

# New treatment plant using IX-C™ system for Indio Water Authority, Indio, California

**INDUSTRY**

Water utilities industry

**LOCATION**

California USA

**PROJECT**

Installation of treatment plant to comply with California's new MCL for chromium-6

At the end of 2015, Indio Water Authority in California's central valley opened its new treatment plant for chromium-6. Earlier in the year, they determined that ion exchange was the right technology for the job following a pilot program with Ionex SG. Featuring an IX-C™ system, the new plant opened on time and within budget, making Indio one of the first water authorities in the state to achieve compliance with California's new MCL for chromium-6.

The images below show the installation.
