## 2 Description of the Supply Base

### 2.1 General description

Enviva, Holdings LP (Enviva) operates 3 mills in its Wilmington region: Enviva Pellets Greenwood, LLC located in Greenwood, SC, Enviva Pellets Sampson located in Faison, NC and Enviva Pellets Hamlet located in Hamlet, NC.

#### Forest cover-types and growth/drain ratios

Enviva’s Hamlet mill sources feedstock from portions of North Carolina, South Carolina and Virginia. Hardwoods are the pre-dominant species group making up 59% of the forested hectares. The most recently available inventory data from the US Forest Service’s Forest Inventory and Analysis program show that the growth to drain ratio for hardwood in the Hamlet supply base area is 2.29:1, meaning that net hardwood inventories are increasing and current harvest levels for this product are sustainable. The growth to drain ratio for pine in the region is 1.56:1 (US Department of Agriculture Forest Service, 2017). Enviva’s sourcing does not compete with other forest product industries: instead, it provides a market for low value forest products produced during harvests for high-value timber.

The growth: drain value > 1 means that the region’s forest standing stock has increased steadily since 2000 at an average annual rate of about 1% (see Figure 1) (US Department of Agriculture Forest Service, 2017).

Figure 1. Standing Inventory in the Hamlet Supply Base Area

Based on the most recently available inventory data from the US Forest Service’s Forest Inventory and Analysis program, the combined hardwood and pine growth: drain ratio is 1.76:1.

The forest in the supply base consists primarily of southern yellow pine and mixed oak cover types. Forest species composition for each state within the supply base is described in Table 1 (USDA Forest Service, 2019).

Table 1. Forested hectares, forest cover type by state in the Hamlet Supply Base Area

Forest Cover Types	North Carolina	South Carolina	Virginia	Total
White / red / jack pine group	17,553	-	12,084	29,637
Spruce / fir group	2,497	-	-	2,497
Longleaf / slash pine group	163,969	181,620	-	345,589
Loblolly / shortleaf pine group	1,799,301	1,581,828	198,824	3,579,953
Other eastern softwoods group	7,942	9,556	2,306	19,805
Oak / pine group	708,828	432,102	113,293	1,254,223
Oak / hickory group	1,668,466	736,202	409,446	2,814,114
Oak / gum / cypress group	472,747	604,886	4,723	1,082,356
Elm / ash / cottonwood group	184,488	128,206	24,661	337,355
Maple / beech / birch group	624	-	2,454	3,078
Other hardwoods group	9,177	629	4,388	14,194
Exotic hardwoods group	7,084	6,355	583	14,022
Nonstocked	49,473	45,585	8,968	104,026
<b>Total</b>	<b>5,092,151</b>	<b>3,726,969</b>	<b>781,730</b>	<b>9,600,850</b>

### Operating Scale

Enviva is just one of several industries and entities sourcing wood in its supply base area. According to Forest2Market’s database, Enviva’s Hamlet mill is projected to source about 7% of the total wood harvested in the area, while regional annual inventory growth exceeded the volume harvested (Forest2Market, 2019). Enviva estimates 28% of the Hamlet mill’s pellet feedstock will be hardwood, while 72% of wood used is pine.

### CITES, IUCN Species

The International Union for the Conservation of Nature (IUCN) Red List of Threatened Species includes *Pinus palustris* (Longleaf pine) which does occur in the supply base region (The IUCN Red List of Threatened Species, 2015). Longleaf pine is included in the IUCN list because its current extent is much reduced from its historical dominance in the southeast US. However, conservation groups, such as the Longleaf Alliance, agree that creating commercial viability of longleaf pine is crucial to its restoration. Enviva’s use of material from longleaf stand thinnings or other harvest residuals supports its commercial viability and encourages landowners to restore longleaf stands. Enviva will not procure wood from natural longleaf stands if they are going to be converted to non-forest or another forest type.

Further, Enviva maintains a third party audited Controlled Wood Risk Assessment which satisfies the Forest Stewardship Council™ (FSC), Programme for the Endorsement of Forest Certification™ (PEFC) and Sustainable Forestry Initiative® (SFI®) Chain of Custody requirements. These certifications address the controls needed to avoid the use of CITES and/ or IUCN species concerns. None of the species used for wood pellets appear in the Convention on International Trade in Endangered Species (CITES) Appendices (CITES, 2015).

### General Forest Management Techniques

#### *Forest management in hardwood systems*

Hardwood forests are managed either as even-aged or uneven-aged stands. Most hardwood stands are 40 to 50 years when harvested if managed as an even-aged stand. No site preparation or fertilizers are used on hardwood forests. Typically, hardwood management relies on natural regeneration of stands where forest tracts are harvested and the natural processes of seedling establishment and sprout growth from the remaining stumps (called “coppice”) produce the next forest.

#### *Forest management in pine systems*

Pine forests are typically managed on an even-aged basis with a rotation age of 25 to 30 years. During this rotation the pine stand may be thinned one or two times during the middle of the rotation with a final harvest completing the rotation. Most pine forests are artificially regenerated with pine seedlings planted by hand to defined stand densities. Some pine stands may be released after 5 years and are not intensively managed thereafter, which permits the growth of hardwood tree species within the stand, creating a mixed pine and hardwood forest.

Forestry practices in the region can vary greatly due to landowner demographics and forest types. There are financial and tax incentives available to forest landowners to encourage management, replanting, and riparian zone buffer incentives (Georgia Forestry Commission, 2019), (North Carolina Forest Service, 2019), (South Carolina Forestry Commissions, 2018).

### Ownership, Land Use and Certification

Forest ownership patterns within the supply base are typical for the southern US, with the highest percentage of the forest owned by private landowners. Forest land ownership categories for each state in the supply base are presented in Table 2 (USDA Forest Service, 2014). The majority land use in the supply base area is generally agriculture or forestry. Land use data for the supply base area is presented in Table 3 (USDA Economic Research Service, 2017). Major forest certification schemes such as the American Tree Farm System® (ATFS), Sustainable Forestry Initiative® (SFI®) and Forest Stewardship Council™ (FSC) have program participants within the supply base. The states within the supply base have approximately 2 million certified acres in one of the 3 major certification schemes; SFI® Forest Management has 1.1 certified hectares, ATFS holds 0.7 million certified hectares, and 0.3million hectares are FSC certified.

Table 2. Forested Hectares, Ownership by State in the Hamlet Supply Base Area

	Federal	State	Local	Private	Total
North Carolina	230,453	245,361	86,140	4,530,198	5,092,152
South Carolina	258,159	132,974	48,581	3,287,253	3,726,968
Virginia	37,666	6,878	9,090	728,098	781,731
<b>Total</b>	<b>526,278</b>	<b>385,213</b>	<b>143,811</b>	<b>8,545,549</b>	<b>9,600,851</b>

Table 3. Land Use by State (State-wide Basis)

State	Cropland	Pasture	Forest	Urban areas	Other
North Carolina	14%	5%	58%	10%	13%
South Carolina	10%	5%	68%	8%	9%
Virginia	12%	11%	61%	7%	9%

### Regional Socio-economic Conditions

Regional employment is graphed below and provides a snapshot of the social mixture of the supply base. Mining and Timber Harvesting make up 0.2% of the total employment in the region. However, due to the nature of pellet production, it also supports other sectors such as trade, transportation and material moving, production, installation, maintenance and repair, business and financial operations and office and administrative occupations which in total make up an additional 40% of the labour force. The mean annual income for the region is \$51,174 and mean annual income for the employment sector including Forestry is \$29,990 (Bureau of Labor Statistics, 2016). Mean annual income for an average mill worker in the region is \$34,255 (Bureau of Labor Statistics, 2016). Enviva employs directly approximately 79 people in the region. Further, Enviva’s operations will an additional market to 22+/- harvesting crews and saw mills, along with additional work for forest managers, and feedstock and pellet transport companies. Local contractors are used in maintaining the mills, providing hundreds of spin-off jobs. Figure 3 illustrates employments by the major industrial groups for the two states included in the supply region (Bureau of Labor Statistics, 2016).

Figure 2. North Carolina, South Carolina and Virginia Employment by Major Sector

According to a report created for Enviva by Chmura Economics & Analytics, the estimated total annual economic impact (direct, indirect, and induced impacts) of constructing the Hamlet wood pellet manufacturing plant is estimated to be \$133.1 million while supporting an estimated 635 jobs. An additional indirect impact of \$24.9 million and 145 jobs will benefit North Carolina businesses that support the plant’s operation, including local logging and trucking companies (Chmura Economics & Analytics , 2013).

### **Pellet Feedstock Profile**

Primary feedstock is sourced direct from the forest in the form of round wood or chips from +/- 10 suppliers, all of whom are vetted and qualified prior to delivering. All suppliers must sign a contract with Enviva before wood can be delivered to an Enviva mill. The contract requires suppliers to use trained loggers during harvest, follow best management practices for water quality, and to avoid controversial sources of wood, such as illegal logging. Enviva foresters confirm trained logger status and ensure that loggers delivering wood maintain their continuing education as required. All suppliers and loggers must adhere to posted safety requirements while on Enviva property.

Primary feedstock from forest residues, such as tree tops, limbs, deformed and low-grade trees, and any other wood produced during harvest that is otherwise unacceptable to other wood users in the area is delivered to an Enviva mill as woodchips. A single load of roundwood from the same harvest can contain tops, limbs, and/or small diameter or malformed understory trees that cannot be distinguished from one another through visual inspection. Enviva does not use sawlogs in the production of pellets, nor do we use any construction debris, treated wood, or post-consumer material.

Enviva also sources secondary feedstock from a variety of sawmill and wood industry suppliers. Sawmills source high-quality logs from the forest and mill them into products like two-by-fours. Wood industry suppliers use the products created by sawmills to produce products such as furniture or other assembled wood products. These feedstocks are most commonly in the form of sawdust or shavings and may be green or kiln-dried.

At the Hamlet plant, the estimated pellet feedstocks sourced in 2019 will have the following characteristics:

- Primary Feedstock (roundwood and forest residues direct from the forest) will comprise an estimated 45% of the feedstock, all will be SBP-compliant Primary Feedstock and approximately 7% of the volume is from certified sources.
- Secondary Feedstock (sawmill and wood industry residues) will make up an estimated 55% of the feedstock supplied by 7 mills is SBP-Compliant Secondary Feedstock and approximately 15% will be from certified sources.
- Hardwoods will make up 27% of the feedstock and softwood species will comprise the remaining 73%.

### **Enviva's Commitment to Responsible Wood Sourcing**

#### *Track & Trace*

Enviva has implemented management systems to ensure that the wood used to make wood pellets meets our strict sustainability requirements. Specifically, Enviva maintains a robust tracking and monitoring program to ensure that all our suppliers deliver wood that is sourced according to our expectations. First, Enviva uses our SFI Fiber Sourcing verifiable monitoring program as a basis for monitoring tract harvests. In addition, we maintain a third-party audited Track & Trace database which includes information at the tract level, including data on the forest type, age, GPS coordinates, acreage, and the percent of volume from that tract being sold to Enviva. Before agreeing to accept material from a certain tract, Enviva's foresters must

obtain this tract-level data and enter it into our database, which generates a unique tract ID. Then, upon delivery to the Hamlet mill, each load is linked to that tract's ID number. As a result, Enviva knows the tract-level attributes for all the primary wood entering the mill.

The Track & Trace data collection is supported by tract audits performed by Enviva foresters. During tract audits, Enviva foresters validate data on the tract characteristics in addition to ensuring that best management practices (BMPs) for water quality are properly implemented, special sites are properly protected, and loggers are trained, along with other metrics for responsible harvesting. Enviva only accepts wood from tracts in which the logger has completed and maintains training through a SFI-approved trained logger program.

Enviva monitors all incoming raw material to ensure that feedstock meets Enviva's sustainable sourcing policy. If any of these monitoring programs uncover issues with incoming raw material, Enviva will contact suppliers to notify them of the issue. If needed, Enviva will cease accepting deliveries from a supplier who does not perform to our sustainability standards. Enviva will not accept further deliveries from a poorly performing supplier until the supplier demonstrates the ability to adhere to Enviva's sustainability requirements.

*Identifying and protecting High Conservation Value (HCV) Areas:*

While gathering Track & Trace data on specific tracts prior to purchase, Enviva's foresters must evaluate whether there is a risk that the tract might be considered HCV or have an HCV area present. This assessment is conducted on a site-by-site basis in order to evaluate the condition of the stand and to maximize the likelihood of regeneration of desirable species post-harvest.

Overall, when deciding whether to purchase primary feedstock from a given tract, Enviva's goal is to determine whether that tract will, if harvested, produce a new tract with the same desirable species composition that was present before harvest. Some indicators that are considered in this decision include forest type, location, species composition, hydrology and water flow, stand age and soil saturation. When assessing a tract for HCVs, Enviva evaluates all of these important characteristics. If there is evidence based on this first level of evaluation that the site may contain an HCV area, the Forester must perform a second level review which includes an on-site assessment, data collection and documentation prior to purchase.

At the landscape scale, we endeavour to contribute to a working forest landscape with a diversity of age classes representing various forest type assemblages which can, over the long and short term, provide wildlife habitat, recreation, buffers for climate change, and other ecosystem services, while still playing a pivotal role in conservation and working forests in the supply base area.

*Minimizing risk from Secondary Feedstock*

Enviva purchases sawmill and wood industry residues in the form of sawdust, shavings, or other waste products from the milling process (Figure 4). Secondary feedstock suppliers receive an initial visit prior to beginning deliveries, to verify their operations and products. All sawmill and wood industry suppliers are required to complete a Residual Supplier Reporting Form, providing Enviva with information on the source of their wood as well as any certifications and species used. Enviva includes their supply areas in our supply

base evaluation and provides each supplier with feedback on their supply area, noting any areas of risk that may be present. Enviva may choose to cease deliveries from a supplier which refuses to provide the necessary data for us to properly include their supply area in our risk assessment. Enviva contacts each sawmill and wood industry supplier annually to ensure their data are accurate.

