

Engage Process Suite

Simplifying Process Improvement and Empowering your Workforce

- Intuitive User Interface**
A unique single screen interface, allows you to quickly capture and display entire scenarios graphically, using simple drag and drop actions. This enables workshop participants to easily follow what is discussed and agreed.
- Syntax Engine**
This guarantees that the process is always correct, ensuring there are no infinite loops, open ends or floating processes.
- Evaluation and Simulation**
A powerful analysis engine built into the single user interface allows you to introduce varying scenarios without having to switch to worksheets. This enables you to immediately see the impact of team suggestions.

Engage Process Suite offers a complete process management platform encompassing Engage Process Modeler and Engage Process Viewer, as well as six supporting modules. Utilising this powerful yet easy to use solution, process teams can quickly and simply create multiple business scenarios defining the 'as is' versus various 'to be' processes for analysis, discussion and documentation.

A cloud-based solution, the Suite is designed to empower key personnel within the business. It is not a 'formal' business process tool, but a dynamic graphical solution.

Engage Process Modeler

The Engage Process Modeler offers over 100 distinct differences from traditional process tools, adding tangible value to business process methodology by allowing process teams to interactively map and evaluate processes at a granular level, and make improvements, all in one single session.

Using the Modeler within workshops enables process teams to quickly capture and display entire scenarios graphically, including responsibility by job role with estimated timings. The unique single screen interface allows teams to work on the process model without the need to move through frames, pages or post-it notes.

By accessing all this functionality within one platform, process experts can work more efficiently, facilitating effective and productive business process workshops.

Communication links with other software including Microsoft Word, Excel, PowerPoint and Visio enable you to share models with other personnel quickly and easily.

Engage Process Suite

Engage Process Viewer

The Engage Process Viewer provides anyone in your organisation immediate access to the recorded processes. Processes mapped in the Modeler can be shared to the Viewer instantly, allowing users to view them in a browser or via the Viewer App for Windows, iOS and Android tablets.

The Viewer can display all details included in a process and has an integrated Feedback module to support continuous improvement. It also enables organisations to export processes into a Digital Process Handbook, a key requirement for ISO certification.

Other Modules

The Suite offers six additional modules that support centralised process management:

- **Tables** - a central repository for defining and managing entities such as documents, roles, IT systems
- **Brainstorm** - App for digital brainstorming during workshops with larger groups
- **Authorisation and User Manager** - central management of users and their rights
- **Publisher** - facilitates process publication routes, including custom landing pages, intranet integration and version history
- **Feedback** - online continuous improvement module facilitating interaction between process owners and users
- **Upload** - integrated document vault to upload documents, pictures and forms

All modules are available in the Suite Gold and Platinum. Version choice is dependent on the number of User and Viewer Licences required.

Benefits of the Engage Process Suite

- Built for process mapping in “real time”, i.e. workshops
- Drag and drop functionality maps processes using intuitive graphical icons
- ‘As is’ and ‘to be’ comparison in one screen
- Automatic process structure updates with simple drag and drop functionality
- Include relevant facts and data to enrich each process step
- Instantly switch between multiple layouts
- Easily evaluate processes by lead time, cost and more, to quickly identify bottlenecks
- View statistics and create reports tailored to your audience
- Intuitive interface resembling Microsoft Office
- Export processes to PowerPoint, Word, Excel, Visio, PDF and others
- Instant publish function to create a read-only internet environment that includes a discussion platform

About Larmer Brown

Larmer Brown has been supporting learning initiatives for more than three decades. The Larmer Brown Platform is our powerful subscription-based learning solution. Encompassing a range of complimentary products and services, this learning platform offers tools to manage all aspects of a learning project, allowing you to choose the solution that meets your requirements.

Larmer Brown is an approved Reseller and Services Partner for Engage Process.
