High-quality objects - Fully configurable and available on Autodesk Seek

Thomas & Betts has always been an industry leader for electrical design and components. In continuing its tradition of innovation and expanding its offerings, Thomas & Betts has just released a line of high-quality BIM ladder cable trays for Autodesk Revit. Both steel and aluminum cable tray system options are available. In addition to standard straight sections, there is an assortment of fittings that integrate easily and seamlessly. An entire cable tray layout may be easily changed for specific applications: heights and construction will update with selections, and will reflect automatically on the material schedule.