## 2.2 Actions taken to promote certification amongst feedstock supplier

Enviva is third party certified in the three-major chain of custody systems (FSC, PEFC & SFI). Enviva also maintains certification under the SFI Fiber Sourcing Program. SFI Fiber Sourcing requires Enviva to promote responsible forestry activities and certification to our suppliers. Our staff are actively involved in the SFI Implementation Committees which are groups of SFI companies that work together to elevate forestry operations on-the-ground.

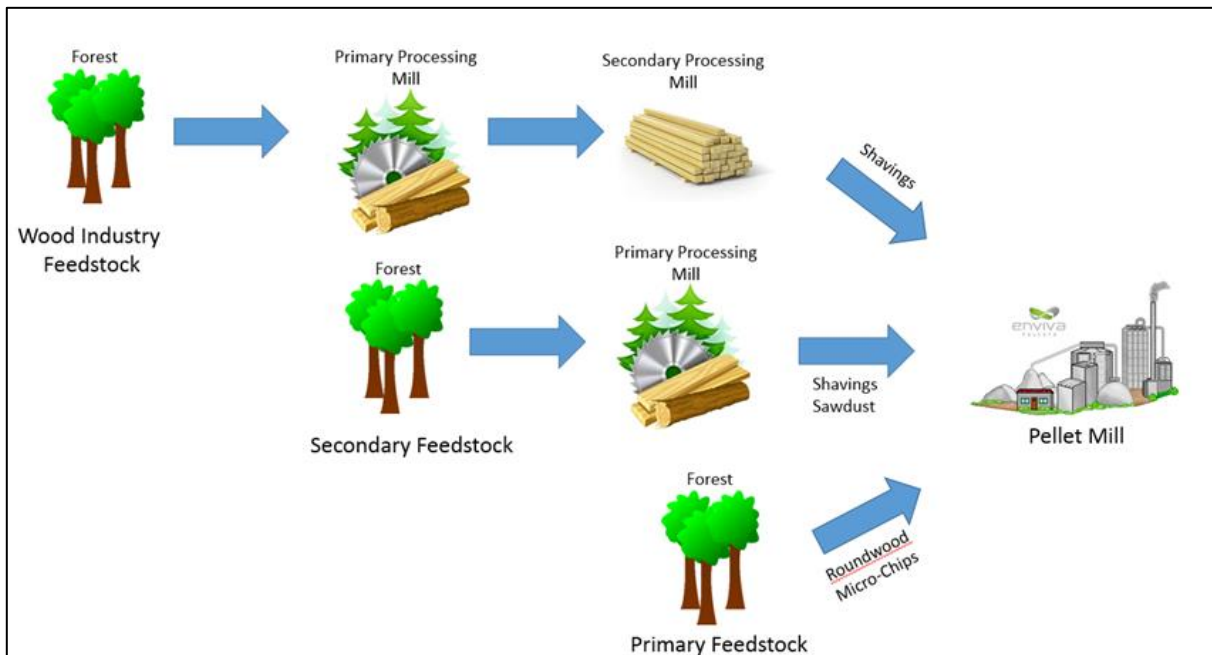

Enviva actively pursues feedstock from certified sources to encourage those landowners to maintain and expand their certified holdings. Enviva also supports and collaborates with the American Tree Farm System and has an Independent Management Group (IMG) under ATFS which was created in 2015. Enviva has staff devoted to working with landowners to recruit them either into our group or the state program, by assisting them with writing management plans and preparing for audits. In 2018 Enviva's ATFS IMG included 435 separate tracts and 68,335 certified acres, and in the Hamlet sourcing area Enviva has already certified 296 acres in its IMG program ahead of the mill startup.

## 2.3 Final harvest sampling programme

Feedstock for Enviva Pellets Hamlet, LLC comes mainly from commercial pine operations. Enviva does not expect any significant volume of wood from forests typically managed in 40-year or longer rotations.

## 2.4 Flow diagram of feedstock inputs showing feedstock type [optional]

Figure 4. Typical Process Flow Chart

## 2.5 Quantification of the Supply Base

### Supply Base

- a. Total Supply Base area (ha): cumulative area of all forest types within SB
- b. Tenure by type (ha): privately owned/public/community concession
- a. & b.

	Federal	State	Local	Private	Total
North Carolina	230,453	245,361	86,140	4,530,198	5,092,152
South Carolina	258,159	132,974	48,581	3,287,253	3,726,968
Virginia	37,666	6,878	9,090	728,098	781,731
<b>Total</b>	<b>526,278</b>	<b>385,213</b>	<b>143,811</b>	<b>8,545,549</b>	<b>9,600,851</b>

- c. Forest by type (ha): All forested acres are Temperate forest

Forest Cover Types	North Carolina	South Carolina	Virginia	Total
White / red / jack pine group	17,553	-	12,084	29,637
Spruce / fir group	2,497	-	-	2,497
Longleaf / slash pine group	163,969	181,620	-	345,589
Loblolly / shortleaf pine group	1,799,301	1,581,828	198,824	3,579,953
Other eastern softwoods group	7,942	9,556	2,306	19,805
Oak / pine group	708,828	432,102	113,293	1,254,223
Oak / hickory group	1,668,466	736,202	409,446	2,814,114
Oak / gum / cypress group	472,747	604,886	4,723	1,082,356
Elm / ash / cottonwood group	184,488	128,206	24,661	337,355
Maple / beech / birch group	624	-	2,454	3,078
Other hardwoods group	9,177	629	4,388	14,194
Exotic hardwoods group	7,084	6,355	583	14,022
Nonstocked	49,473	45,585	8,968	104,026
<b>Total</b>	<b>5,092,151</b>	<b>3,726,969</b>	<b>781,730</b>	<b>9,600,850</b>

- d. Forest by management type (ha):

- Hardwoods comprise 59% of the forested hectares. These forests are typically naturally managed.
- The remaining 41% of forests are softwood. Overall, although many pine stands are “planted” they are not intensively managed plantations with little or no understory; instead, once established they are left to grow and routinely have a hardwood dominated understory. Therefore, it is difficult to determine the exact percentage of true plantations in the region.

- e. Certified forest by scheme (ha): (e.g. hectares of FSC or PEFC-certified forest)

ATFS: 679,231 hectares

FSC: 265,235 hectares

SFI: 1,106,393 hectares

### Feedstock

- f. Total volume of Feedstock: estimated 300,492 metric tonnes
- g. Volume of primary feedstock: estimated 135,125 metric tons

Focusing on sustainable sourcing solutions

- h. List percentage of primary feedstock (g), by the following categories.:
  - Certified to an SBP-approved Forest Management Scheme, PEFC: estimated 10,100 metric tons
  - Not certified to an SBP-approved Forest Management Scheme, estimated 134,250 metric tons
- i. List all species in primary feedstock, including scientific name

Species List	
<b>Primary Species:</b>	<b>Miscellaneous Species (con't):</b>
Loblolly Pine ( <i>Pinus taeda</i> )	Hickory ( <i>Carya spp</i> )
<b>Miscellaneous Species:</b>	Locust ( <i>Robinia spp</i> )
Longleaf Pine ( <i>Pinus palustris</i> )	Maple ( <i>Acer spp</i> )
Sand Pine ( <i>Pinus clausa</i> )	Oak ( <i>Quercus spp</i> )
Shortleaf Pine ( <i>Pinus echinata</i> )	Persimmon ( <i>Diospyros virginiana</i> )
Virginia Pine ( <i>Pinus virginiana</i> )	Red maple ( <i>Acer rubrum</i> )
American beech ( <i>Fagus grandifolia</i> )	Red mulberry ( <i>Morus rubra</i> )
Ash ( <i>Fraxinus spp</i> )	Red oak ( <i>Quercus rubra</i> )
Basswood, American ( <i>Tilia americana</i> )	River birch ( <i>Betula nigra</i> )
Black cherry ( <i>Prunus serotina</i> )	Sassafras ( <i>Sassafras albidum</i> )
Black walnut ( <i>Juglans nigra</i> )	Sourwood ( <i>Oxydendrum arboreum</i> )
Blackgum ( <i>Nyssa sylvatica</i> )	Sugarberry ( <i>Greenwoodtia laevigata</i> )
Boxelder ( <i>Acer negundo</i> )	Sweetgum ( <i>Liquidambar styraciflua</i> )
Buckeye ( <i>Aesculus spp</i> )	Sycamore ( <i>Platanus occidentalis</i> )
Eastern cottonwood ( <i>Populus deltoides</i> )	Water oak ( <i>Quercus nigra</i> )
Elm ( <i>Ulmus spp</i> )	White oak ( <i>Quercus alba</i> )
Hackberry ( <i>Celtis occidentalis</i> )	Yellow-poplar ( <i>Liriodendron tulipifera</i> )

- j. Volume of primary feedstock from primary forest, 0 metric tons
- k. List percentage of primary feedstock from primary forest (j), by the following categories. Subdivide by SBP-approved Forest Management Schemes: 0 metric tons
- l. Volume of secondary feedstock: specify origin and type, estimated 165,367 metric tons of sawdust and wood chips
- m. Volume of tertiary feedstock: specify origin and composition, 0 metric tons

### 3 Requirement for a Supply Base Evaluation

SBE completed	SBE not completed
X	<input type="checkbox"/>

Enviva completed a SBE because there currently is no SBP-endorsed Regional Risk Assessment (RRA) in the United States. Annual reviews of the supply base evaluation have been conducted by Enviva and reviewed each year by its certifying body during annual audits.

## 4 Supply Base Evaluation

### 4.1 Scope

Enviva has implemented policies and procedures appropriate to the size and scale of its operations and no indicators were excluded. The definitions of legal and sustainable as used in Standard 1 have been reviewed and met as substantiated in the supply base evaluations. Evidence to support is offered at the supply base level. The supply base evaluation includes all primary and secondary feedstocks that are sourced from counties in all or part of Georgia, North Carolina and South Carolina.

Enviva conducted a supply base evaluation because there is no SBP approved risk assessment in the US. Enviva developed a set of locally applicable verifiers (LAVs), which include a number of publicly available sources, in addition to the internal monitoring already described. Details on LAVs are in the sections below.

### 4.2 Justification

Only a small proportion of feedstocks is sourced from SBP-approved certification programs, therefore Enviva completed a SBE to justify its rationale for SBP-compliant feedstock. Enviva did not modify any indicators. For the indicators which are not already covered by our existing certifications, Enviva used a number of LAVs to support its risk determinations including:

- FSC US Controlled Wood National Risk Assessment V1-0 D3-0 (FSC US CWNRA)
- All applicable Federal & state laws, including environmental laws, and occupational health and safety laws
- BMP implementation reports
- Stakeholder engagement
- State Natural Heritage programs
- Maps and data regarding high conservation values
- Supplier contracts
- Residual Supplier Reporting Form

### 4.3 Results of Risk Assessment

Each criterion was evaluated and measured against Enviva's existing forest certification and chain of custody programs and the listed LAV's. Information from the FSC US CWNRA was used as a baseline to determine if areas of high conservation value, biodiversity and conversion exist in Enviva's supply base area. Additionally, Enviva works with organizations like the US Endowment for Forestry and Communities, The Long Leaf Alliance, The Nature Conservancy and the American Forest Foundation and others to better understand our sourcing areas, habitats and species of concern. Based on this work and local knowledge Enviva determined a rating of "low risk" for each indicator with the exception of 2.1.1, 2.1.2, 2.2.3, 2.2.4 and 2.4.1.

Table 4. Indicators with Specified Risk Ratings

Indicator	Risk Assessment	Management system
<p>2.1.1 The BP has implemented appropriate control systems and procedures for verifying that forests and other areas with high conservation value in the Supply Base are identified and mapped.</p>	<p>The US does not have an SBP approved regional risk assessment that fully considers all of the indicators.</p>	<p>Enviva is using the FSC US CWNRA as the baseline for determining potential areas of high conservation value. Additional work with interested and engaged stakeholders (see Section 6) has been incorporated into the supply base evaluation to supplement Enviva’s ability to accurately map areas of high conservation value</p>
<p>2.1.2 The BP has implemented appropriate control systems and procedures to identify and address potential threats to forests and other areas with high conservation values from forest management activities.</p>	<p>Related to 2.1.1 If areas of high conservation value cannot be adequately identified the management systems or mitigation measures cannot be implemented to reduce risk.</p>	<p>Related to 2.1.1 Enviva’s use of the FSC US CWNRA and stakeholder engagement has adequately identified areas of high conservation value. Enviva has robust management systems that can address these areas of specified risk and manage the outcome to low risk</p>
<p>2.2.3 The BP has implemented appropriate control systems and procedures to ensure that key ecosystems and habitats are conserved or set aside in their natural state (CPET S8b).</p>	<p>Related to 2.1.1 Identification of key ecosystems and habitats is necessary to begin the process of identifying if they are properly conserved or set aside</p>	<p>Related to 2.1.1 Enviva’s use of the FSC US CWNRA and stakeholder engagement has adequately identified areas of key ecosystems and habitats. Additionally, Enviva’s Forest Conservation Fund provides grant monies to successful applicant to help them set aside or conserve forests containing high conservation values, key ecosystems and habitats. Further, Enviva’s ongoing engagement with interested stakeholders has extended our reach into additional areas of conservation (See section 6). Enviva has robust management systems that can address these areas of specified risk and manage the outcome to low risk.</p>

<p>2.2.4 The BP has implemented appropriate control systems and procedures to ensure that biodiversity is protected (CPET S5b).</p>	<p>Related to 2.1.1 Identification of areas with biodiversity concerns is necessary to begin the process of identifying if they are properly protected</p>	<p>Related to 2.1.1 Enviva’s use of the FSC US CWNRA and stakeholder engagement has adequately identified areas of key ecosystems and habitats. Additionally, Enviva’s Forest Conservation Fund provides grant monies to successful applicant to help them set aside or conserve forests containing high conservation values, key ecosystems and habitats. Further, Enviva’s ongoing engagement with interested stakeholders has extended our reach into additional areas of conservation (See section 6). Enviva has robust management systems that can address these areas of specified risk and manage the outcome to low risk.</p>
<p>2.4.1 The BP has implemented appropriate control systems and procedures for verifying that the health, vitality and other services provided by forest ecosystems are maintained or improved (CPET S7a).</p>	<p>Related to 2.1.1 Identification of forest ecosystems that provide key services is necessary to ensure proper control systems are employed to ensure forest health, vitality and other services are maintained</p>	<p>Related to 2.1.1 Enviva’s use of the FSC US CWNRA and stakeholder engagement has adequately identified key forest ecosystems. Additionally, Enviva’s Forest Conservation Fund provides grant monies to successful applicant to help them set aside or conserve forests containing high conservation values, key ecosystems and habitats. Further, Enviva’s ongoing engagement with interested stakeholders has extended our reach into additional areas of conservation (See section 6) Enviva has robust management systems that can address these areas of specified risk and manage the outcome to low risk.</p>

## 4.4 Results of Supplier Verification Programme

No indicators were defined as unspecified risk, therefore a Supplier Verification Program is not required.

