST file(s) into the software from file directory using file browse dialogue.
- **Remove** : To remove selected PST file(s) from the added list.
- **Remove All** : To remove all the added PST file(s) from the list.
- **Search** : To search PST file(s) from selected file directory.

2. Search :

- This option is useful in case you don't know the exact location of your PST file(s). You can search PST file(s) from selected file directory using this option and can select only desired PST file(s) for further process.

3. Add PST :

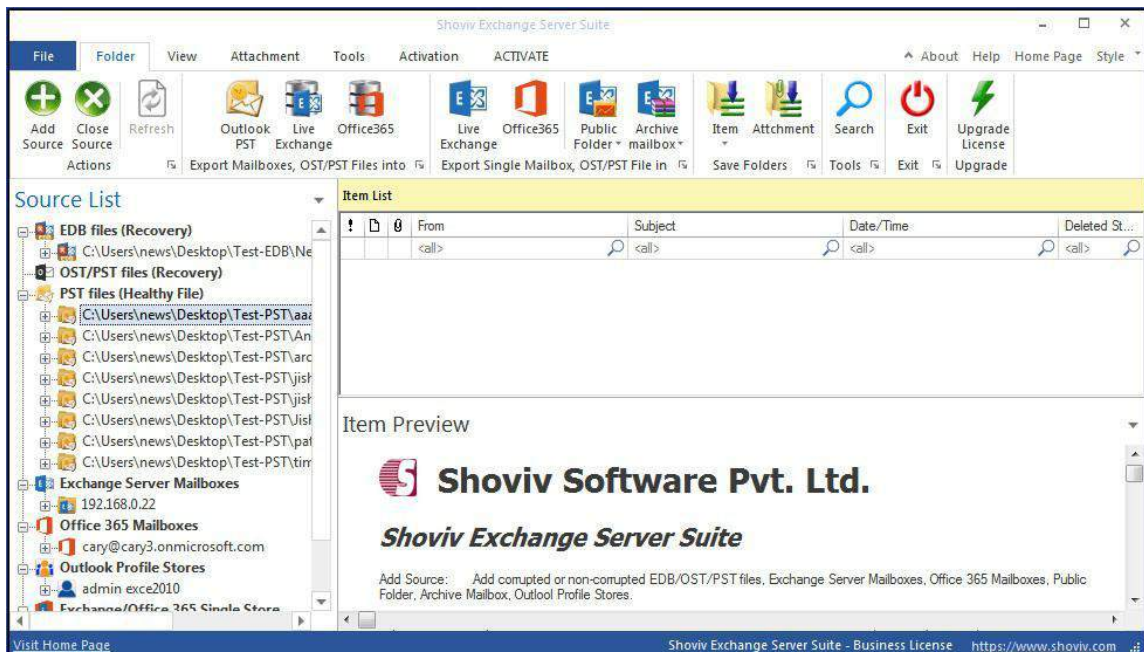

- Once you done with adding PST files into list, click on "ok" button. This will start adding your selected PST files into the software and display you the status. You can stop adding process anytime using "Stop" button.

Shoviv Exchange Server Suite

- After adding process complete, click the "Finish" button. You can find your added PST files under "PST Files (Healthy PST)".

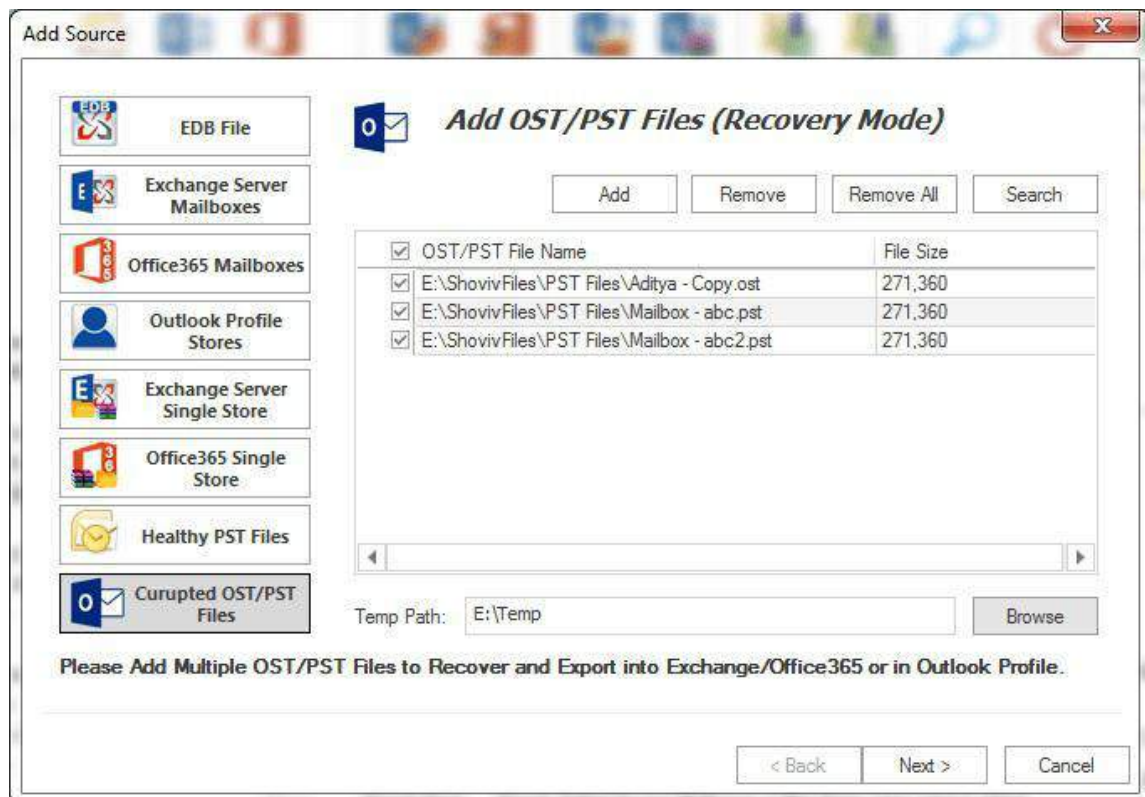

8. Add OST/PST Files

To add corrupted OST/PST Files into the software.

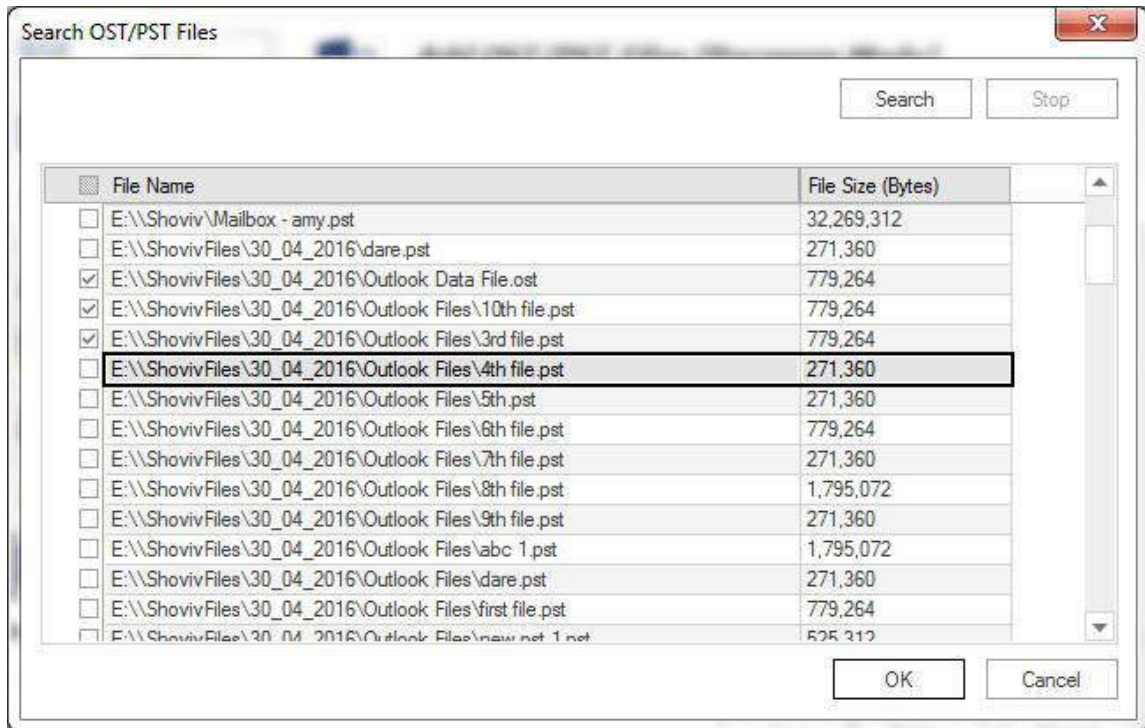

- **Add** : To add corrupted OST/PST file(s) into the software from file directory using file browse dialogue.
- **Remove** : To remove selected corrupted OST/PST file(s) from the added list.
- **Remove All** : To remove all the added corrupted OST/PST file(s) from the list.
- **Search** : To search corrupted OST/PST file(s) from selected file directory.
- **Temp Path** : To store temporary data during recovery process of OST/PST file(s) by the software.

