Gazprom Amur Gas Processing Plant Project, 2018 – 2022
It's quite a challenge: 176,000 tonnes of heavy project cargo have to be transported over a 2824-km-long river, which is only 1.10 m deep in some places. Combi Lift will master this feat: The cargo will be loaded onto its heavy lift vessels in ports in Europe and Korea and will be transferred to barges in De-Kastri. Special shallow draft tugs will tow the barges to Svobodny. The Linde Group and Gazprom are going to use the components to build Amur GPP – one of the world's largest natural gas processing plants.