## 4.5 Conclusion

Enviva has completed a robust supply base evaluation that fully meets the SBP requirements. All criteria have been fully evaluated and appropriate procedures and controls are in place to ensure successful management of the indicators with specified risk to low risk. As described above, Enviva has an extremely sophisticated data collection and monitoring program which supports the conclusions and actions in the risk assessment. Enviva's has well established and industry recognized best practices which are described in our commitment to responsible wood sourcing.

### **Enviva's Commitment to Responsible Wood Sourcing**

#### *Track & Trace®*

Enviva has implemented management systems to ensure that the wood used to make wood pellets meets our strict sustainability requirements. Specifically, Enviva maintains a robust tracking and monitoring program to ensure that all our suppliers deliver wood that is sourced according to our expectations. First, Enviva uses our SFI Fiber Sourcing verifiable monitoring program as a basis for monitoring tract harvests. In addition, we maintain a Track & Trace® database which includes information at the tract level, including data on the forest type, age, GPS coordinates, acreage, and the percent of volume from that tract being sold to Enviva. Before agreeing to accept material from a certain tract, Enviva's foresters must obtain this tract-level data and enter it into our database, which generates a unique tract ID. Then, upon delivery to the Hamlet mill, each load is linked to that tract's ID number. As a result, Enviva knows the tract-level attributes for all the primary wood entering the mill.

The Track & Trace® data collection is supported by tract audits performed by Enviva foresters. During tract audits, Enviva foresters validate data on the tract characteristics in addition to ensuring that best management practices (BMPs) for water quality are properly implemented, special sites are properly protected, and loggers are trained, along with other metrics for responsible harvesting. Enviva only accepts wood from tracts in which the logger has completed and maintains training through a SFI-approved trained logger program.

Enviva monitors all incoming raw material, to ensure that feedstock meets Enviva's sustainable sourcing policy. If any of these monitoring programs uncover issues with incoming raw material, Enviva will contact suppliers to notify them of the issue. If needed, Enviva will cease accepting deliveries from a supplier who does not perform to our sustainability standards. Enviva will not accept further deliveries from a poorly performing supplier until the supplier demonstrates the ability to adhere to Enviva's sustainability requirements.

Overall, when deciding whether to purchase primary feedstock from a given tract, Enviva's goal is to determine whether that tract will, if harvested, produce a new tract with the same desirable species

content that was present before harvest. Indicators that should be considered in this decision include forest type, location, species composition, hydrology and water flow, stand age and soil saturation. When assessing a tract for HCVs, Enviva evaluates all of these important characteristics. If there is evidence based on this first level of evaluation that the site may be an HCV area on the tract, then the forester must perform a second level review which includes an on-site assessment, data collection and documentation prior to purchase.

At the landscape scale, we endeavour to contribute to a working forest landscape with a diversity of age classes representing various forest type assemblages which can, over the long and short term, provide wildlife habitat, recreation, buffers for climate change, and other ecosystem services, while still playing a pivotal role in conservation and working forests in the Hamlet supply base area.

### *Minimizing risk from Secondary Feedstock*

Enviva purchases sawmill and wood industry residues in the form of sawdust, shavings, or other waste products from the milling process (Figure 4). Secondary feedstock suppliers receive an initial visit prior to beginning deliveries, to verify their operations and products. All sawmill and wood industry suppliers are required to complete a Residual Supplier Reporting Form, providing Enviva with information on the source of their wood as well as any certifications and species used. Enviva includes their supply areas in our supply base evaluation and provides each supplier with feedback on their supply area, noting any areas of risk that may be present. Enviva may choose to cease deliveries from a supplier which refuses to provide the necessary data for us to properly include their supply area in our risk assessment. Enviva contacts each sawmill and wood industry supplier annually to ensure their data are accurate.

Senior management is fully engaged and involved in the success of SBP Standard conformance. Enviva has a well-qualified and knowledgeable staff whom are capable of maintaining process control to achieve conformance to the SBP Standards. Each criterion has specific controls (e.g. contractual, field verification, supplier data requests) to provide Enviva with the best level of confidence to ensure conformance to the criteria included in the SBP Standard.

## 5 Supply Base Evaluation Process

Enviva has a well-rounded competent staff of professionals with many years of experience in forest certification programs, policy and procedure development and natural resource management. These collective experiences and talents provided Enviva the ability to conduct its own supply base evaluation and risk assessment.

The Enviva Hamlet supply base area includes counties in all or part of Virginia, North Carolina and South Carolina. Data from Enviva's internal Track & Trace® and other monitoring programs are reviewed annually to ensure the appropriate area is included in the risk assessment. When needed, Enviva will scope in additional counties based on information from its suppliers following the process outlined in the SBP Standards. Using all these data sources, Enviva has mapped its supply base for primary and secondary feedstock inputs for all facilities. According the USFS FIA database the total forested Enviva supply area is 9,600,850 ha and all are considered temperate forest.

Enviva used the FSC US Controlled Wood National Risk Assessment V1-0 D3-0, stakeholder engagement, its third party certified PEFC/SFI Due Diligence System and FSC Controlled Wood Risk Assessment to continually improve the SBE. Various third party data sources were also used for research in the region such as; Forest Stewardship Council, The Nature Conservancy, United States Forest Service, United States Department of Labor, United States Department of Environmental Protection, State Forest Service Divisions, National Council for Air and Stream Improvement, World Wildlife Fund, World Bank Governance Index, Illegal Logging Portal, Transparency International Conservation International, World Resources Institute, Convention on International Trade in Endangered Species, International Union for Conservation of Nature and the Databasin web mapping tool.

Continued stakeholder engagement has helped Enviva identify forest types and habitats that can benefit from forest management. Section 6 contains additional information.

## 6 Stakeholder Consultation

Enviva conducted and SBP Stakeholder Consultation in accordance with the requirements laid out in the SBP Standards. The consultation was launched on December 14, 2018 and remained open beyond the required 30 days until June 10, 2019. Enviva received no comments from the 54 stakeholders listed below.

Stakeholder	Stakeholder
25 X 25	NCASI
ABC	NRDC
AF&PA	ORNL
Claybourn Walters Logging	Pinchot
Clemson University	ProLogger/NC Forestry Association
Dogwood	PSFC
DU	SC ATFS
Duke	SC Forestry Commission
EDF	SC Forestry Association
NAFO	South Carolina Tree Farm Committee
NASF	Greenwood County Forestry/Landowner Association
NC ATFS	McCormick County Forestry/Landowner Association
NC Bioenergy Council	Laurens County Forestry/Landowner Association
NC Coastal Land Trust	Abbeville County Forestry/Landowner Association
NC Forest Service D10	Upper Savannah Land Trust
NC Forest Service D11	SC Landowners Assoc
NC Forest Service D13	SC SAF
NC Forest Service D5	SC TNC
NC Forest Service D6	SC Wildlife Fed
NC Forest Service D7	SELC
NC Landowners Assoc	The Conservation Fund
NC Native Plant Soc	Trust for Public Land
NC SAF	WMI
NC State	WWF
NC TNC	Jordan Lumber
NC Wildlife Fed	PalletOne
NC/ VA CF	Sandhill Area Land Trust

On July 1<sup>st</sup>, Ben Larson, Director of Sustainability, and Elizabeth McCombs and Chad Rogers, wood procurement foresters at Hamlet, participated in a field-day type meeting organized by the NC Sandhills Prescribed Burn Association. The Association sees Enviva’s Hamlet mill as a potential new market for the low-grade, small-diameter hardwood and pine that often needs to be removed from longleaf stands, particularly before getting prescribed fire back into the stands. For Enviva, the meeting helped engage local foresters, landowners, loggers/suppliers, NGO and agency partners in our longleaf restoration pilot at

Hamlet, through which Enviva will test and refine our procedures for recruiting and assisting private forest owners to restore their longleaf stands with biomass harvesting.

65 people attended the meeting, including about a dozen local landowners, 8-10 foresters including Milliken Forestry which is managing our FSC FM program and will be especially involved in longleaf management, three or four local loggers/suppliers, state and federal agencies (NCFCS, US Forest Service, US Fish and Wildlife Service, and the land manager from nearby Fort Bragg), NGOs including NatureServe, National Wild Turkey Federation, Longleaf Alliance, and The Nature Conservancy.

## 6.1 Response to stakeholder comments

The Enviva Hamlet Pellets, LLC stakeholder consultation ran from December 12, 2018 through July 18, 2019. Enviva received no responses from the stakeholder consultation.

## 7 Overview of Initial Assessment of Risk

## 13 Updates

### 13.1 Significant changes in the Supply Base

### 13.2 Effectiveness of previous mitigation measures

### 13.3 New risk ratings and mitigation measures

### 13.4 Actual figures for feedstock over the previous 12 months

### 13.5 Projected figures for feedstock over the next 12 months

#### Feedstock

- n. Total volume of Feedstock: estimated 300,492 metric tones
- o. Volume of primary feedstock: estimated 135,125 metric tons
- p. List percentage of primary feedstock (g), by the following categories.:
  - Certified to an SBP-approved Forest Management Scheme, PEFC: estimated 10,100 metric tons
  - Not certified to an SBP-approved Forest Management Scheme, estimated 134,250 metric tons
- q. List all species in primary feedstock, including scientific name

Species List	
<b>Primary Species:</b>	<b>Miscellaneous Species (con't):</b>
Loblolly Pine ( <i>Pinus taeda</i> )	Hickory ( <i>Carya spp</i> )
<b>Miscellaneous Species:</b>	Locust ( <i>Robinia spp</i> )
Longleaf Pine ( <i>Pinus palustris</i> )	Maple ( <i>Acer spp</i> )
Sand Pine ( <i>Pinus clausa</i> )	Oak ( <i>Quercus spp</i> )
Shortleaf Pine ( <i>Pinus echinata</i> )	Persimmon ( <i>Diospyros virginiana</i> )
Virginia Pine ( <i>Pinus virginiana</i> )	Red maple ( <i>Acer rubrum</i> )
American beech ( <i>Fagus grandifolia</i> )	Red mulberry ( <i>Morus rubra</i> )
Ash ( <i>Fraxinus spp</i> )	Red oak ( <i>Quercus rubra</i> )
Basswood, American ( <i>Tilia americana</i> )	River birch ( <i>Betula nigra</i> )
Black cherry ( <i>Prunus serotina</i> )	Sassafras ( <i>Sassafras albidum</i> )
Black walnut ( <i>Juglans nigra</i> )	Sourwood ( <i>Oxydendrum arboreum</i> )
Blackgum ( <i>Nyssa sylvatica</i> )	Sugarberry ( <i>Greenwoodtia laevigata</i> )
Boxelder ( <i>Acer negundo</i> )	Sweetgum ( <i>Liquidambar styraciflua</i> )
Buckeye ( <i>Aesculus spp</i> )	Sycamore ( <i>Platanus occidentalis</i> )
Eastern cottonwood ( <i>Populus deltoides</i> )	Water oak ( <i>Quercus nigra</i> )
Elm ( <i>Ulmus spp</i> )	White oak ( <i>Quercus alba</i> )
Hackberry ( <i>Celtis occidentalis</i> )	Yellow-poplar ( <i>Liriodendron tulipifera</i> )

- r. Volume of primary feedstock from primary forest, 0 metric tons
- s. List percentage of primary feedstock from primary forest (j), by the following categories. Subdivide by SBP-approved Forest Management Schemes: 0 metric tons
- t. Volume of secondary feedstock: specify origin and type, estimated 165,367 metric tons of sawdust and wood chips
- u. Volume of tertiary feedstock: specify origin and composition, 0 metric tons

## 14 Appendix Listing of US Ratified ILO Conventions and Multi-lateral Environmental Instruments

### US ratified ILO Conventions

- C053 Officers Competency Certificates Convention, 1936
- C055 Shipowners' Liability (Sick and Injured Seamen) Convention, 1936
- C058 Minimum Age (Sea) Convention (Revised), 1936
- C074 Certification of Able Seamen Convention, 1946
- C080 Final Articles Revision Convention, 1946
- C105 Abolition of Forced Labor Convention, 1957
- C147 Merchant Shipping (Minimum Standards) Convention, 1976
- C150 Labor Administration Convention, 1978
- C160 Labor Statistics Convention, 1985
- C176 Safety and Health in Mines Convention, 1995
- C182 Worst Forms of Child Labor Convention, 1999

### US ratified multi-lateral Environmental instruments include:

- Convention for the Long-range Transboundary Air Pollution
- Vienna Convention for the Protection of the Ozone Layer
- United Nations Framework Convention on Climate Change
- Convention for the Protection and Development of Marine Environment of the Wider Caribbean Region
- London Convention
- International Convention for the Prevention of Pollution from Ships, 1973 and subsequent six Protocols
- Protocol on Environmental Protection to the Antarctic Treaty
- The North American Agreement on Environmental Cooperation

# Annex 1: Detailed Findings for Supply Base Evaluation Indicators

## Preamble

Enviva's Hamlet Pellet mill is located in the United States. The country has a robust legal system developed using democratic processes. The "rule of law" social system is acknowledged by the World Bank as ranking in the top 90th percentile in *Government Effectiveness* and *Rule of Law and Regulatory Quality*, indicating that the United States has proven that it possesses effective means to ensure all laws and regulatory requirements are met or addressed if lacking through legal recourse. All verifiers were reviewed by third party auditors. **Internal verifiers** (identified in bold text) may contain sensitive information that cannot be made publicly available. External verifiers are publicly available.