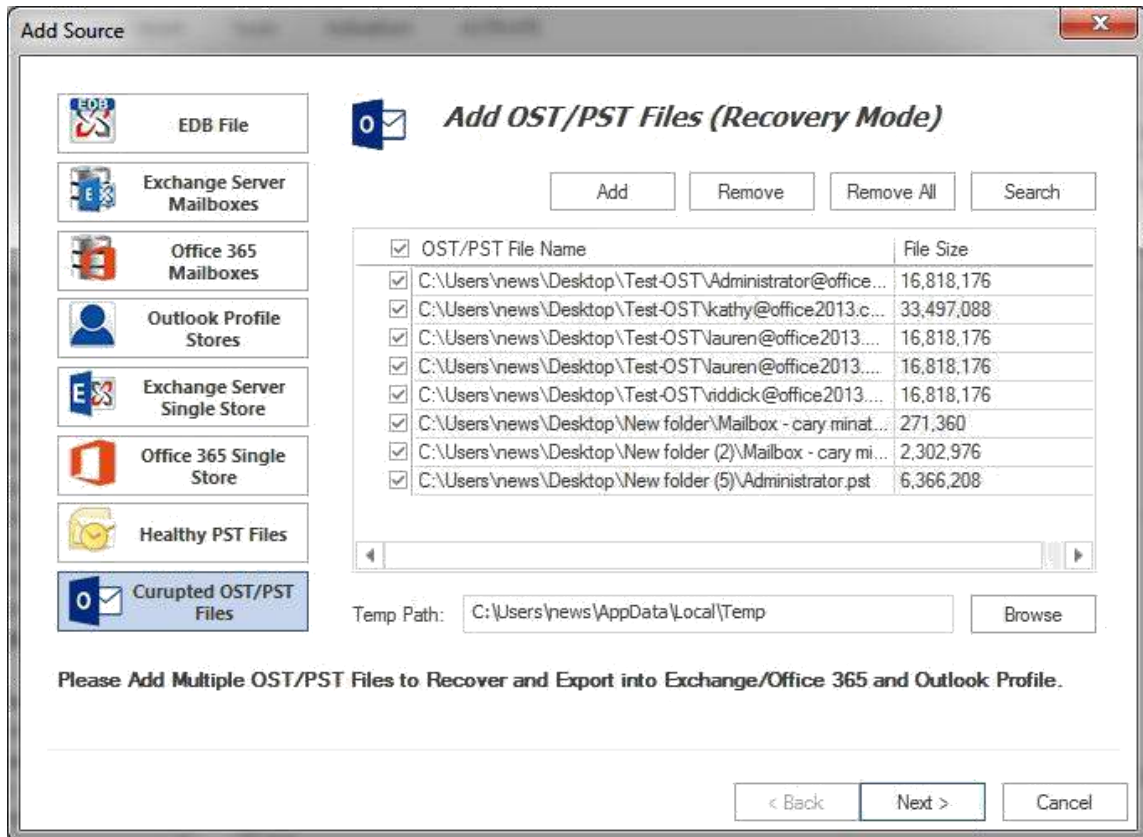

2. Search :

- This option is useful in case you don't know the exact location of your OST/PST file(s). You can search OST/PST file(s) from selected file directory using this option and can select only desired PST file(s) for further process.

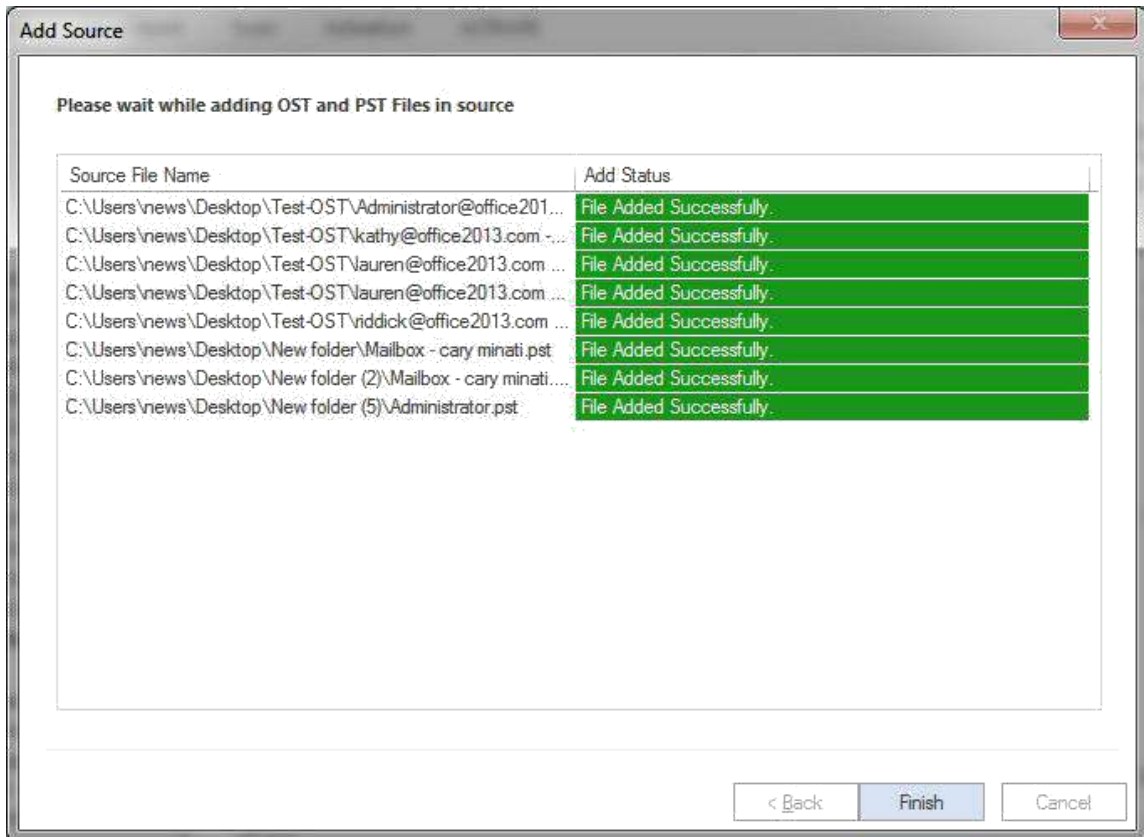

3. Add OST/PST files :

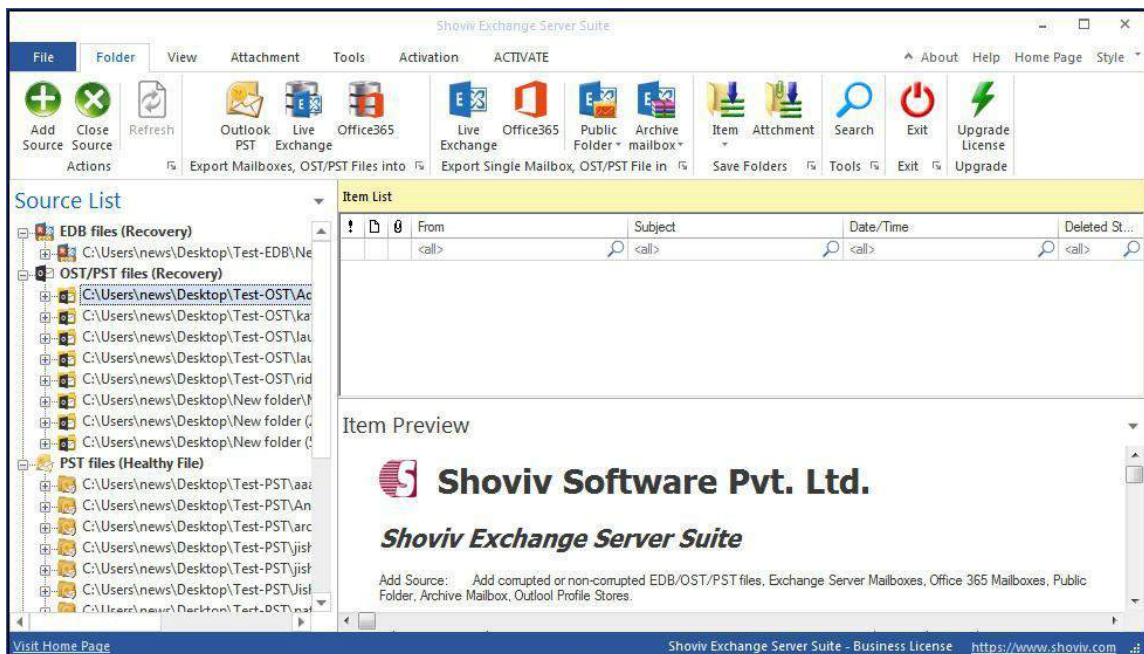

- Once you done with adding OST/PST files into list, click on "ok" button. This will start adding your selected OST/PST files into the software and display you the status. You can stop adding process anytime using "Stop" button.

