"Project Health Control on your project puts eyes and ears everywhere"

Imagine how your business could be if each and every employee treats it as their own. The entire workforce working for the project's early completion and for your bottom ine success.

PROJECT HEALTH CONTROL

An Overlay For Project Success

ORDER EFFICIENCY LTD

WHY PROJECT CONTROL?

When we're talking about project success or failure, we're really talking Project Control, and so the reason is purely economic.
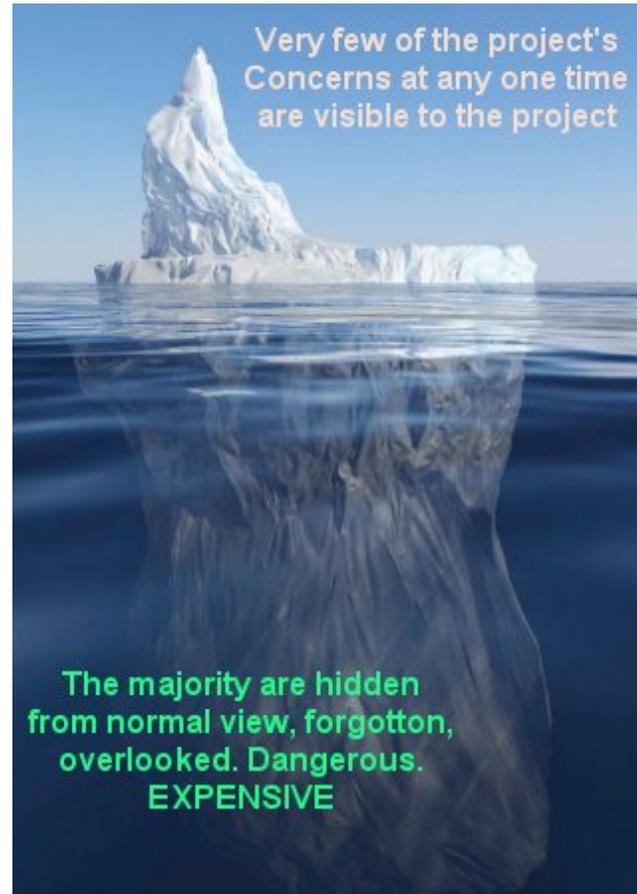

This becomes intuitively obvious when we consider some of the things that hinder a project's progress.

- **Information scatters** - right hand loses sight of what the left hand in the project is doing.
- **People leave**, taking their own personal bubble of knowledge with them.
- **Concerns discussed to death** not resolution. Priority for meeting time by popularity instead of value.
- **Email culture** takes hold alongside 'blame culture' - back covering for people not project.
- **Personal beats project economics** -because a never-ending project = continual stream of wages.
- **Enthusiasm is not automatic** - levels vary hugely in a workforce over the span of a project.

There is widespread deficiency in the way projects are run. Don't believe what the average Project Team representative will tell you about his project, that it's on track, on budget, that the people on the project are fully behind the project mission, and that morale is at an all time high.

If you revisit these people at six monthly intervals, you will hear them all make the same speech but about a project that is often substantially different at each six month stage to the what it was before.

THE ICEBERG IN ...

Very few of the project's Concerns at any one time are visible to the project

The majority are hidden from normal view, forgotton, overlooked. Dangerous. EXPENSIVE

... YOUR PROJECT

Use PHC to find and expose the Iceberg in your project. Bring us into your project team. It's very easy. First work setting up systems is remote, then site based. Staff get 'on-the-job' training throughout the project as we facilitate Management and Technical meetings.

Reach out to us now for information on how easy it is to get started with a low risk trial

WHY PROJECT HEALTH CONTROL?

Project Health is all about visibility and communication.

A healthy project in our definition is one where the deliverables are clearly defined and their status known precisely on a day to day basis.

The processes used in our project health control system serve to feed that definition continually. And those processes are followed mainly by staff dedicated to the Project Health Control function.

There are some processes for the whole project staff to follow, but these relate to accessing the PHC lists and feeding information about the changing status of deliverables and on problems that arise while doing the work.

- **Staff see PHC** as something both useful to their daily work and easy to feed with update information. The data gathering, organising and analysis work that is done by the PHC consultant is specialised and is done by a combination of site based personnel and remote admin staff.
- **Management see PHC** as a window into the workings of the project. The dashboard views alone offer a valuable insight on project progress, but with the feedback mechanism in place and working, for a PHC enabled project it's like 'having eyes and ears everywhere' on your project. An immensely useful tool for project control and risk and issues management.