Enviva used the FSC US Controlled Wood Risk Assessment V1.0 D3.0 (FSC US CWNRA) as the basis for its risk assessment and supply base evaluation. SBP has yet to receive a Regional Risk Assessment (RRA) for the US to evaluate for approval and considers all of the currently available assessment resources in and of themselves to be only partially adequate in assessing high conservation value and conversion indicators.

If a BP is referencing a publicly available third party multi-stakeholder risk assessment such as the FSC US CWNRA, and where the nature and location of the specified risk are located within the BP's Supply Base, and the assessment of risk has been completed, the risk rating assigned by the authors should be used unless the BP can provide additional new verification data to prove low risk.

## Enviva's forestry certifications

Enviva maintains third party certifications including:

- ©Sustainable Biomass Program
- American Tree Farm System™ Independently Managed Group
- Forest Stewardship Council® (FSC) Chain of Custody and Controlled Wood Standard
- Program for the Endorsement of Forest Certifications™ (PEFC) Chain of Custody
- Sustainable Forestry Initiative® (SFI) Wood Sourcing
- Sustainable Forestry Initiative® (SFI) Chain of Custody

## Tools used to develop the Supply Base Evaluation

Enviva developed this supply base evaluation using the FSC US CWNRA and its PEFC Due Diligence System as a basis. Enviva also used a report prepared for the American Hardwood Export Council (AHEC) entitled, *Assessment of Lawful Harvesting & Sustainability of US Hardwood Exports*. Other sources of information include but are not limited to; FSC High Conservation Area Mapping tool, The Nature Conservancy website and various shapefiles, World Wildlife Fund, World Bank Governance Index, Illegal Logging Portal, Transparency International, Green Peace, Conservation International, World Resources Institute, Convention on International Trade in Endangered Species, International Union for Conservation of Nature and the Databasin web mapping tool.

## Supplier level assessment

Enviva uses its proprietary Track & Trace for all primary wood purchases. Specifically, Enviva maintains a robust tracking and monitoring program to ensure that all our suppliers deliver wood that is sourced according to our expectations. The information Enviva collects for every tract its suppliers harvest includes; data on the forest type, age, GPS coordinates, acreage, and the percent of volume from that tract being sold

to Enviva. Before agreeing to accept material from a certain tract, Enviva’s Procurement Foresters must obtain this tract-level data and enter it into our database, which generates a unique tract ID. Then, upon delivery to the mill, each load is linked to that tract’s ID number. As a result, Enviva knows the tract-level attributes for all the primary wood entering the mill.

Enviva developed the Enviva Forest Conservation Fund HCV Tract Approval Process (HCV Tract Approval Process) to ensure forest management activities do not harm sensitive eco-systems, habitats or threaten biodiversity in its sourcing practices. Each tract is assessed using a set of criteria that include the tract location within known bottomland forest settings. Every tract is evaluated for forest health concerns, wildlife considerations, location within the landscape, conservation value and other criteria. Enviva will only purchase wood from a tract if the assessment determines harvesting is the best outcome for the forest.

Enviva's annual District of Origin and Supplier Data Request Form process allows secondary feedstock suppliers to meet the requirements described in SBP's Normative Interpretations Document. The guidance found in Standard 2 Section 8.4 describes the procedures a Biomass Producer may use to ensure secondary feedstock sources can be proven SBP-compliant. Enviva collects information from each supplier including; the suppliers sourcing area, species consumed by the mill, certification information, etc, and evaluates each secondary feedstock supplier in relation to Enviva’s supply base evaluation to determine if the feedstock they are supplying is SBP-compliant or SBP-controlled. The evidence collected and evaluated by Enviva to determine the risk of a supplier sourcing practices and supply area are low risk for all indicators.

This approach is also in alignment with SBP Guidance Document: Meeting SBP Criteria in relation to protecting exceptional conservation values in the southern US. The process Enviva employ's through its District of Origin Process and annual Supplier Data Request process ensures Enviva can meet and exceed the guidance provided in the document therefore providing conformance to indicators 2.1.1 and 2.1.2 and confirming low risk.

**Forestry best management practices**

Many of the indicators contain references to forestry BMP's (BMP). BMP guidelines were developed at the state level in response to the federal Clean Water Act requirement pertaining to non-point source water quality. Most states have monitoring programs to evaluate BP effectiveness and compliance rates, and some states require their use. Enviva and many other wood industry companies, however, require the use of forestry BMP's regardless of the state's stance. Table 1 below\* shows the high rate of BMP compliance across Enviva's supply base area. Though forestry BMP’s are not a complete solution to many of the criteria they do serve as a measure of sound forestry practices.

Table 1. Selected Percent Forestry Best Management Compliance Rates by State<sup>1</sup>

State	Timber Harvesting	Forest Roads	Skid Trails	Log Landings	Stream Crossings	SMZ <sup>2</sup>	Wetlands	Reforestation	State Average
NC		84	82		72	91			85
SC	94	98			81	92		100	91
VA		94	84	70	68	86	91		90

### **Means of Verification**

SBP's definition of means of verification: A systematic collection and review of objective evidence to verify compliance with a specified criterion. Evidence may include records, statements of fact or other information which are verifiable.

In some indicators this can be achieved with accessible third-party information. For instance, indicator 2.1.1 the identification of areas with high conservation values can be accomplished using publicly available third-party sources of information though Enviva goes farther by continually engaging with willing stakeholders like The Nature Conservancy, The Forest Trust and others interested in meaningful engagement. We do this to ensure we have the most up to date information and some of that work is proprietary.

In other indicators such as 2.1.2 proof of implementation of appropriate controls and procedures to identify and address potential threats requires signed contract, internal audit forms, assessment processes. Many if these documents contain sensitive information about our suppliers, where and how they purchase wood and performance information necessary to conform to the SBP Standards. Some of the documents are internal working and procedures documents Enviva staff use to ensure we consistently perform our tasks in a manner that can be verified through third-party audits. The approach aligns with SBP Guidance Document: Assessment of risk, means of verification and mitigation measures in the southeast US.

	Indicator
1.1.1	The Biomass Producer's Supply Base is defined and mapped.
Finding	<p>Primary feedstock suppliers are traced through Enviva's proprietary Track &amp; Trace Program that collects information at the tract level, including data on the forest type, age, GPS coordinates, acreage, and the percent of volume from that tract being sold to Enviva. Before agreeing to accept material from a certain tract, Enviva's Foresters must obtain this tract-level data and enter it into our database, which generates a unique tract ID. Then, upon delivery to the Ahoskie mill, each load is linked to that tract's ID number. As a result, Enviva knows the tract-level attributes for all the primary wood entering the mill.</p> <p>Supplier sourcing areas are tracked through a robust District of Origin and Supplier Data Request process that annually require suppliers to describe: their supply area's country of origin, size of their sourcing area, species used, and how they track their primary wood supply. Enviva's supply base area includes counties in North Carolina, South Carolina and Virginia. Data is entered into computer programs and reviewed annually to ensure appropriateness. This information is used to define the supply area and create maps.</p> <p>ENV-COC-02 Controlled Sourcing Procedures is an internal document describing the process Enviva follows to ensure it knows where feedstocks originate.</p> <p>ENV-COC-03 Controlled Source Risk Assessment is defines how the supply area is assessed for risk to satisfy PEFC requirements, the basis of the SBP system.</p> <p><u>Conclusion</u> Enviva's Chain of Custody certifications require the company to develop and maintain a Controlled Wood Risk Assessment/ Due Diligence System that ensure Enviva annually reviews its supply base area for accuracy. The risk of wood from un-known regions entering Enviva's supply is low</p>
Means of Verification	<ul style="list-style-type: none"> <li>a. Preamble citations</li> <li>b. <b>ENV-COC-02 Controlled Sourcing Procedure</b></li> <li>c. <b>District of Origin Supplier Data Request Form</b></li> <li>d. <b>ENV-COC-03 Controlled Source Risk Assessment</b></li> </ul>

	Indicator
1.1.2	Feedstock can be traced back to the defined Supply Base.
Finding	<p>Primary feedstock suppliers are traced through Enviva's proprietary Track &amp; Trace Program that collects information at the tract level, including data on the forest type, age, GPS coordinates, acreage, and the percent of volume from that tract being sold to Enviva. Before agreeing to accept material from a certain tract, Enviva's Foresters must obtain this tract-level data and enter it into our database, which generates a unique tract ID. Then, upon delivery to the Ahoskie mill, each load is linked to that tract's ID number. As a result, Enviva knows the tract-level attributes for all the primary wood entering the mill.</p>

	<p>Supplier sourcing areas are tracked through a robust District of Origin and Supplier Data Request process that annually require suppliers to describe: their supply area's country of origin, size of their sourcing area, species used, and how they track their primary wood supply. Enviva's supply base area includes counties in North Carolina, South Carolina and Virginia. Data is entered into computer programs and reviewed annually to ensure appropriateness.</p> <p>Enviva maintains FSC and/or PEFC CoC certification for all Enviva pellet mills. These certifications track wood through the supply chain, while also ensuring unwanted sources of wood do not enter the supply chain.</p> <p>Master Wood Purchase Agreements contain recital requiring the supplier to agree to abide by Enviva's legal and sustainability commitments including a provision to allow Enviva to periodically audit suppliers to ensure conformance.</p> <p>ENV-SFI-01 SFIS Certified Sourcing Implementation Manual is Enviva's SFI feedstock sourcing manual. Indicator 2.1.2 requires the use of written agreements (Master Wood Purchase Agreement) for all feedstocks sourced from the forest and the use of forestry best management practices. Enviva extends this requirement to secondary feedstock sources as well. This means Enviva will only purchase feedstocks from companies where we have an existing business relationship.</p> <p>ENV-PEFCCOC-01 PEFC Chain of Custody Procedure and ENV-COC-02 Controlled Sourcing Procedures describe the work flow for ensuring Enviva satisfies the chain of custody requirements for its three CoC systems. These systems are designed to follow both certified feedstocks and FSC Controlled Wood/Controlled Source feedstocks to their county of origin, at a minimum.</p> <p>The District of Origin Data Request Form is a document used to collect information from secondary feedstock suppliers to establish the counties they source wood.</p> <p><u>Conclusion</u>                  Enviva's Chain of Custody certifications require the company to develop and maintain a Controlled Wood Risk Assessment/ Due Diligence System that ensures that the origin of all feedstocks is known.</p>
<p>Means of Verification</p>	<ul style="list-style-type: none"> <li>a. Preamble citations</li> <li>b. <b>ENV-SFI-01 SFI Certified Sourcing Implementation Manual</b></li> <li>c. <b>Track &amp; Trace Program</b></li> <li>d. <b>ENV-PEFCCOC-01 PEFC Chain of Custody Procedure</b></li> <li>e. <b>ENV-COC-02 Controlled Sourcing Procedure</b></li> <li>f. <b>District of Origin Supplier Data Request Form</b></li> <li>g. <b>Master Wood Purchase Agreement</b></li> </ul>

<p>Risk Rating</p>	<p><input checked="" type="checkbox"/> <b>Low Risk</b>                      <input type="checkbox"/> <b>Specified Risk</b>                      <input type="checkbox"/> <b>Unspecified Risk at RA</b></p>

	Indicator
1.1.3	The feedstock input profile is described and categorised by the mix of inputs.
Finding	<p>Enviva tracks purchased and consumed material by product type (in-woods chips, mill residual chips, sawdust and shavings) and general species groupings of softwood or hardwood. Wood is stored at the mill site by product/species and input is verified by monthly inventory processes. Enviva maintains FSC and/or PEFC CoC certification for this pellet mill.</p> <p>ENV-PEFCCOC-01 PEFC Chain of Custody Procedure requires a PEFC certificate holder to develop a process to describe feedstock profiles for the purpose of tracking through processing.</p> <p>ENV-COC-02 Controlled Sourcing Procedures describes how feedstock purchases are categorized before purchase.</p> <p>The Monthly Wood Excel is a mill site-specific workbook used to track tons of each feedstock type into and through the process from raw material to final product.</p> <p><u>Conclusion</u> These certifications track feedstock through the supply chain, while also ensuring unwanted sources of wood do not enter the supply chain.</p>
Means of Verification	<ul style="list-style-type: none"> <li>a. Preamble citations</li> <li>b. <b>ENV-PEFCCOC-01 PEFC Chain of Custody Procedure</b></li> <li>c. <b>ENV-COC-02 Controlled Sourcing Procedure</b></li> <li>d. <b>Monthly Wood Excel</b></li> </ul>
Evidence Reviewed	All means of verification reviewed
Risk Rating	<input checked="" type="checkbox"/> <b>Low Risk</b> <input type="checkbox"/> <b>Specified Risk</b> <input type="checkbox"/> <b>Unspecified Risk at RA</b>