Shoviv Exchange Server Suite

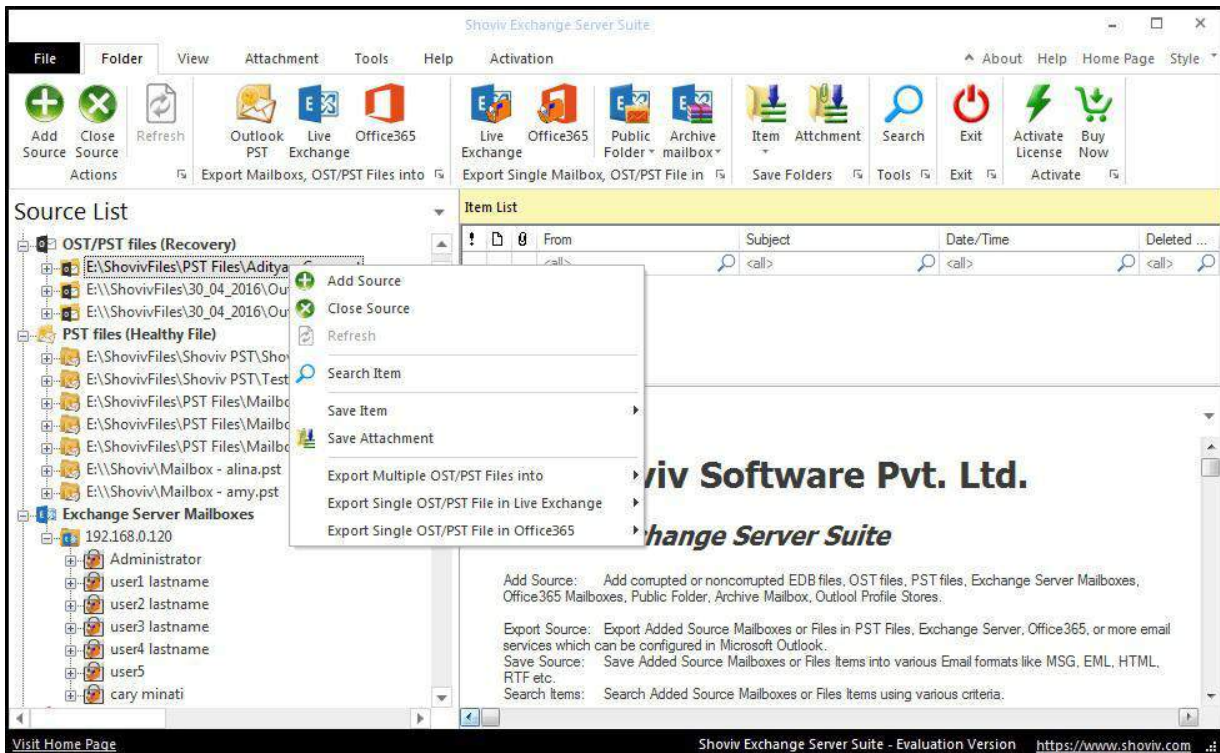

- After adding process complete, click the **"Finish"** button. You can find your added OST/PST files under **"OST/PST Files(Recovery)"**.

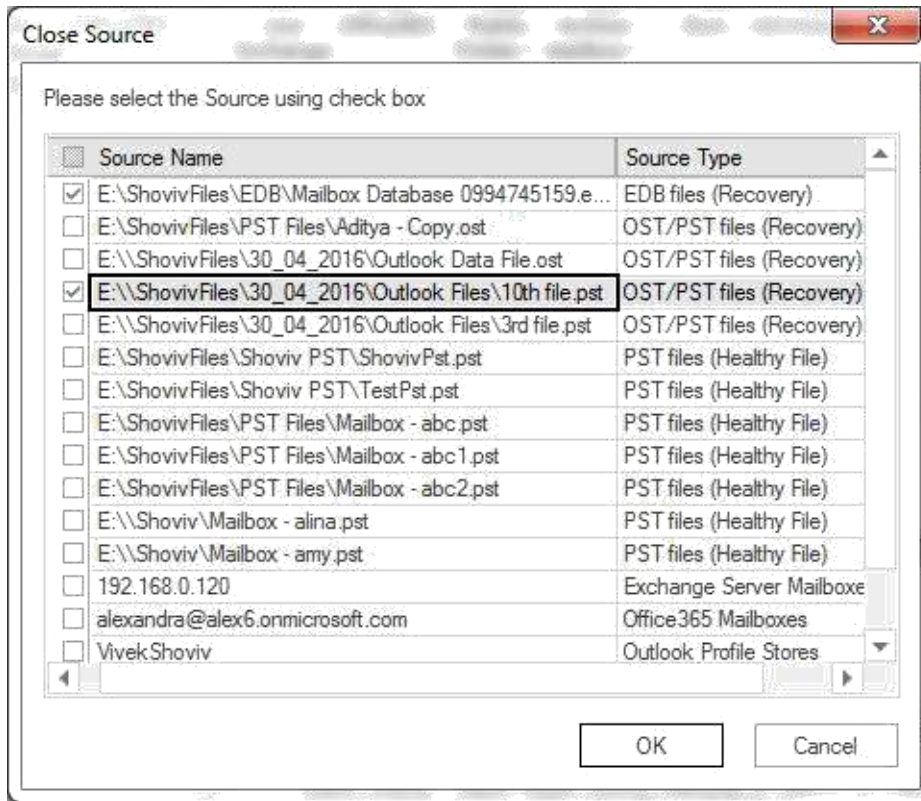

Close Source

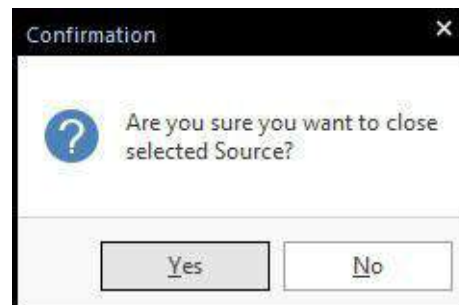

This option is provided to close the source. There are generally two ways which are given in the application through which you can remove files or close the added source.

- **First** way is by going to the ribbon bar and click on close source options which will close the source.
- **Second** way is by right clicking on the folder list. A context menu or pop-up menu will appear. Here, the user can select close source option from the context menu and close the source the user willing to close.

- After click on 'Yes' button, selected source will be closed.

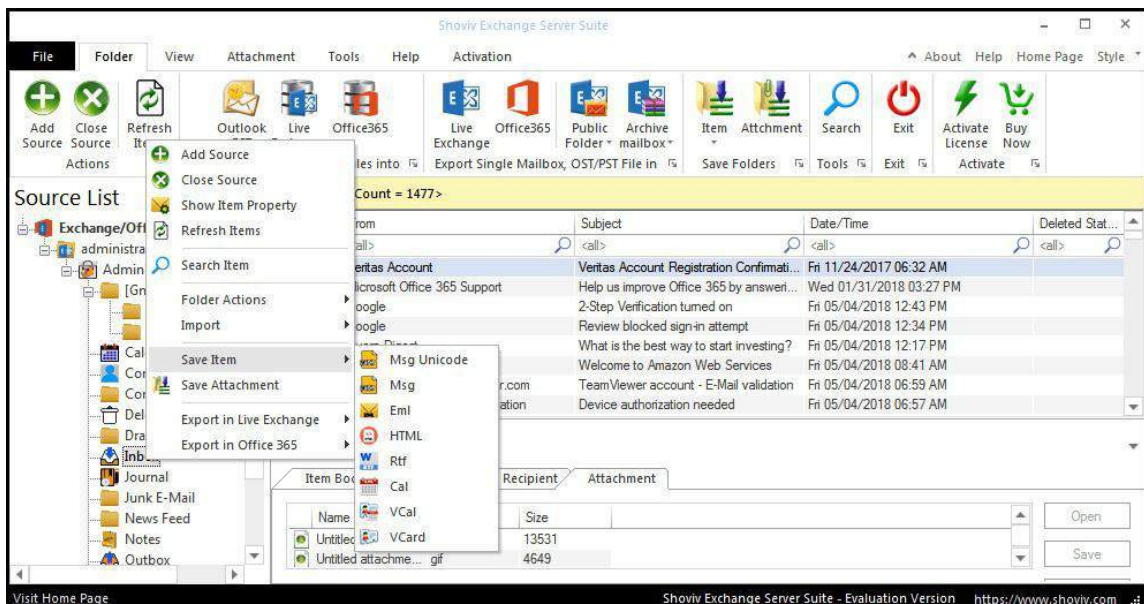

Save Item From Folder View

Note - Here we will only describe how to save items from selected EDB mailboxes. Same steps will be applicable for other added sources.

Save item: Save item option allows to save items into various formats such as EML, MSG, HTML, VCARD, VCAL, CAL, RTF, etc.

- In this option, one can go to the folder list and right click on the list. A context menu will appear in which you can select the '**Save items**', and save into different formats such as MSG, EML, HTML, VCARD, VCAL, CAL, RTF, etc.

1. After click on save item option, a dialog wizard box will pop up in which you can check/uncheck on folders which you want to.

- **Check/Uncheck sub folder :** Checking this option automatically checks all sub-folders under checked folder or vice versa.

2. After click on Next button, a filter page will be showing in which there are two options available to save items on the disk.

- **Process Message Class:** The message class filter option allows to add message class using add button. In this option, you can include or exclude the message class.

