

Booster Sets

If you have a building of more than two storeys or have a reduced / fluctuating mains water pressure you may need a booster set. If you have a private water supply (borehole) that discharges water into a reservoir or header tank for onward transport you may need a booster set.

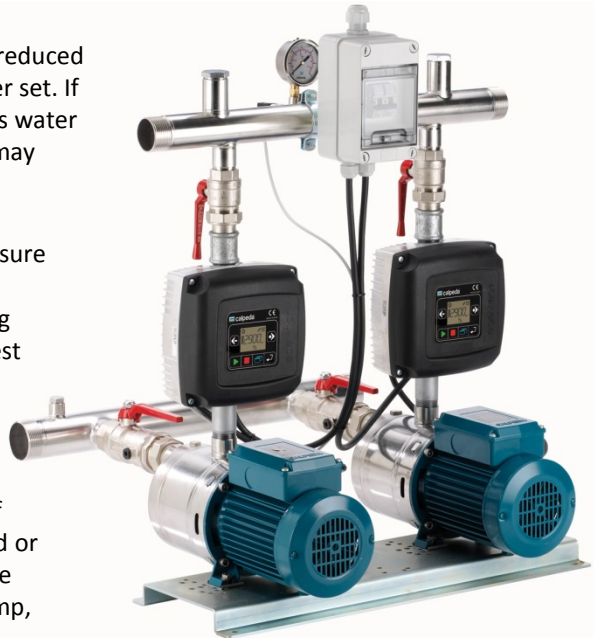

Single pump booster set with vertical multistage and inverter drive

Carter Pumps has many years experience installing water pressure booster sets for potable water supply. With access to all leading pump manufacturers you can rest assured that the best possible solution for your particular application will be offered.

There are a bewildering array of booster set configurations. Fixed or variable speed, single or multiple pump, vertical or horizontal pump, the list goes on.

Let us help you determine what configuration best suits your needs. Call us now on 01380 734900.

Twin pump booster set with horizontal multistage pumps and inverter drives

Reduce Costs!

Variable speed drive booster sets use energy efficient inverter technology to adjust the speed of the pumps so that only the exact amount of energy needed to pressurise the connected system is used. Additionally this variable speed function results in a constant pressure water supply. Benefits include reduced energy bills and lower running costs due to less wear and tear on components.

Bespoke configurations including break tank.

Carter Pumps can also help with . . .

Installation and commissioning.

Ground works. Undertaking all types of ground works including trenching of pipes and cables.

Electrical works. We are an NICEIC approved electrical contractor.

Water treatment. Including nitrate removal, softening, particulate filtration, UV sterilisation and sodium hypochlorite dosing.

Reservoirs.

Break tanks

Pressure vessels, pressure switches, transducers, non-return valves, lever valves, gauges

High flow equilibrium ball valves