	Indicator
1.2.1	The Biomass Producer has implemented appropriate control systems and procedures to ensure that legality of ownership and land use can be demonstrated for the Supply Base.
Finding	<p>Enviva uses contractual language in its Master Wood Purchase Agreement requiring supplier to abide by all relevant laws and regulations. The contract includes the requirement to avoid the following unacceptable sources wood:</p> <ul style="list-style-type: none"> <li>- Illegally harvest wood;</li> <li>- Wood harvested in violation of traditional and civil rights;</li> <li>- Wood harvested from forests where high conservation values are threatened by management activities;</li> <li>- Wood harvested from old growth or semi-natural forests being converted to plantations or non-forest use;</li> <li>- Wood from forests where genetically modified trees are planted;</li> <li>- Wood in which there was a violation of the ILO Declarations on fundamental principle and rights at work.</li> </ul> <p>Enviva requires all suppliers to sign a Master Wood Supply Agreement annually.</p>

	<p>Enviva's Track &amp; Trace Program requires suppliers to provide GPS coordinates, landowner name and other pertinent information for each track they harvest and send feedstock to Enviva which enables Enviva to use tax maps to verify ownership if needed.</p> <p>Enviva's secondary feedstock District of Origin Process ensure it knows the sources of its secondary feedstocks. Enviva evaluates each secondary feedstock supplier to ensure it only purchases wood from credible suppliers.</p> <p>ENV-COC-03 Controlled Sources Risk Assessment demonstrates that the rule of law and public agency governance are upheld and so illegality is considered low risk. Enviva has implemented procedures to conform to EUTR.</p> <p>Findings are incorporated into Enviva's ENV-COC-03 Controlled Sources Risk Assessment and revisions to the Master Wood Purchase Agreement.</p> <p>The FSC CWNRA finds  1.1 Land tenure and management rights finds the US legality of ownership to be a low risk citing landownership records in the US are highly reliable and frequently used by banking institutions to issue mortgages generally requiring title clearances.</p> <p>The FSC US CWNRA cited the Seneca Creek Associates, LLC report entitled, <i>Assessment of Lawful Harvesting &amp; Sustainability of US Hardwood Exports</i>, "The vast majority of private landowners own small family forests that average less than 10 hectares in size. Numerous legal processes are available to landowners to resolve disputes involving proper title and/or the unauthorized taking or sale of timber property." Seneca Creek Report 2008, p ii.</p> <p>Further, "Comparisons of international governance indicators, such as those compiled by the World Bank, strongly indicate that the US is perceived as a country with a high regard for the rule of law, an effective environmental, labor and public welfare regulatory environment, and a low level of corruption." Seneca Creek Report 2008, p iii.</p> <p>US ranks in the top 88th percentile in Regulatory Quality in the World Bank, Worldwide Governance Indicators and in the top 90th percentile in Rule of Law. Evidence of the effectiveness of law enforcement is evident in news reporting and reveals no widespread or systematic criminal activity in the Enviva supply base area.</p> <p>Enviva also uses sources such as the Illegal Logging Portal to assess the likelihood of illegal logging activity in the supply area. In addition, each state in the supply base area has laws protecting landownership rights and governing land use.</p> <p>Enviva's Sustainability Policy, Responsible Wood Supply Program publicly describes Enviva's commitment to avoid illegal sources of wood.</p> <p>Master Wood Purchase Agreements contain recital requiring the supplier to agree to abide by Enviva's legal and sustainability commitments including a provision to allow Enviva to periodically audit suppliers to ensure conformance.</p> <p>SFI Fiber Sourcing Standard Objective 4 requires a certificate holder to comply with all applicable federal, provincial and local laws and regulations. ENV-SFI-01 SFI Certified Sourcing Implementation Manual describes processes and internal documents Enviva uses to meet the Objective</p> <p>The PEFC Chain of Custody Standard requires the certificate holder to ensure it knows where feedstocks originate and ensure wood is legally sourced. ENV-PEFCCOC-01 PEFC Chain of Custody and ENV-COC-02 Controlled Sourcing Procedure are Enviva documents describing the work flow to ensure feedstock are legally sourced.</p>
--	--

	<p>ENV-COC-03 Controlled Sources Risk Assessment contains the work done to determine if illegal logging and timber theft are a risk in the supply area. This document uses many of the same sources as the FSC US CWNRA. Both conclude illegal logging is a low risk in the Enviva supply area.</p> <p>Enviva will only purchase feedstocks from suppliers who it has an established business relationship and a signed agreement. The Master Wood Purchase Agreement has among its many recitals requirements for feedstock supplier to ensure legality of ownership. This is evaluated as part of periodic supplier audits.</p> <p><u>Conclusion</u> The risk of illegally harvested wood or wood from land use change entering Enviva's supply chain is low</p>
Means of Verification	<ul style="list-style-type: none"> <li>a. Preamble citations</li> <li>b. 	Indicator
1.5.1	The Biomass Producer has implemented appropriate control systems and procedures to verify that feedstock is supplied in compliance with the requirements of CITES.
Finding	<p>Enviva uses contractual language in its Master Wood Purchase Agreement requiring supplier to abide by all relevant laws and regulations. The contract includes the requirement to avoid the following unacceptable sources wood:</p> <ul style="list-style-type: none"> <li>- Illegally harvest wood;</li> <li>- Wood harvested in violation of traditional and civil rights;</li> <li>- Wood harvested from forests where high conservation values are threatened by management activities;</li> <li>- Wood harvested from old growth or semi-natural forests being converted to plantations or non-forest use;</li> <li>- Wood from forests were genetically modified trees are planted;</li> <li>- Wood in which there was a violation of the ILO Declarations on fundamental principle and rights at work.</li> </ul> <p>Enviva requires all suppliers to sign an annual Master Wood Supply Agreement.</p> <p>Enviva maintains an FSC Controlled Wood Risk Assessment and a PEFC Due Diligence System covering the Enviva supply base area. These assessments determined the supply base area as a low risk for the potential to source CITES species. CITES enforcement is controlled at the federal level involving US Customs and Border Protection, Animal and Plant Health Inspection Services and the US Fish and Wildlife Service.</p> <p>Enviva policies declare that Enviva will avoid being directly or indirectly involved in the purchase of raw material that is in violation of CITES.</p> <p>Findings are incorporated into Enviva's ENV-COC-03 Controlled Sources Risk Assessment and revisions to the Master Wood Purchase Agreement.</p> <p>Some FSC US CWNRA finding related to this indicator include</p> <p>1.19 Customs regulations – The Lacey Act and other US code and enforcement find there is a low risk of a US company purchasing species listed by CITES.</p> <p>1.20 CITES finds no tree species with commercial timber value is listed on the CITES Appendices determining the there is a low risk of sourcing CITES species in North America.</p> <p>1.21 Legislation requiring due diligence/due care procedures cites the Lacey Act as the legislation that prohibits the importation of illegally sourced wood into the US.</p> <p>None of the tree species Enviva uses are on the CITES list. None of the feedstock used come from outside of the US</p> <p>The PEFC Chain of Custody Standard requires the certificate holder to ensure it knows feedstocks meet CITES requirements. ENV-PEFCCOC-01 PEFC Chain of Custody and ENV-COC-02 Controlled Sourcing Procedure are Enviva documents describing the work flow to ensure feedstock are in conformance.</p> <p>ENV-COC-03 Controlled Sources Risk Assessment contains the work done to determine if CITES species are present in the supply area. This document uses many if the same sources as the FSC US CWNRA. Both conclude sourcing CITES listed species is a low risk in the Enviva supply area.</p>

	<p>Enviva’s District of Origin Data Request Form asks the supplier to list the species used at its mill. These species lists are checked against the CITES requirements and are checked during periodic supplier audits.</p> <p>Master Wood Purchase Agreements contain recital requiring the supplier to agree to abide by Enviva’s legal and sustainability commitments including a provision to allow Enviva to periodically audit suppliers to ensure conformance.</p> <p>Signed Master Wood Purchase Agreements allow Enviva to periodically audit suppliers to ensure conformance.</p> <p><u>Conclusion</u> There is a low risk of CITES species being used as feedstock.</p>

	Indicator
<b>1.6.1</b>	<p>The Biomass Producer has implemented appropriate control systems and procedures to ensure that feedstock is not sourced from areas where there are violations of traditional or civil rights.</p>
Finding	<p>Enviva uses contractual language in its Master Wood Purchase Agreement requiring supplier to abide by all relevant laws and regulations. The contract includes the requirement to avoid the following unacceptable sources wood:</p> <ul style="list-style-type: none"> <li>- Illegally harvest wood;</li> <li>- Wood harvested in violation of traditional and civil rights;</li> <li>- Wood harvested from forests where high conservation values are threatened by management activities;</li> <li>- Wood harvested from old growth or semi-natural forests being converted to plantations or non-forest use;</li> <li>- Wood from forests where genetically modified trees are planted;</li> <li>- Wood in which there was a violation of the ILO Declarations on fundamental principle and rights at work.</li> </ul> <p>Enviva requires all suppliers to sign an annual Master Wood Supply Agreement.</p> <p>Enviva's ENV-COC-03 Controlled Sources Risk Assessment is reviewed annually to ensure Enviva is aware of changes. The analysis includes a review of laws governing traditional and civil rights.</p> <p>Findings are incorporated into Enviva's ENV-COC-03 Controlled Sources Risk Assessment and revisions to the Master Wood Purchase Agreement.</p> <p>Some of the FSC US CWNRA findings applicable to this indicator</p>

	<p>1.13 Customary rights – “The risk of violating a right held through adverse possession is low. If the right is being held openly and exclusively, the potential violator should be able to discover it through inspection of the land. Overall, customary rights being are not important in forest management, with the possible exception of Native American treaty rights. On balance the risk for this category is assessed as low.”</p> <p>1.15 Indigenous peoples rights – Violations of Indigenous peoples rights are considered a low risk because of the legal relationship between the federal government and Native American tribes. The two treat each other as sovereigns with treaties that outline tribal rights.</p> <p>2.1 The forest sector is not associated with violent armed conflict, including that which threatens national or regional security and/or linked to military control to be low risk in the US</p> <p>2.2 Labor rights are respected including rights as specified in ILO Fundamental Principle and Rights at Work as low risk in the US</p> <p>2.3 The rights of Indigenous and Traditional Peoples are upheld In the United States, land use and tenure questions have long been decided and in the southeast, there are no indigenous people groups with controversial traditional or civil rights to forestlands. Enviva has a Controlled Sources Risk Assessment System in place to ensure operations do not violate traditional or civil rights. Existing policies declare that Enviva will avoid being directly or indirectly involved in the violation of traditional and human rights. The Enviva wood supply area is not designated within a country or district that is a source of conflict timber. There are tribal and federal government owned Native American reservations within the supply base, but no traditional or civil rights issues have been reported.</p> <p>The FSC US CWNRA concluded;</p> <p>“Within the U.S. there is no UN Security Council ban on timber exports, the areas are not designated as a source of conflict timber, child labor does not occur systematically, and ILO Fundamental Principles and rights at work are generally respected. In addition, the U.S. has recognized and equitable processes in place to resolve conflicts of substantial magnitude pertaining to traditional rights including use rights, cultural interests or traditional cultural identity. In the U.S., Native Americans with a land base are recognized as Sovereign Nations and accorded rights to manage their land and affairs. In addition, Native Americans have an equitable process to resolve conflicts over land management. Through the U.S. court system, many Native American tribes have challenged, won decisions, and resolved issues concerning land management and use rights. There are many examples within the U.S. where tribes have successfully been able to exercise treaty rights through formal and informal conflict resolutions systems.”</p> <p>The Seneca Creek, LLC report entitled, <i>Assessment of Lawful Harvesting &amp; Sustainability of US Hardwood Exports</i> found the same to be true.</p> <p>SFI Fiber Sourcing Standard requires a certificate holder to have written policies to “comply with social laws, such as those covering civil rights, equal employment opportunities, anti-discrimination and anti-harassment measures, worker’s compensation, indigenous peoples’ rights, workers’ and communities’ right to know, prevailing wages, workers right to organize, and occupational health and safety.” ENV-SFI-01 SFI Certified Sourcing Implementation Manual describes processes and internal documents Enviva uses to meet the requirements.</p> <p>The PEFC Chain of Custody Standard requires the certificate holder to demonstrate it avoids sources that violate traditional and human rights. ENV-PEFCCOC-01 PEFC Chain</p>
--	--

	<p>of Custody and ENV-COC-02 Controlled Sourcing Procedure are Enviva documents describing the work flow to ensure feedstocks meet these requirements.</p> <p>ENV-COC-03 Controlled Sources Risk Assessment contains the work done to determine if there is a risk of violating traditional and civil rights in the supply area. This document uses many if the same sources as the FSC US CWNRA. Both conclude a low risk of violating traditional and civil rights in the Enviva supply area.</p> <p>Enviva will only purchase feedstocks from suppliers who it has an established business relationship and a signed agreement. The Master Wood Purchase Agreement has among its many recitals requirements for feedstock supplier to ensure legality of ownership. This is evaluated as part of periodic supplier audits.</p> <p>Master Wood Purchase Agreements contain recital requiring the supplier to agree to abide by Enviva’s legal and sustainability commitments including a provision to allow Enviva to periodically audit suppliers to ensure conformance.</p> <p>Signed Master Wood Purchase Agreements allow Enviva to periodically audit suppliers to ensure conformance.</p> <p>Enviva’s Sustainability Policy, Responsible Wood Supply Program publicly describes Enviva’s commitment to avoid sources of wool that violate traditional and civil rights.</p> <p><b>Conclusion</b> There is a low risk Enviva’s sourcing practices are a threat to traditional or civil rights.</p>

	Indicator
2.1.1	The Biomass Producer has implemented appropriate control systems and procedures for verifying that forests and other areas with high conservation values are identified and mapped.
Finding	<p>Enviva’s Controlled Sources Risk Assessment is reviewed annually to ensure it Enviva is aware of forest impact assessments, planning implementation and monitoring efforts, forestry best management practices in all of Enviva’s supply areas. The analysis includes the identification of forested areas that may contain high conservation values.</p> <p>Enviva used the FSC US CWNRA as a basis to identify and map forested areas of high conservation value, areas of high biodiversity and species or concern. The SBP Guidance Document: Assessment of Risk, Means of Verification and Mitigation Measures in the Southeast US provides the platform for using the FSC US CWNRA as a basis for the BP’s risk assessment.</p> <p>Enviva only uses woody biomass as a feedstock. Non-forested areas of high conservation value are excluded from the supply base evaluation. Enviva’s sourcing policies and suppliers do not impact these non-forested areas. The definition of forest land is defined according to the USFS as, “Land that has at least 10 percent crown cover by live tally trees of any size or has had at least 10 percent canopy cover of live tally species in the</p>

past, based on the presence of stumps, snags, or other evidence. To qualify, the area must be at least 1.0 acre in size and 120.0 feet wide. Forest land includes transition zones, such as areas between forest and non-forest lands that meet the minimal tree stocking/cover and forest areas adjacent to urban and built-up lands. Roadside, streamside, and shelterbelt strips of trees must have a width of at least 120 feet and continuous length of at least 363 feet to qualify as forest land. Unimproved roads and trails, streams, and clearings in forest areas are classified as forest if they are less than 120 feet wide or less than an acre in size. Tree-covered areas in agricultural production settings, such as fruit orchards, or tree-covered areas in urban settings, such as city parks, are not considered forest land.”