After clicking on add button, a message class dialog box will pop-up. The message class dialog box will show some default messages inside the dialog box. To add new message class, you are required to type on the message class in the edit box provided to add new message class. Click on add button to add a new message class.

The default message cannot be removed from the dialog box which contains message class. You can only remove the added message class from the dialog box.

- **Process Date Range:** This option allows you to filter the message according to the date range.

- **Exclude Inaccurate Item:** To exclude inaccurate items, Check "Exclude Inaccurate Item". This option is only applicable for EDB mailboxes. Click '**Next**' in the wizard box to continue.

Shoviv Exchange Server Suite

1. After selecting a file format, the 'List Item Save' dialog will appear. The 'List Item Save' dialog has three options '**Select Target**' or '**Create folder hierarchy by**' option and '**Save type**'.

- **Select Target:** The select target option allows user to give the desire target location anywhere is the system by selecting the browse option and giving the desired target a location to get save.
- **Create folder hierarchy by:** Create folder hierarchy option is also divided in two section as per the given preference criteria, **Folder name** and **Message date** so that, you can 'Check/Uncheck' and save items according to your need.
 - **Folder name :** If user would like to create folder hierarchy, then user need to 'check' on the '**Folder Name**' option. Software will create a folder hirarchy of saved items according to mailbox folders and items will be saved into the folder hirarchy.
 - **Message date :** If user would like to create the folder hierarchy according to the message date, then user need to select on the Message date option. Software will create a folder hirarchy of saved items according to '**Message Date**' and items will be saved into the folder hirarchy.

Shoviv Exchange Server Suite

- **Save Items** : Save items contains the different file format in which, you can save the items in MSG, EML, HTML, VCARD, VCAL, CAL, RTF, etc.

2. After the details have been fulfilled, start the process and click **OK** once the process has been completed successfully.

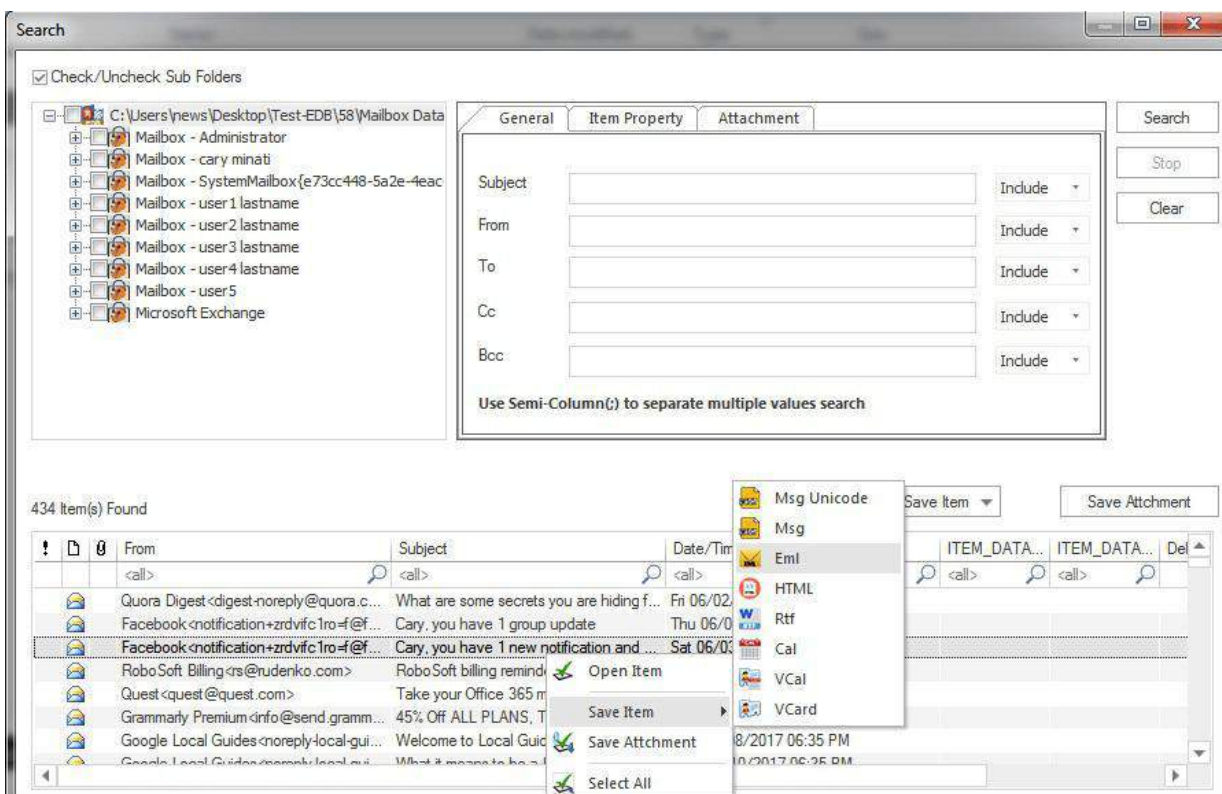

Save item from search view

Note - Here we will only describe how to save search items from selected EDB mailboxes, same steps will be applicable for other added sources

The search view option allows you to search the multiple items added using various criteria such as general, item property and attachments. The search option also allows search based upon subject, from, cc, to, bcc and read or unread message.

Save Items : The Save item option allows you to save items into various email formats such as EML, MSG, HTML, VCARD, VCAL, CAL, RTF, etc.

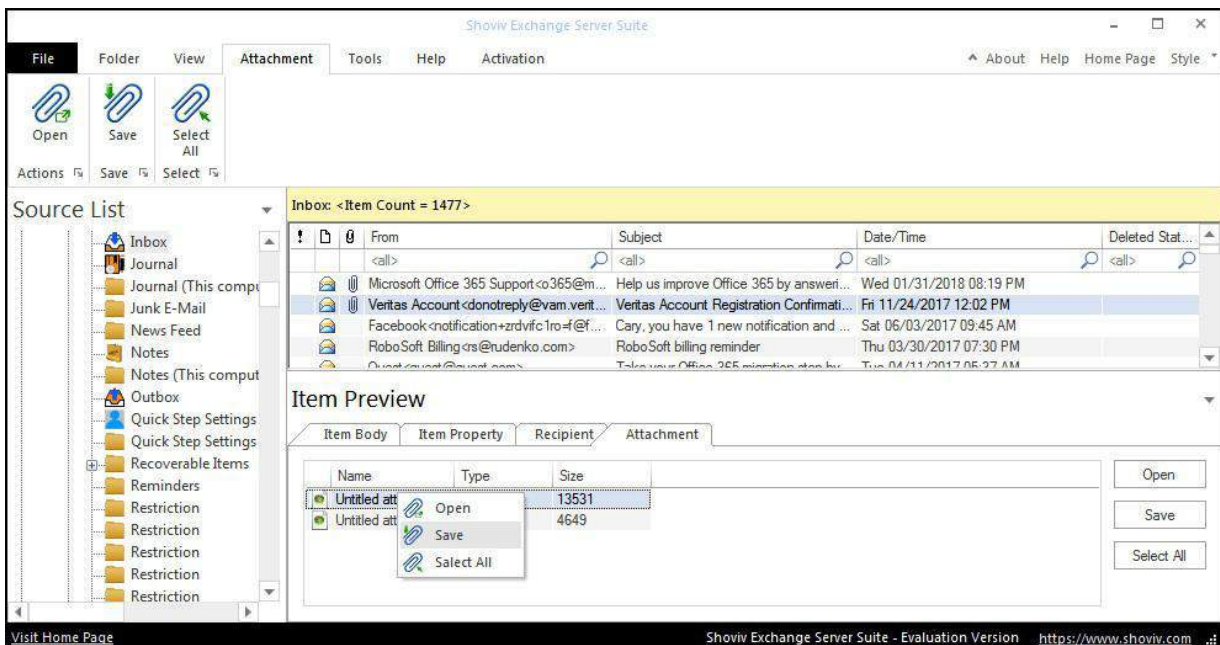

Save Attachments Form Item Preview

Note - Here we will only describe how to save Attachments from selected EDB mailboxes, same steps will be applicable for other added sources

Save attachments from item preview provides the option to save the attachment which is displayed in the item preview option.

1. **First option** - Go to the ribbon bar and select '**Attachment >> Save >> Save**' option present in the ribbon bar.
2. **Second option** - Select the displayed messages and click on the attachment tab which is given below in item preview. You can click on the attachments, save and open the item attachment. '**Select all**' helps you to select all attachments in one go.

