& SERVICES TO THE UPSTREAM E&P INDUSTRY.**

OUR OFFERINGS

WHO WE ARE

Palantir Solutions is committed to the continual innovation of all aspects of oil and gas planning and investment decision making. We have extensive experience working with upstream oil and gas companies supporting their business planning processes. It is our fundamental belief that it is critical to offer alternatives to the way E&P companies have traditionally done planning, and we seek to create new processes and techniques to make it more connected, proactive, accurate and timely. Our main objective is to help companies effectively allocate capital, to better finance the growth of their reserves in order to increase earnings.

WHO WE WORK WITH

We work with E&P companies who have pushed the limits of Excel and PowerPoint who need to get to the next level of maturity in their planning processes. Our clients have complex, sophisticated planning needs, with assets around the globe with different reporting requirements that need to be aggregated into a cohesive series of scenarios and corporate plans. We work with companies who want planning processes that are reliable, and responsive, in order to respond to changes in the commercial environment as they are happening.

WHAT WE BUILD

Our software is built by industry experts who understand that E&P companies should spend their time on analysis, and finding opportunities, instead of collecting and validating data. Our software is designed to solve problems around business planning and address key workflows from preparing and checking planning data, to being able to run and analyse a very large number of scenarios on both a cash flow and financial basis. Our mission is to bring new products to the market and deliver them using new technologies to keep us at the forefront of our capabilities. In our opinion, there is always a better way to achieve results and this is seen through our commitment to constantly improve our applications through new features, enhanced performance and improving code 'under-the-hood'.