The areas of high conservation value described and mapped in the FSC US CWNRA Indicator 3 were compared to the defined supply area. The FSC US CWNRA identified many areas of high conservation value, biodiversity and species that could be affected by harvesting activities. This supply base evaluation only includes those the authors determined to be specified risk. The supply area overlaps the following areas of high conservation value.

**Native Longleaf Pine Systems** – these forest systems are at risk in 23 counties across the southern portion of the supply area. Native longleaf systems threats vary across its natural range with suppression of fire being the greatest concern. Other concerns include conversion to other pine types and incompatible forest management practices.

**Late Successional Bottomland Hardwoods** – found throughout the south in the floodplains of rivers and streams the forests are periodically flooded or saturated. Variations in structure are determined by the location of the late successional bottomland forest. Generally, 80 years or older the forest is better defined by structure; closed canopy, large wood debris, standing hollow trees and little ground vegetation.

**Cape Fear Arch Critical Biodiversity Area** – The geologic and hydrologic history of the Cape Fear Arch region have resulted in a diversity of wet and dry habitats. This diversity in addition to the sand and limestone deposits that have resulted in a very high diversity of natural communities and associated plant and animal species, particularly in pocosin and longleaf pine habitats. When the canopy has been completely removed through timber harvest, pocosins often do not regenerate.

SFI Fiber Sourcing Standard requires a certificate holder to promote and conserve biological diversity by doing one or more of the following:

- a. Promotion of biological diversity utilizing information from organizations such as World Resource Institute, The Nature Conservancy, NatureServe, Conservation International, State Wildlife Action Plans and assessments;
- b. Conducting local and regional level landscape assessments;
- c. Involvement with local or regional conservation efforts;
- d. Use of relevant information on biological diversity from credible sources (such as those noted above) in approved training and education programs; and
- e. Other credible approaches

ENV-SFI-01 SFI Certified Sourcing Implementation Manual describes processes and internal documents Enviva uses to meet the SFI requirements related to Objective 1 “Biodiversity in Fiber Sourcing. To address the practice of sustainable forestry by conserving biological diversity”. Further, as part of our Responsible Sourcing Policy, we solicit and receive detailed feedback on our current policies and suggestions for how to improve it from the following non-profit and agencies:

- The Association of Fish and Wildlife Agencies and The National Wildlife Federation

	<ul style="list-style-type: none"> <li>• The Nature Conservancy</li> <li>• Audubon</li> <li>• World Wildlife Fund</li> <li>• National Council for Air and Stream Improvement</li> <li>• The Conservation Fund</li> <li>• The Forest Trust</li> </ul> <p>The PEFC Chain of Custody Standard requires the certificate holder to ensure it knows where feedstocks originate and evaluate its supply area to determine if there are areas of high conservation value as part of its Due Diligence System. ENV-COC-03 Controlled Sources Risk Assessment is Enviva’s PEFC Due Diligence System and it contains the work done to determine where areas of high conservation are located within the supply area. This document uses many if the same sources as the FSC US CWNRA.</p> <p><u>Conclusion</u> According to SBP Guidance Document: Assessment of Risk, Means of Verification and Mitigation Measures in the Southeast US, “SBP has yet to receive a Regional Risk Assessment (RRA) for the US to evaluate for approval and considers all of the currently available assessment resources in and of themselves to be only partially adequate in assessing high conservation value and conversion indicators.” Use of the FSC CWNRA is suggested but is considered incomplete.</p>

Comment or Mitigation Measure	<p><u>Management System</u> Enviva will annually review it’s Means of Verification and engage with Stakeholders to ensure it can accurately identify and map forests and other areas of high conservation values in its supply base area. As new information is found it will be incorporated into the supply base evaluation. Enviva engages with willing stakeholders to continually assess for potential areas of high conservation value (<a href="https://www.greenbiz.com/article/stakeholder-engagement-how-enviva-moved-crisis-collaboration">https://www.greenbiz.com/article/stakeholder-engagement-how-enviva-moved-crisis-collaboration</a>). We find these engagements and subsequent collaborations to be both enlightening and beneficial in the promotion of sustainable forest management</p>
Risk Rating After Mitigation	<input checked="" type="checkbox"/> <b>Low Risk</b> <input type="checkbox"/> <b>Specified Risk</b> <input type="checkbox"/> <b>Unspecified Risk at RA</b>

	Indicator
2.1.2	The Biomass Producer has implemented appropriate control systems and procedures to identify and address potential threats to forests and other areas with high conservation values from forest management activities.

<p>Finding</p>	<p>Enviva uses contractual language in its Master Wood Purchase Agreement requiring supplier to abide by all relevant laws and regulations. The contract includes the requirement to avoid the following unacceptable sources wood:</p> <ul style="list-style-type: none"> <li>- Illegally harvest wood;</li> <li>- Wood harvested in violation of traditional and civil rights;</li> <li>- Wood harvested from forests where high conservation values are threatened by management activities;</li> <li>- Wood harvested from old growth or semi-natural forests being converted to plantations or non-forest use;</li> <li>- Wood from forests where genetically modified trees are planted;</li> <li>- Wood in which there was a violation of the ILO Declarations on fundamental principle and rights at work.</li> </ul> <p>Enviva requires all suppliers to sign an annual Master Wood Supply Agreement.</p> <p>Each of the identified biodiversity areas have attributes that could be affected by forest management activities</p> <p>Cape Fear Arch – Contains areas such as pocosins and Carolina bays that can be affected by improper timber harvesting techniques such as changes in hydraulic functions, conversion of native pine to planted pine, conversion to agriculture, quarrying, urban development, improper removal of pine straw, etc. Conversion of these sites to other uses occurred primarily the early 20<sup>th</sup> century and those that remain are indeed special. Enviva’s Track &amp; Trace Program, HCV Tract Approval Process and District of Origin Process ensure Enviva can identify these at-risk areas and avoid sourcing from them if the forest activity will have a negative impact on the forest site.</p> <p>Native Longleaf Pine Systems – Once covering an estimated 36.4 million hectares native longleaf pine stands was once the most ecologically important tree species in the southern US. The species now covers only 5% of its original space. Because of its reduced area it is considered one of the rarest systems in the world containing a high plant and animal diversity. These are fire depended forest that, in a natural, have little to no mid-canopy with a grass covered floor. Threats include conversion to other pine species, conversion to agriculture and fire suppression. There are ongoing efforts to re-establish the species and Enviva actively works with others interested in re-establishing the species in areas where it once thrived. Forest residue removal of low grade competing tree species from within these stands creates the desired habitat without the use of fire. Enviva purchases this low-grade wood to make pellets allowing owners of longleaf pine stands to properly manage them. Enviva’s Track &amp; Trace Program, HCV Tract Approval Process and District of Origin Process ensure Enviva can identify these at-risk areas and avoid sourcing from them if the forest activity will have a negative impact on the forest site.</p> <p>Lat Successional Bottomland Hardwoods – These floodplain forests are periodically inundated or contain saturated soils. Hydrology is key to their survival and changes in hydrology can affect their ability to thrive. Forest management activities are not necessarily the threat to these systems, but improper forest management activity can be. Improper treatment of hydrology concerns and poorly planned harvesting techniques are generally the concern. Enviva’s Track &amp; Trace Program, HCV Tract Approval Process and District of Origin Process ensure Enviva can identify these at-risk areas and avoid sourcing from them if the forest activity will have a negative impact on the forest site.</p> <p>Primary Feedstock          Enviva uses its proprietary Track &amp; Trace for all primary wood purchases. Specifically, Enviva maintains a robust tracking and monitoring program to ensure that all our suppliers deliver wood that is sourced according to our expectations. The information Enviva collects for every tract its suppliers harvest includes; data on the forest type, age, GPS</p>
----------------	--

	<p>coordinates, acreage, and the percent of volume from that tract being sold to Enviva. Before agreeing to accept material from a certain tract, Enviva’s Procurement Foresters must obtain this tract-level data and enter it into our database, which generates a unique tract ID. Then, upon delivery to the mill, each load is linked to that tract’s ID number. As a result, Enviva knows the tract-level attributes for all the primary wood entering the mill. Enviva uses random field audits to confirm the information provided is accurate.</p> <p>Enviva's HCV Tract Approval Process ensures forest management activities do not harm sensitive eco-systems, habitats or threaten biodiversity in its sourcing practices. Each tract is assessed using a set of criteria that include the tract location within known bottomland forest settings. Every tract is evaluated for forest health concerns, wildlife considerations, location within the landscape, conservation value and other criteria. Enviva will only purchase wood from a tract if the assessment determines harvesting is the best outcome for the forest.</p> <p><b>Secondary Feedstock</b>          Enviva's Secondary Supplier District of Origin procedure requires suppliers to annually provide information such as; their supply area radius, species used, information collected about source locations and forest worker training. This information is mapped against known areas with potential high conservation value to ensure that any risk to HCV values associated with suppliers of secondary feedstocks is appropriately included in the SBP supply base evaluation process and that the suppliers’ sourcing practices do not pose a threat to these areas.</p> <p>Enviva's annual District of Origin and Supplier Data Request Form process allows it to assess secondary feedstock mills as described in SBP's Normative Interpretations Document. The guidance found in Standard 2 Section 8.4 describes the procedures a Biomass Producer may use to ensure secondary feedstock sources can be proven SBP-compliant. The evidence collected and evaluated by Enviva to determine the risk of a supplier sourcing practices and supply area are low risk for all indicators.</p> <p>This approach is in alignment with SBP Guidance Document: Meeting SBP Criteria in relation to protecting exceptional conservation values in the southern US. The process Enviva employ’s through its District of Origin Process and annual Supplier Data Request process ensures Enviva can meet and exceed the guidance provided in the document therefore providing conformance to indicators 2.1.1 and 2.1.2 and confirming low risk.</p> <p>The approach also aligns with SBP Guidance Document: Assessment of Risk, Means of Verification and Mitigation Measures in the Southeast US describing the where mitigation measures are assessed;          Enviva’s Sustainability Policy, Responsible Wood Supply Program publicly describes Enviva’s commitment to avoid wood harvested from forests where high conservation values are threatened by management activities.</p> <p>ENV-SFI-01 SFI Certified Sourcing Implementation Manual describes processes and internal documents Enviva uses to meet the SFI requirements related to Objective 1 “Biodiversity in Fiber Sourcing. To address the practice of sustainable forestry by conserving biological diversity”. Further, as part of our Responsible Sourcing Policy, we solicit and receive detailed feedback on our current policies and suggestions for how to improve it from the following non-profit and agencies:</p> <ul style="list-style-type: none"> <li>• The Association of Fish and Wildlife Agencies and The National Wildlife Federation</li> <li>• The Nature Conservancy</li> <li>• Audubon</li> <li>• World Wildlife Fund</li> </ul>
--	---

	<ul style="list-style-type: none"> <li>• National Council for Air and Stream Improvement</li> <li>• The Conservation Fund</li> <li>• The Forest Trust</li> </ul> <p>The PEFC Chain of Custody Standard requires the certificate holder to ensure it knows where feedstocks originate and ensure sourcing practices avoid areas of high conservation value. ENV-PEFCCOC-01 PEFC Chain of Custody and ENV-COC-02 Controlled Sourcing Procedure are Enviva documents describing the work flow to ensure feedstock are legally sourced.</p> <p>Enviva's Controlled Sources Risk Assessment is reviewed annually to ensure Enviva is aware of changes in the supply base area. The analysis includes the identification of the potential threats forest management may pose to high conservation value areas. Enviva will only purchase feedstocks from suppliers who it has an established business relationship and a signed agreement. The Master Wood Purchase Agreement has among its many recitals requirements for feedstock supplier to ensure legality of ownership. This is evaluated as part of periodic supplier audits.</p> <p>Master Wood Purchase Agreements contain recital requiring the supplier to agree to abide by Enviva's legal and sustainability commitments including a provision to allow Enviva to periodically audit suppliers to ensure conformance.</p> <p><u>Conclusion</u> 2.1.2 is closely related to 2.1.1 and the Biomass Producers ability to identify and map areas of forest and other high conservation values the ability to develop methods to assess the potential impact of forest management activities. This indicator has a presumed specified risk</p>