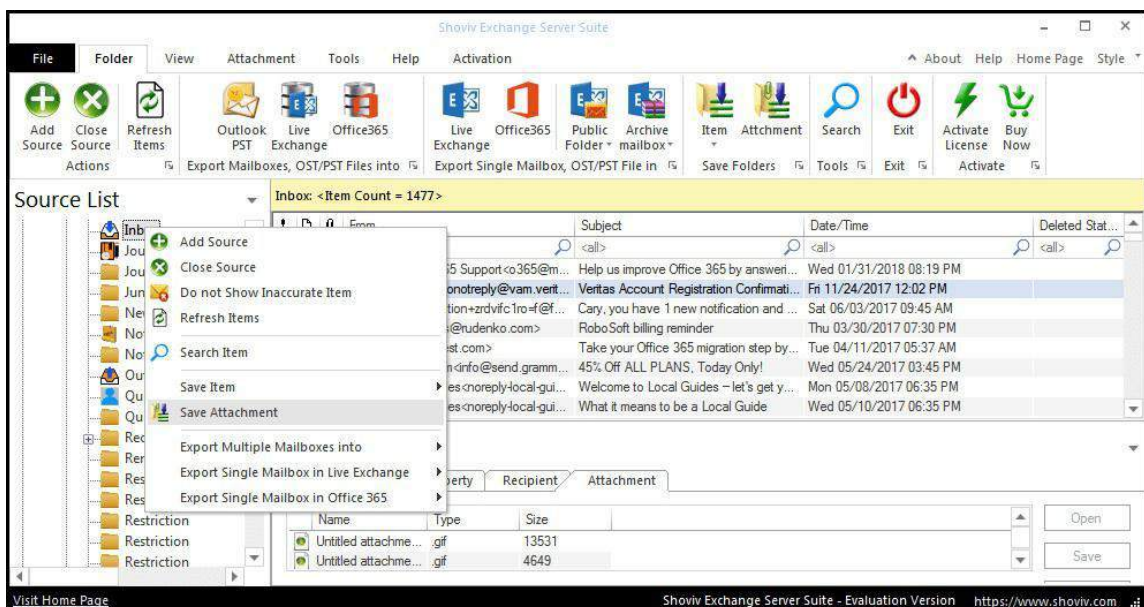

Save Attachments From Folder View

Note - Here we will only describe how to save Attachments from selected EDB mailboxes, same steps will be applicable for other added sources

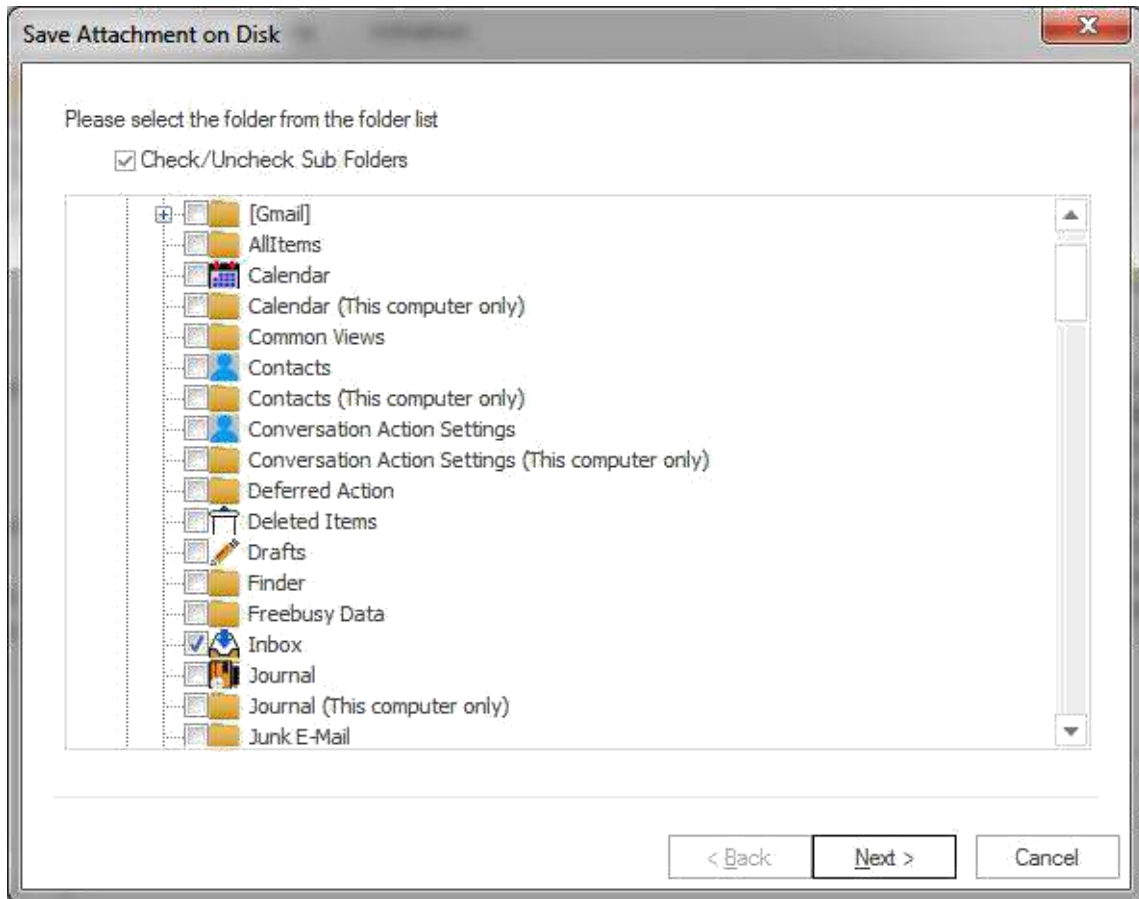

1. There are two different options available to save attachment from the folder view which are as follows:

- **First option** : Go to the ribbon bar and select '**Attachment**' under the '**Save mailboxes**' option.
- **Second option** : Right click on the folder list, a context menu will appear in which user need to select the '**save attachment**' option.

2. After clicking on the '**save attachment**' option, a wizard will pop up in which user need to check and uncheck the folders.

- **Check/Uncheck Sub folders** : Checking this option automatically checks all the sub-folders of checked folder and vice versa.

3. After click on '**Next**' button the filter page is shown in which there are two type of option available to filter out items.

- **Process Message Class:** The message class filter option allows to add message class using add button. In this option, user can include or exclude the message class.

After clicking on add button, a message class dialog box will pop-up. The message class dialog box will show some default messages inside the dialog box. To add new message class, user are required to type on the message class in the edit box provided to add new message class. Click on add button to add a new message class.

The default message cannot be removed from the dialog box which contains message class. user can only remove the added message class from the dialog box.

- **Date Range:** This option allows user to filter the message according to the date. Once the date range has been added

5. After click on Next button, Status will be shown. The Status wizard will show Source Folder, Target Folder, Item Count, Filtered Items, Copied Items and Process Item in report.

- **Stop button**—The stop button allows user to stop all process immediately.
- **Save report:** The save report button allows user to save report of the process into html file.

Shoviv Exchange Server Suite

After the processing has been completed, a finish button will be enabled. user can click on the finish button and end the process after the process is successfully completed.

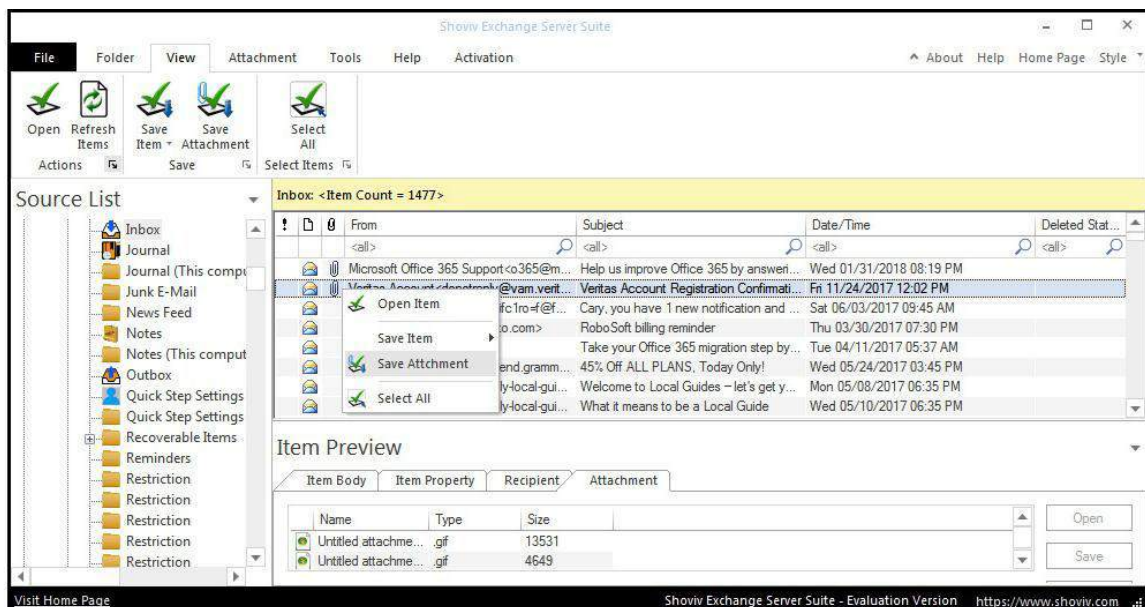

Save Attachments From Item View

Note - Here we will only describe how to save Attachments from selected EDB mailboxes, same steps will be applicable for other added sources

For saving the attachment from the items view there are generally two methods available with the help of which the items attachments can be saved.

Step 1:

- **First option-** Go to the ribbon bar and then select the '**View >> Save >> Save Attachment**'.
- **Second option-** Right click on the item list. After right click on the item list, a context menu will appear in which user can select '**Save Attachment**' option.

