POS Manager supplements ERP data with anything "missing" from ERP system that is required by the POS to trade, such as:

- Promotions
- Till Users and Permissions
- Hot Keys
- Till Setup

Data Extracted from ERP / Accounting System to Elite Database:

- Sales Ledger Accounts (customers)
- Customer Trading Terms (limits, profile, special pricing)
- Product Details (code, description, barcode etc)
- Product Pricing (standard, special price, qty break etc)
- Product availability (stock levels across all locations)

Elite "Trading Foundation" SQL Database

Data made available to EPoS

EPoS completes a transaction

Elite "Transactions" SQL Database

EPoS Transactions are posted from Elite Database to ERP / Accounting System as:

- Sales Orders/Invoices
- Credit Notes
- Stock In/Out
- Bank/Cash Book Debits/Credits

Fully detailed postings in near real-time, or summarised/batched as required (i.e daily/weekly)

Elite POS used for:

- General Retail
- Visitor Attractions
- Clubs
- Trade Counters
- Food & Beverage

- Mobile Sales (queue busting / van sales)
- Events and Shows
- Telephone Order
- Mail Order

- Anywhere fast order entry is needed!