	Indicator
<b>2.1.3</b>	The Biomass Producer has implemented appropriate control systems and procedures for verifying that feedstock is not sourced from forests converted to production plantation forest or non-forest lands after January 2008.
Finding	<p>Enviva uses contractual language in its Master Wood Purchase Agreement requiring supplier to abide by all relevant laws and regulations. The contract includes the requirement to avoid the following unacceptable sources wood:</p> <ul style="list-style-type: none"> <li>- Illegally harvest wood;</li> <li>- Wood harvested in violation of traditional and civil rights;</li> <li>- Wood harvested from forests where high conservation values are threatened by management activities;</li> <li>- Wood harvested from old growth or semi-natural forests being converted to plantations or non-forest use;</li> <li>- Wood from forests where genetically modified trees are planted;</li> <li>- Wood in which there was a violation of the ILO Declarations on fundamental principle and rights at work.</li> </ul> <p>Enviva requires all suppliers to sign an annual Master Wood Supply Agreement.</p> <p>Enviva's Controlled Sources Risk Assessment is reviewed annually. The analysis includes a review of land use change trends in the supply area.</p> <p>FSC US CWNRA finds, "Evidence indicates that forestland is growing in the North Central, Northeastern, and Rocky Mountain portions of the United States, while the Southeast and Pacific Coast regions are experiencing forest loss and concurrent rapid population growth.</p> <p>Within the Southeastern United States, the highest rates of urbanization are occurring in the Piedmont region from northern Georgia through North Carolina into Virginia. Forest loss is also occurring along the Atlantic Coast and in eastern Texas. Despite the high rates of urban growth and development across the Southeast, this growth is not consistent across the region."</p> <p>In summary the authors found, "Rates of urban development vary throughout the United States with higher rates in the Pacific Coast Region and portions of the Southeast Region. These two regions are also the regions identified as experiencing more recent forestland loss. Therefore, the greatest risk of materials entering the supply chain from conversions will most likely be in these two regions; however, the risk is not consistent across the regions.</p> <p>SFI Fiber Sourcing Standard requires a certificate holder to use written contracts with suppliers. Though conversion is not addressed in the SFI Fiber Sourcing Standard the requirement for a contract does permit the certificate holder to include other requirements in the document. ENV-SFI-01 SFI Certified Sourcing Implementation Manual describes processes and internal documents Enviva uses to meet the requirement</p> <p>The PEFC Chain of Custody Standard requires the certificate holder to ensure it knows where feedstocks originate and ensure wood does not originate from controversial sources. The definition of conversion sources is not as stringent as SBP's relying only on legality compliance. ENV-PEFCCOC-01 PEFC Chain of Custody and ENV-COC-02</p>

	<p>Controlled Sourcing Procedure are Enviva documents describing the work flow to ensure feedstock are legally sourced.</p> <p>ENV-COC-03 Controlled Sources Risk Assessment contains the work done to determine if illegal logging and timber theft are a risk in the supply area. This document uses many of the same sources as the FSC US CWNRA. Though valuable work and useful in demonstrating low risk, FSC does allow for wood to originate from conversion sources in some cases. The SBP requirement is more stringent and does not allow wood from any conversion sources.</p> <p>Enviva will only purchase feedstocks from suppliers who it has an established business relationship and a signed agreement. The Master Wood Purchase Agreement has among its many recitals requirements for feedstock supplier to ensure legality of ownership. This is evaluated as part of periodic supplier audits.</p> <p><b>Primary Feedstock</b></p> <p>Enviva uses its proprietary Track &amp; Trace for all primary wood purchases. Specifically, Enviva maintains a robust tracking and monitoring program to ensure that all our suppliers deliver wood that is sourced according to our expectations. The information Enviva collects for every tract its suppliers harvest includes; data on the forest type, age, GPS coordinates, acreage, and the percent of volume from that tract being sold to Enviva. Before agreeing to accept material from a certain tract, Enviva's Procurement Foresters must obtain this tract-level data and enter it into our database, which generates a unique tract ID. Then, upon delivery to the mill, each load is linked to that tract's ID number. As a result, Enviva knows the tract-level attributes for all the primary wood entering the mill. Enviva conducts random field audits to ensure the information provided is accurate and conversion of the site did not occur.</p> <p><b>Secondary Feedstock</b></p> <p>Enviva's Secondary Supplier District of Origin procedure requires suppliers to annually provide information such as; their supply area radius, species used, information collected about source locations and forest worker training. This information is mapped against known areas with potential high conservation value to ensure that any risk to HCV values associated with suppliers of secondary feedstocks is appropriately included in the SBP supply base evaluation process and that the suppliers' sourcing practices do not pose a threat to these areas.</p> <p>Enviva's annual District of Origin and Supplier Data Request Form process allows it to assess secondary feedstock mills as described in SBP's Normative Interpretations Document. The guidance found in Standard 2 Section 8.4 describes the procedures a Biomass Producer may use to ensure secondary feedstock sources can be proven SBP-compliant. The evidence collected and evaluated by Enviva to determine the risk of a supplier sourcing practices and supply area are low risk for all indicators.</p> <p>Master Wood Purchase Agreements contain recital requiring the supplier to agree to abide by Enviva's legal and sustainability commitments including a provision to allow Enviva to periodically audit suppliers to ensure conformance.</p> <p>Further, as part of our Responsible Sourcing Policy, we solicit and receive detailed feedback on our current policies and suggestions for how to improve it from the following non-profit and agencies:</p> <ul style="list-style-type: none"> <li>• The Association of Fish and Wildlife Agencies and The National Wildlife Federation</li> <li>• The Nature Conservancy</li> <li>• Audubon</li> <li>• World Wildlife Fund</li> <li>• National Council for Air and Stream Improvement</li> <li>• The Conservation Fund</li> <li>• The Forest Trust</li> <li>• And others</li> </ul>
--	--

	<p>Enviva does not source from production plantations as defined in the SBP Glossary as "forests of exotic species that have been planted or seeded by human intervention and that are under intensive stand management, are fast growing and subject to short rotations (e.g. Poplar, Acacia or Eucalyptus plantations)."</p> <p><u>Conclusion</u> The FSC US CWNRA has identified 8 counties with the supply base area as being at risk for conversion. The FSC US CWNRA only determined a conversion risk based on urbanization finding forest loss in other counties to be a low risk. SBP definition of conversion is much more stringent and includes conversion to anything other than forest not just urbanization. There is a specified risk associated with forest conversion in the supply area.</p>
Means of Verification	<ul style="list-style-type: none"> <li>a. Preamble citations</li> <li>b. 	Indicator
2.2.1	The Biomass Producer has implemented appropriate control systems and procedures to verify that feedstock is sourced from forests where there is appropriate assessment of impacts, and planning, implementation and monitoring to minimise them.
Finding	<p>Enviva uses contractual language in its Master Wood Purchase Agreement requiring supplier to abide by all relevant laws and regulations. The contract includes the requirement to avoid the following unacceptable sources wood:</p> <ul style="list-style-type: none"> <li>- Illegally harvest wood;</li> <li>- Wood harvested in violation of traditional and civil rights;</li> <li>- Wood harvested from forests where high conservation values are threatened by management activities;</li> <li>- Wood harvested from old growth or semi-natural forests being converted to plantations or non-forest use;</li> <li>- Wood from forests were genetically modified trees are planted;</li> <li>- Wood in which there was a violation of the ILO Declarations on fundamental principle and rights at work.</li> <li>-</li> </ul>

	<p>The annual Master Wood Purchase Agreement contains a clause requiring suppliers to use and require the use of forestry best management practices in their sourcing efforts.</p> <p>The FSC US CWNRA across 4 landownership scenarios and determined there are appropriate assessments, planning, implementation and monitoring to determine a low risk rating for this indicator</p> <p>1.1 Land tenure and management rights – “In its report to the Montreal Process Working Group on the Conservation and Management of Temperate and Boreal Forests, in scoring an indicator relating to land tenure, the US government concluded that, “All forest land owners, public and private, exercise their forest tenure rights to achieve their forest land management goals .... [A]lthough complex, clear title is usually sufficient [to allow forest management] in the United States.”</p> <p>1.3 Management and harvesting planning – Planning requirements for private lands are limited. The author has not been able to find indications of regular violations of these requirements.</p> <p>1.8 Timber harvesting and regulations – The US has ample regulation of the timber industry that varies by state but finds there is a low risk these rules and laws are not followed</p> <p>ENV-COC-03 Controlled Source Risk Assessment is reviewed annually to ensure Enviva is aware of forest impact assessments, planning implementation and monitoring efforts in all of Enviva's supply areas. Enviva reviews sources such as the National Association of State Foresters, USFS Forest Inventory Analysis, World Wildlife Fund, Conservation International, Greenpeace and World Resources Institute to conduct a state by state study of its supply area. The analysis indicates there are ample state and regional forest assessment tools that help determine forestry regulations within the supply base area. Many of these are the same sources of information used by FSC in its FSC US CWNRA. Findings are incorporated into Enviva's ENV-COC-03 Controlled Sources Risk Assessment and revisions to the Master Wood Purchase Agreement</p> <p>SFI Fiber Sourcing Standard Objective 7 requires a certificate holder to be “knowledgeable about credible regional conservation planning and priority-setting efforts that include a broad range of stakeholders and have a program to take into account the results of these efforts in planning.” Enviva does this through engaging state forestry associations.</p> <p>Enviva will only purchase feedstocks from suppliers who it has an established business relationship and a signed agreement. The Master Wood Purchase Agreement has among its many recitals requirements for feedstock supplier to ensure legality of ownership. This is evaluated as part of periodic supplier audits.</p> <p>Master Wood Purchase Agreements contain recital requiring the supplier to agree to abide by Enviva's legal and sustainability commitments including a provision to allow Enviva to periodically audit suppliers to ensure conformance.</p> <p>All of the states in Enviva's supply base area offer reforestation incentive programs and the success of these programs as well as BMP compliance information for most states can be found on the National Association of State Foresters website in the form of fact sheets and reports. All of the states have forestry BMP's guidelines, and Enviva contractually requires its suppliers to require the use of forestry BMP's.</p> <p>The FSC US CWNRA cited the Seneca Creek Associates, LLC report entitled, <i>Assessment of Lawful Harvesting &amp; Sustainability of US Hardwood Exports</i>, "States in the hardwood-producing region have very complex and diverse legal authorities over various aspects of forests and each state has crafted its own approach to fostering sustainable forest management."</p>
--	---

	<p>"Many states have implemented voluntary or incentive-based programs to achieve sustainable forestry objectives. Only sporadic information can be found in the formal literature or in media reporting about violations or potential violations of state regulations in the hardwood-producing states. Information that is readily available suggests that state regulatory agencies are not timid about issuing citations or pursuing violators."</p> <p>"While states in the hardwood-producing region take different approaches to regulating harvesting and forest practices, the data suggest that all states direct significant resources to forest sustainability issues. The extent of regulation in a given state is not necessarily an indication of how well forests are managed, but it does relate to legal compliance with state laws and thus the legality of hardwood production. The available data suggest that states in the hardwood region are diligent about enforcing regulations that affect forest practices."</p> <p>The Threatened and Endangered Species Act is vigorously enforced in the United States and effective: this conclusion is supported by Martin et al. (2005), in the peer-reviewed publication entitled "The Effectiveness of the Endangered Species Act: A Quantitative Analysis" (BioScience (2005), Vol. 55 Is. 4(1): 360-367.)</p> <p>Forestry Best Management Practices may not be an all-inclusive monitoring tool but they do provide some insight into timber harvesting and forest management techniques. The National Association of State Foresters website provides evidence of this and other forest assessment tools</p> <p>Master Wood Purchase Agreements contain recital requiring the supplier to agree to abide by Enviva's legal and sustainability commitments including a provision to allow Enviva to periodically audit suppliers to ensure conformance.</p> <p><b>Primary Feedstock</b>          Enviva uses its proprietary Track &amp; Trace for all primary wood purchases. Specifically, Enviva maintains a robust tracking and monitoring program to ensure that all our suppliers deliver wood that is sourced according to our expectations. The information Enviva collects for every tract its suppliers harvest includes; data on the forest type, age, GPS coordinates, acreage, and the percent of volume from that tract being sold to Enviva. Before agreeing to accept material from a certain tract, Enviva's Procurement Foresters must obtain this tract-level data and enter it into our database, which generates a unique tract ID. Then, upon delivery to the mill, each load is linked to that tract's ID number. As a result, Enviva knows the tract-level attributes for all the primary wood entering the mill. Enviva's Track &amp; Trace Program includes a harvest site auditing component to ensure suppliers conform to the requirement. The Forestry Commissions for each state in the supply area monitor and enforce BMP implementation.</p> <p>Enviva's HCV Tract Approval Process ensures forest management activities do not harm sensitive eco-systems, habitats or threaten biodiversity in its sourcing practices. Each tract is assessed using a set of criteria that include the tract location within known bottomland forest settings. Every tract is evaluated for forest health concerns, wildlife considerations, location within the landscape, conservation value and other criteria. Enviva will only purchase wood from a tract if the assessment determines harvesting is the best outcome for the forest.</p> <p><b>Secondary Feedstock</b>          Enviva's Secondary Supplier District of Origin procedure requires suppliers to annually provide information such as; their supply area radius, species used, information collected about source locations and forest worker training. This information is mapped against known areas with potential high conservation value to ensure that any risk to HCV values associated with suppliers of secondary feedstocks is appropriately included in the SBP supply base evaluation process and that the suppliers' sourcing practices do not pose a threat to these areas.</p>
--	--