Step 2:

- **Select Target :** Select target option allows user to give the

Shoviv Exchange Server Suite

desired target location anywhere in the system by selecting the browse option and giving the desired path to save the attachment.

- **Folder name** : If user would like to create folder hierarchy, then user need to 'check' on the '**Folder Name**' option. Software will create a folder hirarchy of saved items according to mailbox folders and items will be saved into the folder hirarchy.
- **Subject Name**: If user would like to create the folder hierarchy according to the Subject Name, then user need to check on the Subject Name option. Software will create a folder hirarchy of saved items according to '**Subject Name**' and items will be saved into the folder hirarchy.
- **Message date** : If user would like to create the folder hierarchy according to the message date, then user need to check on the Message date option. Software will create a folder hirarchy of saved items according to '**Message Date**' and items will be saved into the folder hirarchy.

A screenshot of a Windows-style dialog box titled "List Attachment Save". The dialog has a standard title bar with a close button (X). It contains two main sections. The first section, "Select Target", has a text input field containing the path "C:\Users\news\Desktop\New folder (10)" and a "Browse..." button to its right. The second section, "Create Folder Hierarchy by", contains three radio button options: "Folder Name" (which is checked), "Subject Name", and "Message Date". Below the "Message Date" option is a date format dropdown menu showing "%d-%m-%y" and a text input field containing "26-05-18". At the bottom right of the dialog are "Start" and "Cancel" buttons.

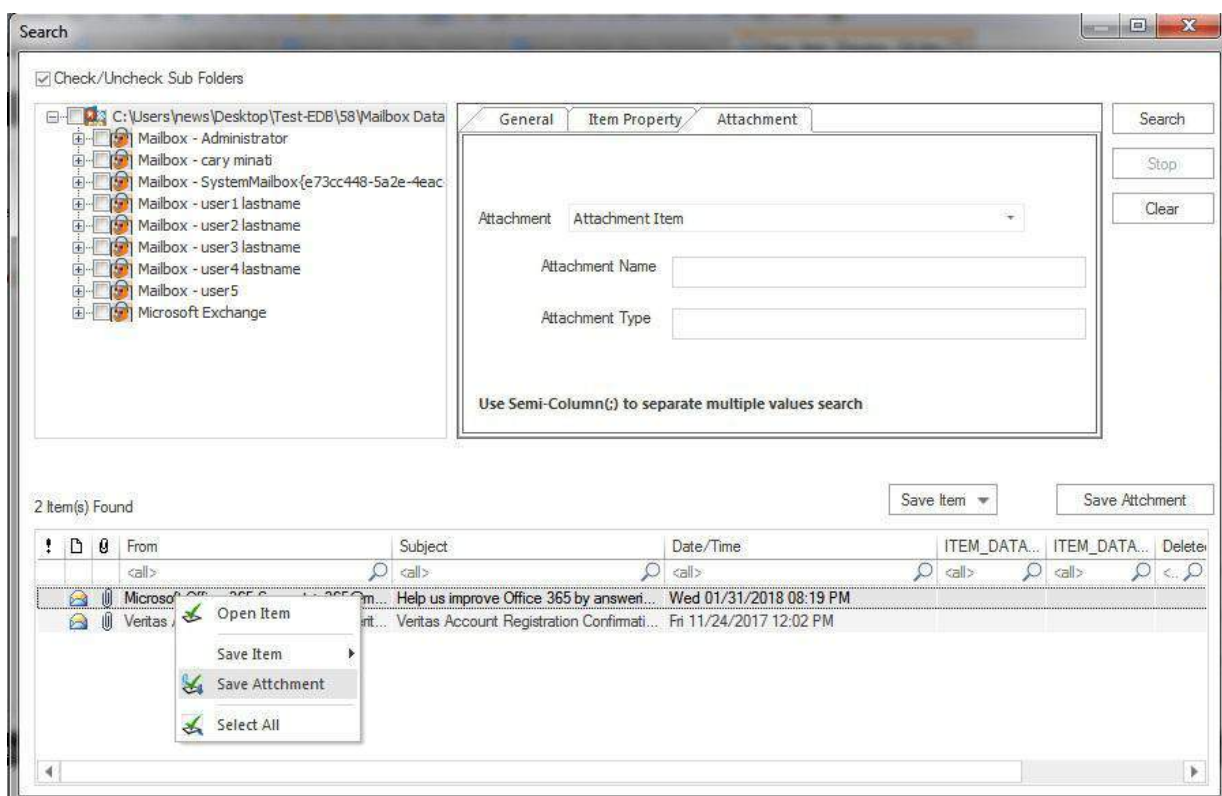

After the options has been selected, you can run the process by clicking "**Start**".

Save attachment from search view

Note - Here we will only describe how to save attachments from selected EDB mailboxes, same steps will be applicable for other added sources

With the search view option, you can search the items added using various criteria such as general, item property and attachments. The search option also allows to search based upon subject, from, cc, to, bcc and read or unread message.

Save Attachment: You can save attachment from the search result. When users click on the search view on the ribbon bar, a dialogue box will pop-up in which the users need to click on the check/uncheck on sub folder option and then the right click on list view to save attachment.

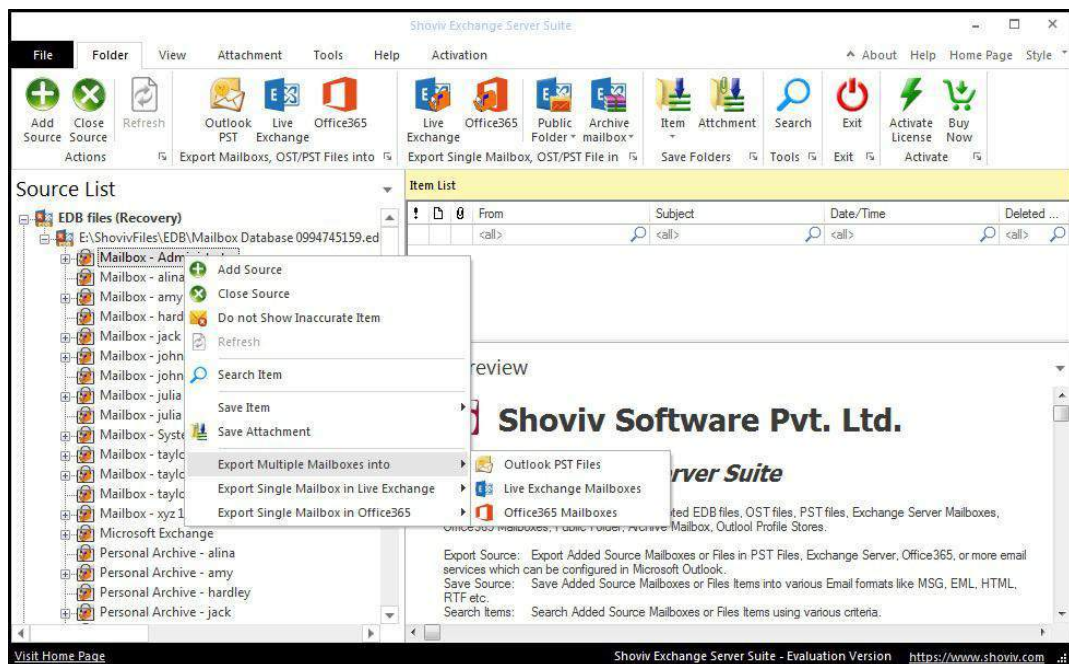

Export Single Mailbox in Live Exchange

Note - Here we will only describe how to Export Single EDB Mailbox in Live Exchange server. Same steps will be applicable for other added sources

To Export the added source single mailbox in Live Exchange, there are two options available :

- **First option** : By going to the Ribbon bar and Click on the **"Export Single Mailbox >> Live Exchange "**option from the ribbon bar.
- **Second option** : By Right click on the folder list. A context menu will appear on which you can click on **"Export in Live Exchange mailbox >> Single Mailbox"**.

