Press Release

10th October, 2014

New AFT Heavy duty Hydraulic Wheel Trencher accesses difficult areas with ease

The HW60 is a new hydraulic wheel trencher developed by AFT Trenchers Ltd based in Sudbury, Suffolk, UK who manufactures a wide variety of trenchers for civil engineering and cabling contractors.

This compact trencher is designed to be mounted onto skid steer loaders with a "high flow" option. The combination of heavy duty trencher and loader is the ideal solution for fast and tidy trenching in difficult conditions where access is limited. It will cut the narrowest of trenches even when trenching in concrete and compact aggregate,

The advantages are reflected in increased operational productivity and reduced costs of back fill materials and labour. Demand for this type of equipment is particularly high for engineering and construction projects in populated areas.

AFT Trenchers Ltd recently announced a significant partnership with a major telecommunications company in India. Their trenchers are now all across India working in extreme conditions which include 45° temperatures and heavy monsoon rainfalls.

For a number of years now, AFT Trenchers Ltd has optimised the MH100 to be a powerful hydraulic chain trencher mounted onto the arm of an excavator using an adjustable 360° turntable.

By placing the excavator in an offset position, this highly versatile trencher can be used in canals, down embankments, in roads and road verges and over traffic safety barriers.

Recent major contracts in newly emerging countries like Turkmenistan and Algeria have focused on the versatility of the MH100 and AFT Trenchers is proud of its success in this field of expertise.

To meet the needs of civil engineering tasks using a tractor, AFT Trenchers Ltd has designed a new reinforced chassis for the AFT100 PTO driven chain trencher. With their special heavy duty chain and bullet teeth this rugged trencher can dig in very difficult ground conditions, such as through 200mm of concrete.

This has led to several contracts in newly opened markets such as Poland and Hungary.

AFT Trenchers will be looking to further develop these markets in the future.
