

- Extended lifetime
- Reduced downtime
- Lower fuel consumption
- Higher throughput
- Better value for money

Save time and money

The less time you spend replacing wear parts on your SPFH, the more hours you can work and the more profitable your machine becomes. That's why it pays to use Dura Line long life crop flow components in your 6000 or 7000 Series John Deere. Thanks to their special high-tech coating, Dura Line parts could eliminate in-season downtime for good.

Unrivalled technology

What makes Dura Line so special? It's the unique high wear resistance made by a chrome carbide or tungsten carbide coating. The chrome carbide layer technology is a highly complex hydrogen defined atmosphere process produced with a special patented powder that involves fusing the coating to the metal 'carrier' at an incredible 1250 °C. No wonder only two furnaces in Europe have the technology to produce Dura Line chrome carbide layer parts!

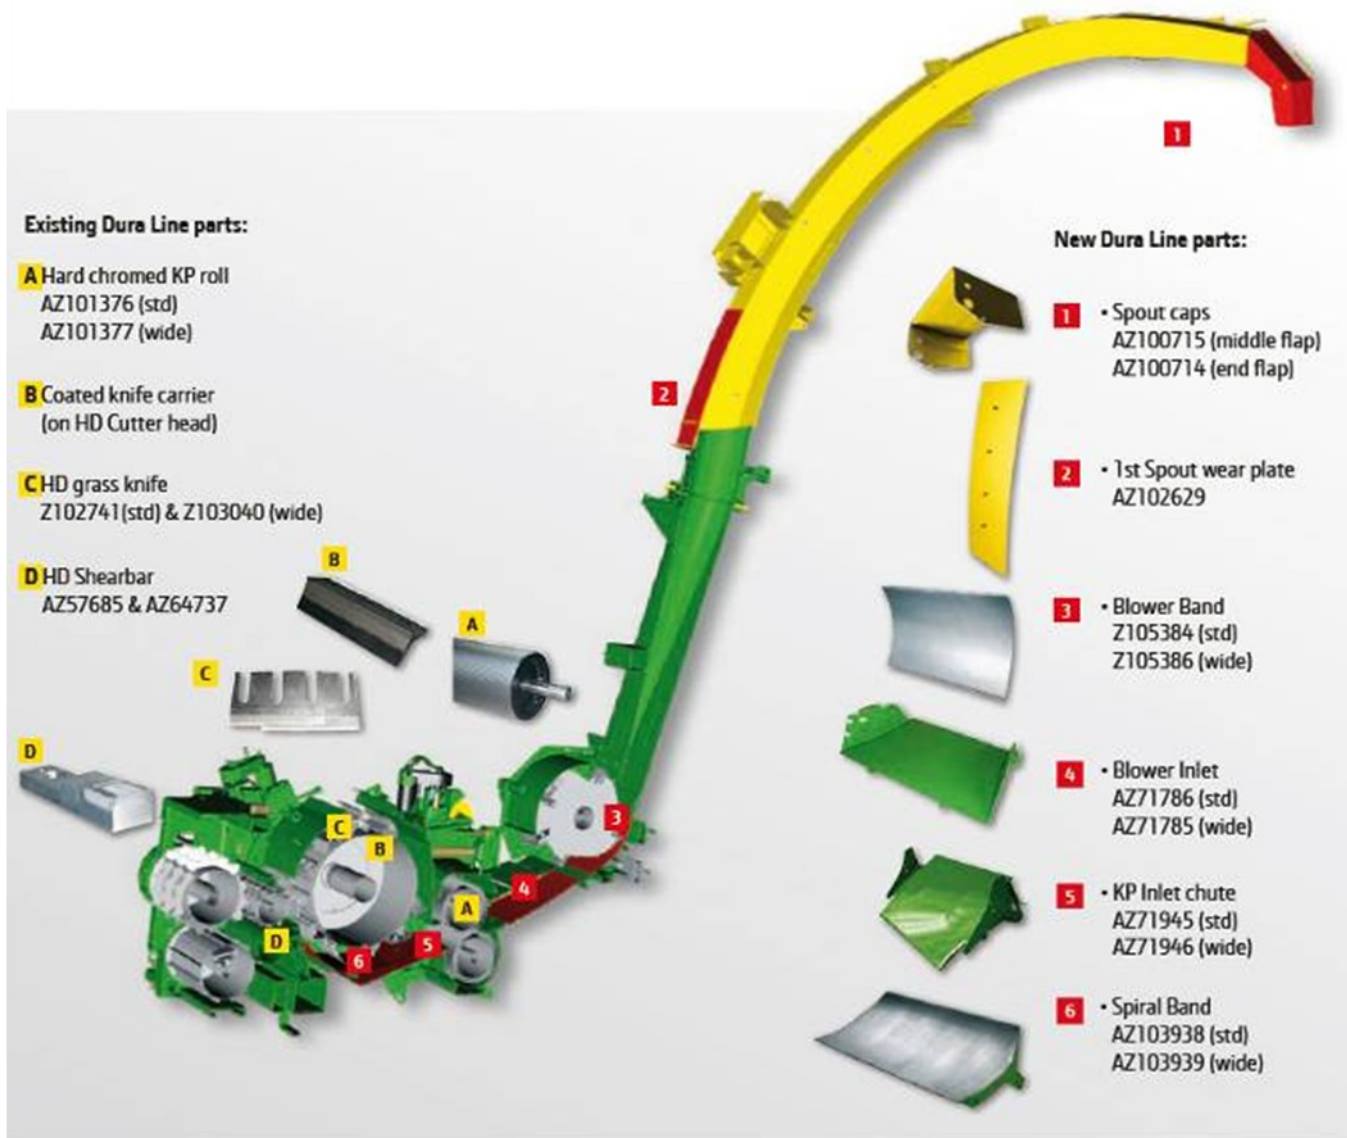

Unrivalled performance

Thanks to their incredibly hard coating, Dura Line wear parts are tougher than anything our field testers have ever seen. This incredible hardness shows a very high self cleaning effect – this helps to improve crop flow leading to a reduction in power requirement. That means you use less fuel!

Unrivalled value for money

With Dura Line components, you save a lot more than you spend. Yes, they cost more than conventional premium John Deere parts – but they last up to three times longer and you save cost of installing replacement parts so frequently. Dura Line parts help to reduce the downtime risk in season significantly saving you a lot in the long run.

John Deere manufacturing heritage has led to the development of Dura Line – an innovative revolutionary technology that delivers a solution to the problem of in-season wear and provides additional exceptional value for all John Deere SPFH owners.

*std = Standard body / wide = Wide body

So next time you order replacement wear parts for your SPFH, put an end to in-season downtime for good. Insist on the performance and durability of genuine Dura Line parts.

Choose only Genuine John Deere replacement parts