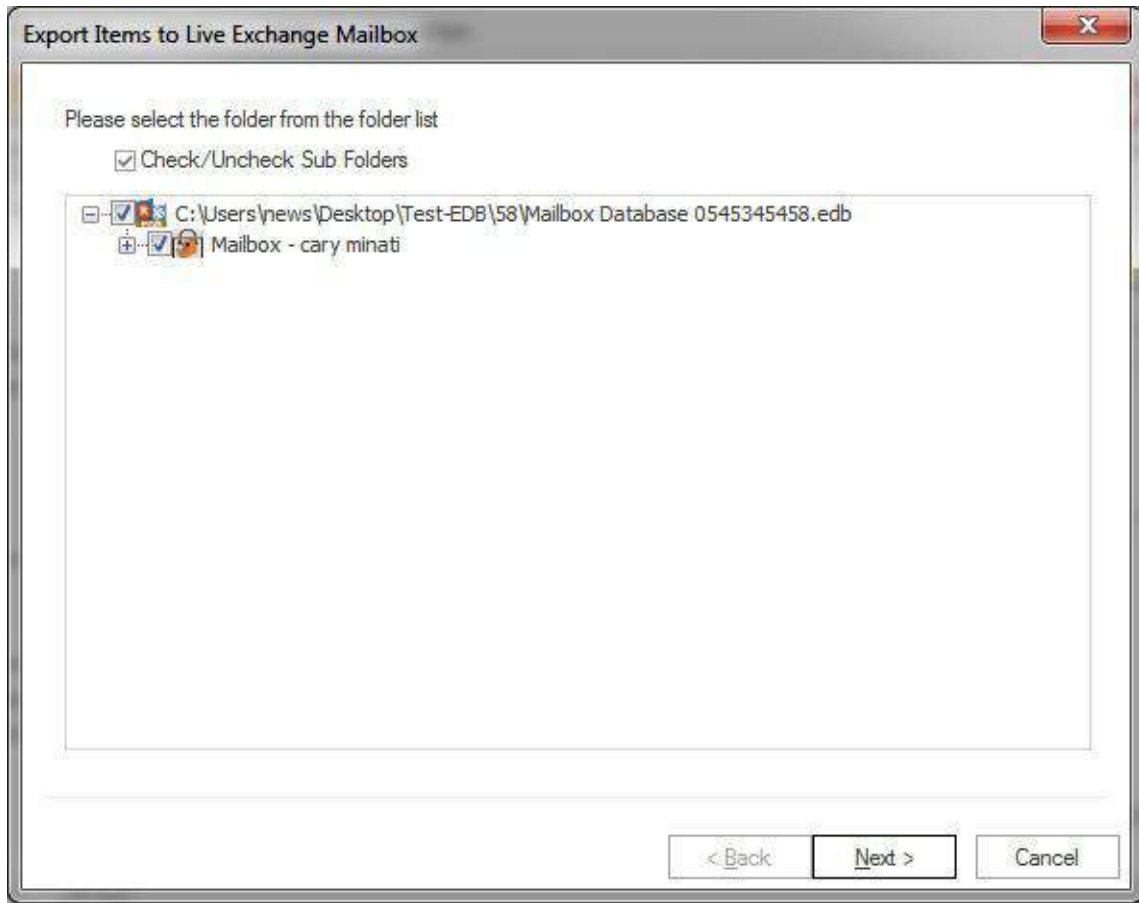

2. After click on the **'Export mailboxes live exchange'** option, a

dialog wizard box will pop up in which you will find the option **Check/Uncheck Sub folders**.

- **Check/Uncheck Sub Folder** : Checking this option automatically checks all the sub-folders of checked folder and vice versa.

3. After click on "**Next**" button, the filter page is shown in which there are two type of option available to Export items to Live Exchange server.

- **Message Class:** Message class filter option allows you to add the message class using add button. In this option, you can include or exclude the message class.

After clicking on the add button, a message class dialog box will pop-up. The message class dialog box will show some default messages inside the dialog box. To add new message class, you are required to type on the message class in the edit box provided to add new message class. Click on add button to add the new message class.

Shoviv Exchange Server Suite

The dialog box is titled "Export Items to Live Exchange Mailbox". It contains the following sections:

- Process Message Class:** A text input field with an "Add" button. Below it are radio buttons for "Include" (selected) and "Exclude".
- Process Item Date:** Two date pickers labeled "From" and "To", both set to "26/05/2018". There are "Add" and "Remove" buttons. Below this is a table with columns "From" and "To".
- Exclude Inaccurate Item:** A checked checkbox with the text "Exclude Inaccurate Item". Below it is a note: "If the required folder's items are improper, as body, attachments, recipients and other properties all are missing."
- Navigation:** Buttons for "< Back", "Next >", and "Cancel".

The default message cannot be removed from the dialog box which contains message class. You can only remove the added message class from the dialog box.

The dialog box is titled "Message Class". It contains the following sections:

- Message Class List:** A list of message classes with checkboxes. The first checkbox is unchecked. The list includes: IPM.Activity, IPM.Appointment, IPM.Contact, IPM.DistList, IPM.Note, IPM.Task, IPM.Journal, IPM.StickyNote, IPM.Post, IPM.Document, and IPM.OLE.Class.
- Add and Remove user define message class:** A text input field with "Add" and "Remove" buttons.
- Navigation:** "OK" and "Cancel" buttons.

- **Date Range** : This option allows you to filter the message according to the date range. After the date range has been added, Click on “**Next**” in the wizard box to continue.
- **Exclude Inaccurate Item** :This option allows you to filter the inaccurate item of edb file. ***This option will be visible only for EDB items.***

Click on the next button to proceed forward with the process.

4. After click on the "Next" button, "Export item to Live exchange mailbox" wizard box will appear which consist two options for the user along with the option to export in Live Exchange mailbox, Live Exchange archive mailbox and Live Exchange public folder.

1. **Migrate to default store:** With this option, you can migrate in the existing outlook profile store.

Search

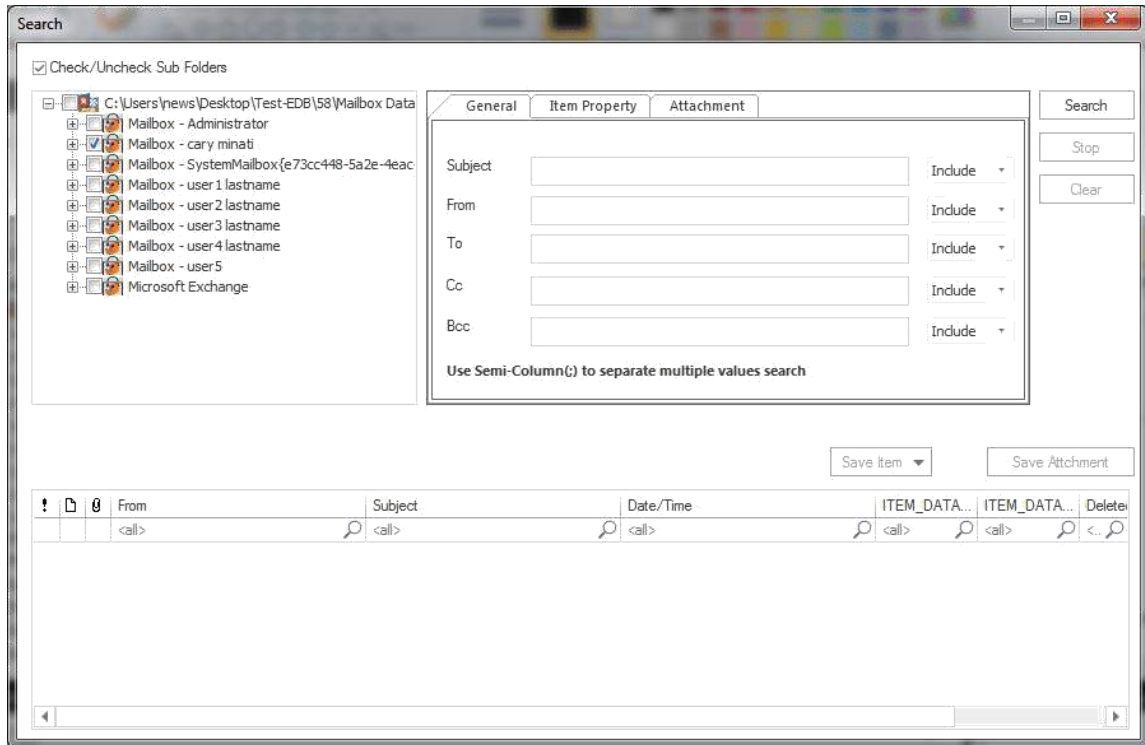

Note - Here we will only describe how to search items from EDB file, same steps will be applicable for other added sources

With this option, user can search the items using various criteria such as general, item property and attachments. The Search is based upon subject, from, cc, to, bcc and read or unread message and if user select item property & attachments, the search will be based on attachment name, attachment type, message class, message date.

There are three different options given for the convenience of the user so that search option can be categorized according to user preference.

- General option
- Items property
- Attachment

- **Check/Uncheck Sub Folder:** With this option, user can click on any check box then the entire child folder will automatically be selected or unselected. The selection can also be made directly by selecting the child folder one by one which user want to save item of.
- user can also read the messages by selecting the check box, then select search in order to read the messages in the preview box.
- If user want to unselect any other folder from the list, then user may do so by clicking on the folder user want to unselect.
- If this option unselected the child folders, then user can click on any child folder in folder list, then particular folder will be selected or un-selected.

