

CDM (Construction, Design & Management)

Introduction

One of the main impacts of the CDM Regulations has been to oblige designers to consider the health and safety implications of their designs, during construction, maintenance and ultimate demolition. The 2015 CDM Regulations appear to have done nothing to reduce the responsibilities of the Designer and in fact add duties to the requirements.

Who Should Attend

Persons who prepare designs for construction work including variations - this includes preparing drawings, design details, specifications, bills of quantities and the specification of articles and substances, as well as all the related analysis, calculations, and preparatory work; or arranging for their employees or other people under their control to prepare designs relating to a structure or part of a structure.
