

## Description

Soundis Acoustic Flanking Rolls are typically used in conjunction with Acoustic Batten 50 & 70 and Acoustic cradle and batten systems to acoustically isolate the floating floor from making contact with the walls, skirting boards and any other protrusions through the acoustic floor system.

Soundis Acoustic Flanking Rolls are manufactured in white, the same colour as the majority of skirting boards and door frames. A simple solution to offer clients extra savings as they don't have to go back and carry out costly mastic seal's to hide them, as you would have to do with other brightly coloured acoustic edge strips on the market.

## Technical Properties

Material	Extruded closed cell polyethylene foam
Working Temperature	-40 / +60 degrees C
Water Absorption	0.02 - 0.03 mg/cm2
Colour	White

## Key Benefits

100% Recyclable

Zero VOCs - Zero CFCs -  
Zero ODPs - GWP <5

## Roll Size Options