1. General Option : General option allows the user to search the item by Subject, cc, to, from and bcc as per their needs. The brief segment of these options and functionalities are given below : -

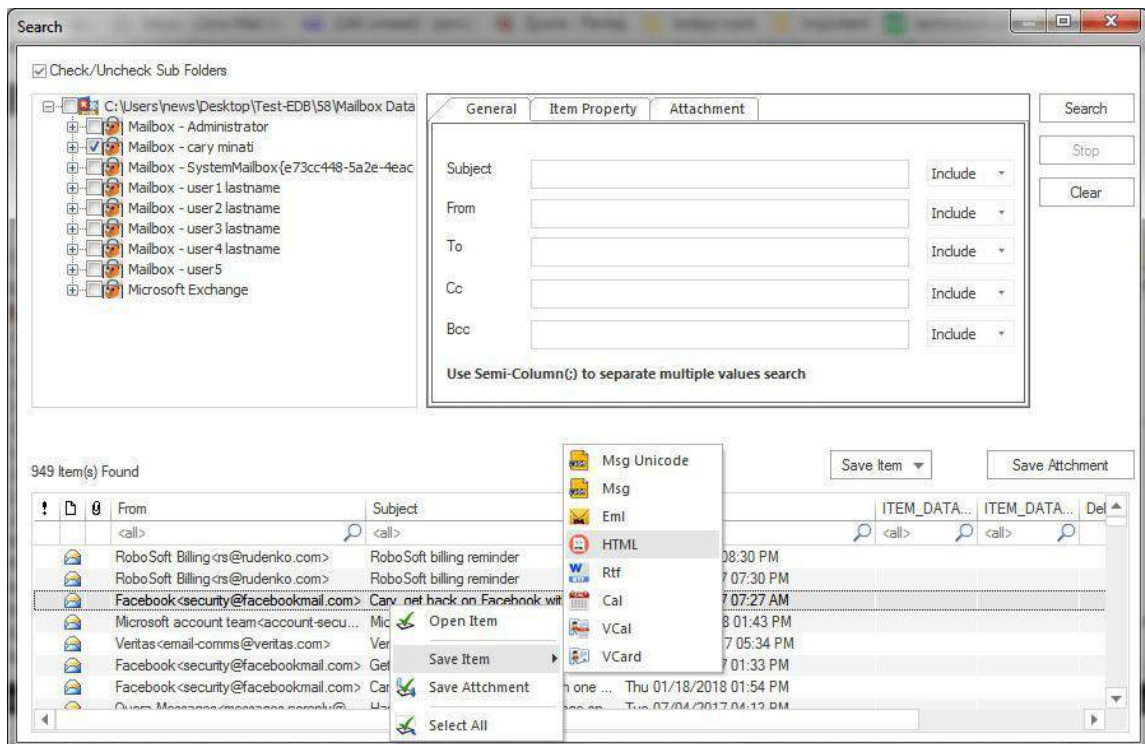

- **Subject : 'Subject'** option allows users to search the individual subject based upon its subject name. The process can be continued by selecting the exclude option from the drop down

Shoviv Exchange Server Suite

arrow. The software will exclude the items based upon their criteria after the exclude option is click.

- **From** : '**From**' option allows users to search based upon the name of sender from which the mail has been received. The software will exclude the items based upon the selected criteria after the exclude option is click. This process helps users to search for the particular messages which sent by the specified sender.
- **Cc** : '**Cc**' option allow users to search based upon the specific name for the message recipient. It helps to search for the particular messages received by the specified recipients. The software will exclude the items based upon their criteria after the exclude option is click.
- **To** : '**To**' option allow users to search based upon the specific name for the message recipient. It helps to search for the particular messages received by the specified recipients. The software will exclude the items based upon their criteria after the exclude option is click.
- **Bcc** : '**Bcc**' option allow users to search based upon the specific name for the message recipient. It helps to search for the particular messages received by the specified recipients. The software will exclude the items based upon their criteria after the exclude option is click.

2. Item Property : The Item Property allows users to search the items by the following ways :

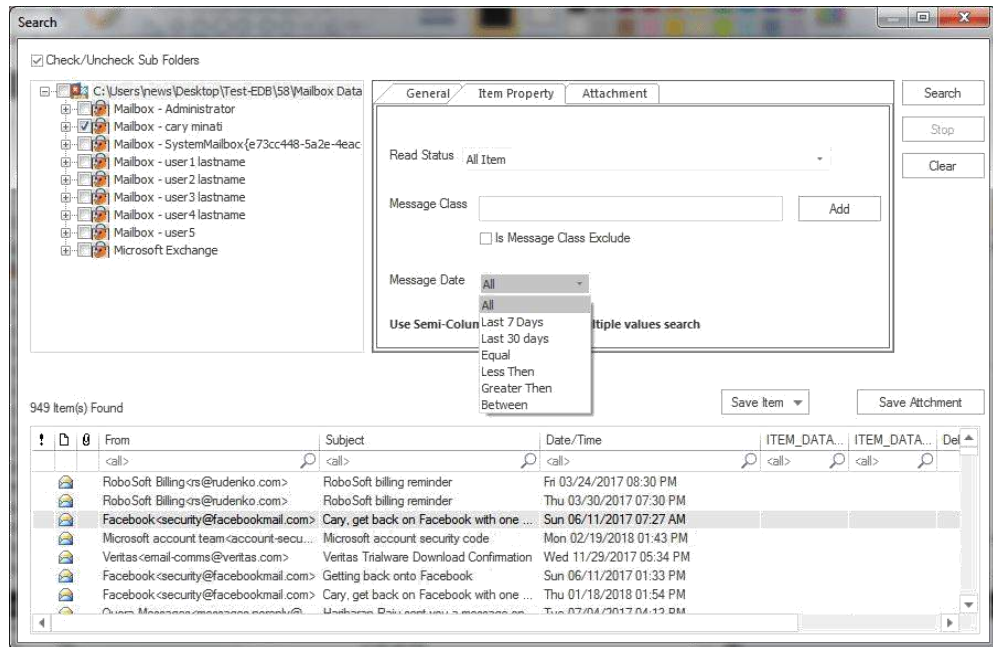

1. **Read Status :** Read status drop down bar allows users to search item according to Read/Unread status of item. It has three options : **read items, unread items, all items.**
2. **Message class :** Message class option is for the users who wish to search items based upon their item types(i.e. Email, Note, Task). The message class filter option allows the users to add the message class using the add button. In this option, user can include or exclude the message classes.

Clicking on the add button, a message class dialog box will pop-up. Message class dialog box will show some default messages inside the dialogue box. To add new message class, user need to type on the message class in the edit box provided to add new message class. Click on add button to add the new message class.

3. **Message Date :** Message date option allows users to search items based upon the message date. The message date option consists different options in the drop down bar according to which user can select the criteria they want.
 - Last 7 days
 - Last 30 days
 - Equal
 - Before
 - After
 - Between

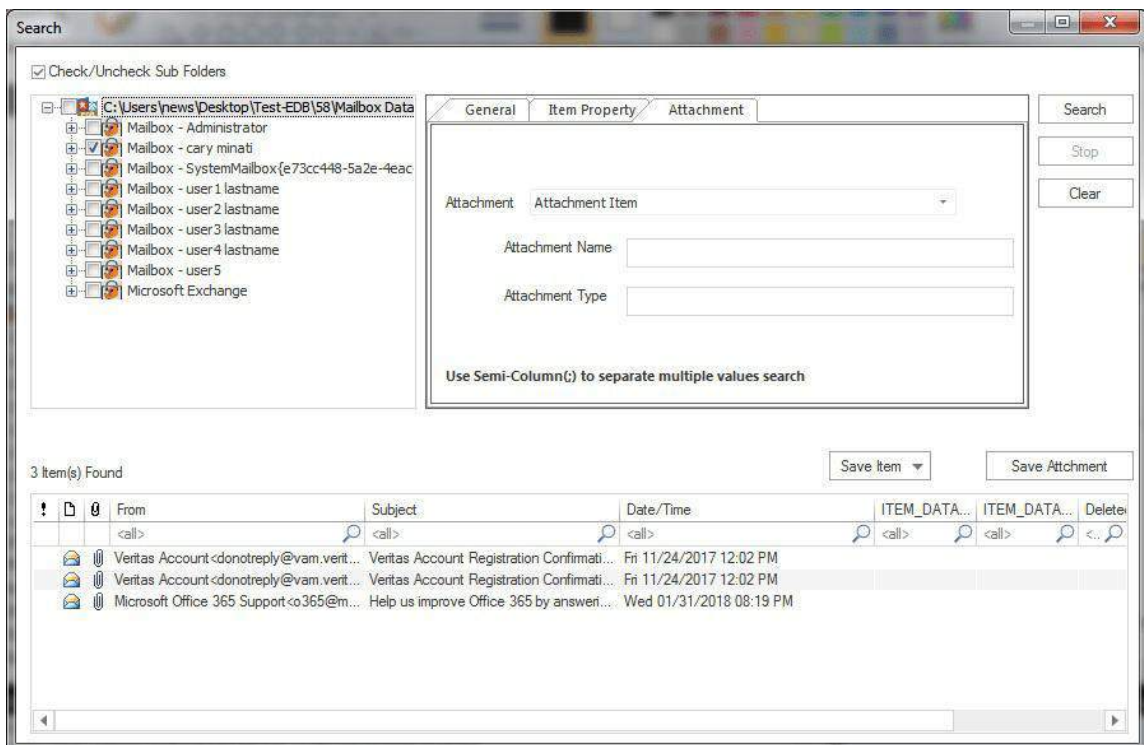

Shoviv Exchange Server Suite

3. Attachment: Find items using their attachment properties.

- **Attachment Name:** Search items by the name of their attachment
- **Attachment Type:** Search items by the type of their attachment

4. Another option which is given in the search option is the **Save Items** in drop down bar. In save item drop down bar, users can save the items in different formats such as EML, MGS, VCARD, CAL, RTF, HTML and MSG Unicode.
