

Vertical Storage Tanks

Thermoplastic/GRP/Dual Laminate

Tanks and Storage Vessels

SILOTANK manufactures vertical GRP, thermoplastic and dual laminate tanks for the safe storage of liquids.

Straight Thermoplastic tanks are available up to 50,000ltrs with GRP and Dual Laminate up to 200,000ltr. Dual laminate and GRP tanks are available from 500ltr with a full range of chemically resistant liners available.

Manufacturing

Thermoplastic tanks are manufactured using the latest butt welding technology and are fully compliant with standards such as BS EN12573, DVS205 etc depending on the customers specification.

GRP tanks are manufactured using handlay and helical filament winding techniques. Utilising BS 4994, GRP tanks are designed and manufactured under ISO9001:2008 quality management scheme.

Dual laminate tanks are manufactured using butt welding for the chemical layer along with either hand lay or filament winding of GRP for structural strength.

All tanks are available in flat, sloping and conical bases and can be supplied with GRP skirts or steel legs.

Composition and manufacture

Tanks are manufactured in accordance with BS 4994:1987, ASTM 03299, RTP 1, API 12P, DVS 2205:1987 and BS EN12573:2000 using systems that ensure ISO 9001:2008 approval is adhered to.

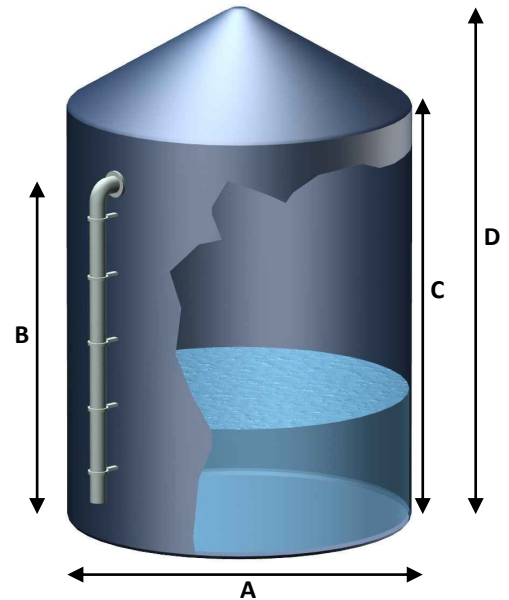

Maintenance

Silotank manufacture all tanks keeping in mind the end user and operational life of the tank. All tanks need to be inspected at regular intervals as per Silotank maintenance and installation manuals. Further guidance can be sought from other documents including the PM75 and PM86 documents issued by the UK Health and Safety executive and the IPC Guidance notes for Storage and Transfer of Materials by the Irish EPA. These will give guidance on regular maintenance and also guidance on key points when selecting the correct tanks for chemical storage and standards to be adhered to.

Capacity	Diameter	Height of	Height to	Shell Height	Total Height	Base Type
(Litres)	(A)mm	Outlet	Overflow	(C) mm	(D) mm	
		mm	(B) mm

All measurements are based on tanks having 20 deg conical roof.
Other tank volumes and sizes are available. List is shown as guidance only.

Options:

Inlet pipe work
Outlet Valves.
Content measurement: Cat & Mouse and Normand Gauge.
High and Low level probes and Ultrasonic level gauge.

Heating and insulation.
Flanged vent.
Ladder and platform.
Dosing pump kiosk.
Inlet kiosk.
Mixers.

Other Products in our range include

Tanks from 200L to 200,000L, Minitank Systems, DWI Tanks, Salt Saturators, Scrubbers, Conical Settlement tanks, Degassers, Process Vessels, GRP Grating & Covers. For further and more comprehensive information contact Silotank or email us at: sales@silotank.com