	<p><u>Conclusion</u>  Enviva's feedstock is sourced from areas with forest impact assessments, planning implementation and monitoring. Based on the available information, the risk for this category has been assessed as low.</p>

	Indicator
2.2.3	The Biomass Producer has implemented appropriate control systems and procedures to ensure that key ecosystems and habitats are conserved or set aside in their natural state (CPET S8b).
Finding	<p>Enviva uses contractual language in its Master Wood Purchase Agreement requiring supplier to abide by all relevant laws and regulations. The contract includes the requirement to avoid the following unacceptable sources wood:</p> <ul style="list-style-type: none"> <li>- Illegally harvest wood;</li> <li>- Wood harvested in violation of traditional and civil rights;</li> <li>- Wood harvested from forests where high conservation values are threatened by management activities;</li> <li>- Wood harvested from old growth or semi-natural forests being converted to plantations or non-forest use;</li> <li>- Wood from forests were genetically modified trees are planted;</li> </ul>

	<ul style="list-style-type: none"> <li>- Wood in which there was a violation of the ILO Declarations on fundamental principle and rights at work.</li> </ul> <p>The Master Wood Purchase Agreement requires suppliers to avoid key ecosystems and habitats such as old growth forests and forest that could be threatened by forest management activities.</p> <p>The FSC US CWNRA finding related to this indicator</p> <p>1.9 Protected sites and species – “The US has a broad and comprehensive legal structure surrounding species protection and the protection of socially and ecologically important sites, administered at both the federal and state level.”</p> <p>Using the FSC US CWNRA Enviva has identified the following key ecosystems and habitats that are at risk.</p> <p>Native Longleaf Pine Systems – these forest systems are at risk in 23 counties across the southern portion of the Enviva supply area. Native longleaf systems threats vary across its natural range with suppression of fire being the greatest concern. Other concerns include conversion to other pine types and incompatible forest management practices.</p> <p>Late Successional Bottomland Hardwoods – found throughout the south in the floodplains of rivers and streams the forests are periodically flooded or saturated. Variations in structure are determined by the location of the late successional bottomland forest. Generally, 80 years or older the forest is better defined by structure; closed canopy, large wood debris, standing hollow trees and little ground vegetation. Bottomland forests in Mississippi are reduced in size and area from historic clearing to create agricultural fields. Changes in hydrology, improper forest management techniques and invasive species. Forest management in and of itself may not be a threat but how the management is applied can be counterproductive.</p> <p>Cape Fear Arch Critical Biodiversity Area – the geologic and hydrologic history of the Cape Fear Arch region have resulted in a diversity of wet and dry habitats. This diversity in addition to the sand and limestone deposits that have resulted in a very high diversity of natural communities and associated plant and animal species, particularly in pocosin and longleaf pine habitats. When the canopy has been completely removed through timber harvest, pocosins often do not regenerate.</p> <p>ENV-COC-03 Controlled Sources Risk Assessment is reviewed annually to ensure it Enviva is aware of forest impact assessments, planning implementation and monitoring efforts including an analysis of ecosystem and habitats all of Enviva's supply areas. The program requires and assessment of each risk rea to determine if forest management activities are impacting eco-regions of significant high conservation values. The document finds a low risk. Enviva reviews sources such as the National Association of State Foresters, USFS Forest Inventory Analysis, World Wildlife Fund, Conservation International, Greenpeace and World Resources Institute to conduct a state by state study of its supply area. The analysis indicates there are ample state and regional forest assessment tools that help determine forestry regulations within the supply base area. The analysis determine the wood products industry is well established, logger training is an industry norm and the use of forestry best management practices are a long standing business practice in the supply base area. These same sources were used by the author of the FSC US CWNRA</p> <p>Findings are incorporated into Enviva's ENV-COC-03 Controlled Sources Risk Assessment and revisions to the Master Wood Purchase Agreement. ENV-SFI-01 SFI Certified Sourcing Implementation Manual describes processes and internal documents Enviva uses to meet the SFI requirements related to Objective 1</p>

The FSC US CWNRA did not identify any at risk species in the Enviva supply area.

ENV-SFI-01 SFI Certified Sourcing Implementation Manual describes processes and internal documents Enviva uses to meet the SFI requirements related to Objective 1 “Biodiversity in Fiber Sourcing. To address the practice of sustainable forestry by conserving biological diversity”. Further, as part of our Responsible Sourcing Policy, we solicit and receive detailed feedback on our current policies and suggestions for how to improve it from the following non-profit and agencies:

- The Association of Fish and Wildlife Agencies and The National Wildlife Federation
- The Nature Conservancy
- Audubon
- World Wildlife Fund
- National Council for Air and Stream Improvement
- The Conservation Fund
- The Forest Trust

Master Wood Purchase Agreements contain recital requiring the supplier to agree to abide by Enviva’s legal and sustainability commitments including a provision to allow Enviva to periodically audit suppliers to ensure conformance.

**Primary Feedstock**

Enviva uses its proprietary Track & Trace for all primary wood purchases. Specifically, Enviva maintains a robust tracking and monitoring program to ensure that all our suppliers deliver wood that is sourced according to our expectations. The information Enviva collects for every tract its suppliers harvest includes; data on the forest type, age, GPS coordinates, acreage, and the percent of volume from that tract being sold to Enviva. Before agreeing to accept material from a certain tract, Enviva’s Procurement Foresters must obtain this tract-level data and enter it into our database, which generates a unique tract ID. Then, upon delivery to the mill, each load is linked to that tract’s ID number. As a result, Enviva knows the tract-level attributes for all the primary wood entering the mill.

Enviva's HCV Tract Approval Process ensures forest management activities do not harm sensitive eco-systems, habitats or threaten biodiversity in its sourcing practices. Each tract is assessed using a set of criteria that include the tract location within known bottomland forest settings. Every tract is evaluated for forest health concerns, wildlife considerations, location within the landscape, conservation value and other criteria. Enviva will only purchase wood from a tract if the assessment determines harvesting is the best outcome for the forest.

Forestry BMP's are the best tool available to ensure forest management activities do not adversely impact forests and other areas of high conservation value. Enviva contractually requires the use of BMP's. Enviva's Track & Trace Program includes a harvest site auditing component to ensure suppliers conform to the requirement. The Forestry Commissions for each of the states in the supply area monitor and enforce BMP implementation.

**Secondary Feedstock**

Enviva's Secondary Supplier District of Origin procedure requires suppliers to annually provide information such as; their supply area radius, species used, information collected about source locations and forest worker training. This information is mapped against known areas with potential high conservation value to ensure that any risk to HCV values associated with suppliers of secondary feedstocks is appropriately included in the SBP

	<p>supply base evaluation process and that the suppliers' sourcing practices do not pose a threat to these areas.</p> <p>Enviva's annual District of Origin and Supplier Data Request Form process allows it to assess secondary feedstock mills as described in SBP's Normative Interpretations Document dated August 2018. The guidance found in Standard 2 Section 8.4 describes the procedures a Biomass Producer may use to ensure secondary feedstock sources can be proven SBP-compliant. The evidence collected and evaluated by Enviva to determine the risk of a supplier sourcing practices and supply area are low risk for all indicators.</p> <p><u>Conclusion</u> According to SBP Guidance Document: Assessment of Risk, Means of Verification and Mitigation Measures in the Southeast US, "SBP has yet to receive a Regional Risk Assessment (RRA) for the US to evaluate for approval and considers all of the currently available assessment resources in and of themselves to be only partially adequate in assessing high conservation value and conversion indicators." Use of the FSC CWNRA is suggested but is considered incomplete.</p>

Forestry best management practices are the best tool to protect water quality.</p> <p>Enviva's ENV-COC-03 Controlled Sources Risk Assessment is reviewed annually to ensure Enviva is aware of forest impact assessments, planning implementation and monitoring efforts including forestry best management practices all of Enviva's supply areas. A review of BMP implementation rates is included.</p> <p>Enviva is a member of regional state forestry associations responsible for reviewing and developing logger training in conjunction with state forestry associations related to forestry best management practices. Enviva interacts with these groups to improve forestry best management practices guidelines and monitor enforcement.</p> <p>Enviva reviews sources such as the National Association of State Foresters, USFS Forest Inventory Analysis, World Wildlife Fund, Conservation International, Greenpeace and World Resources Institute to conduct a state by state study of its supply area. The analysis indicates there are ample state and regional forest assessment tools that help determine forestry regulations within the supply base area. The analysis determines the wood products industry is well established, logger training is an industry norm and the use of forestry best management practices are a long standing business practice in the supply base area.</p> <p>Findings are incorporated into Enviva's ENV-COC-03 Controlled Sources Risk Assessment and revisions to the Master Wood Purchase Agreement.</p> <p>The FSC US CWNRA indicator 3.4 HCV 4 determined there is a low risk of forest management activities. Further the author states, "Evidence of the effectiveness of forestry BMPs, combined with the reported levels of compliance, indicates that there is a high likelihood that HCV 4 are being effectively protected throughout the assessment area through the implementation of forestry BMPs associated with State nonpoint source pollution programs." The effectiveness of forestry best management practices is well documented in the FSC US CWNRA.</p> <p>SFI Fiber Sourcing Standard Objective 3 requires a certificate holder to promote the use of trained logger. ENV-SFI-01 SFI Certified Sourcing Implementation Manual describes processes and internal documents Enviva uses to meet the Objective</p> <p>The US Clean Water Act requires each state to develop non-point source BMP's to address run off. This includes forestry activities. Enviva's contracts require suppliers to ensure their supply chain follows all applicable laws including those that protect special habitats by following BMP's and other laws.</p> <p>Enviva's Controlled Wood Risk Assessment/ Due Diligence System and SFI Wood Sourcing Program requires monitoring and assessment of the impacts forestry has on water quality. Enviva works with state Sustainable Forestry Initiative Committees (SIC) to promote BMP compliance and education.</p> <p>Primary Feedstock</p>
--	---

	<p>Enviva uses its proprietary Track &amp; Trace for all primary wood purchases. Specifically, Enviva maintains a robust tracking and monitoring program to ensure that all our suppliers deliver wood that is sourced according to our expectations. The information Enviva collects for every tract its suppliers harvest includes; data on the forest type, age, GPS coordinates, acreage, and the percent of volume from that tract being sold to Enviva. Before agreeing to accept material from a certain tract, Enviva's Procurement Foresters must obtain this tract-level data and enter it into our database, which generates a unique tract ID. Then, upon delivery to the mill, each load is linked to that tract's ID number. As a result, Enviva knows the tract-level attributes for all the primary wood entering the mill.</p> <p>Enviva's HCV Tract Approval Process ensures forest management activities do not harm sensitive eco-systems, habitats or threaten biodiversity in its sourcing practices. Each tract is assessed using a set of criteria that include the tract location within known bottomland forest settings. Every tract is evaluated for forest health concerns, wildlife considerations, location within the landscape, conservation value and other criteria. Enviva will only purchase wood from a tract if the assessment determines harvesting is the best outcome for the forest.</p> <p>Forestry BMP's are the best tool available to ensure forest management activities do not adversely impact forests and other areas of high conservation value. Enviva contractually requires the use of BMP's. Enviva's Track &amp; Trace Program includes a harvest site auditing component to ensure suppliers conform to the requirement. The Forestry Commissions for each of the states in the supply area monitor and enforce BMP implementation.</p> <p><b>Secondary Feedstock</b>          Enviva's Secondary Supplier District of Origin procedure requires suppliers to annually provide information such as; their supply area radius, species used, information collected about source locations and forest worker training. This information is mapped against known areas with potential high conservation value to ensure that any risk to HCV values associated with suppliers of secondary feedstocks is appropriately included in the SBP supply base evaluation process and that the suppliers' sourcing practices do not pose a threat to these areas.</p> <p>Enviva's annual District of Origin and Supplier Data Request Form process allows it to assess secondary feedstock mills as described in SBP's Normative Interpretations Document dated August 2018. The guidance found in Standard 2 Section 8.4 describes the procedures a Biomass Producer may use to ensure secondary feedstock sources can be proven SBP-compliant. The evidence collected and evaluated by Enviva to determine the risk of a supplier sourcing practices and supply area are low risk for all indicators. Master Wood Purchase Agreements contain recital requiring the supplier to agree to abide by Enviva's legal and sustainability commitments including a provision to allow Enviva to periodically audit suppliers to ensure conformance. Master Wood Purchase Agreements contain recital requiring the supplier to agree to abide by Enviva's legal and sustainability commitments including a provision to allow Enviva to periodically audit suppliers to ensure conformance.</p> <p><u>Conclusion</u>          There is a low risk the Enviva's sourcing practices will have a negative impact on water quality.</p>

	Indicator
2.3.1	Analysis shows that feedstock harvesting does not exceed the long-term production capacity of the forest, avoids significant negative impacts on forest productivity and ensures long-term economic viability. Harvest levels are justified by inventory and growth data.

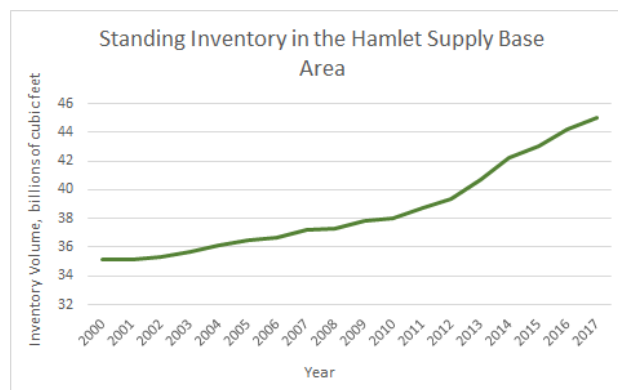

Finding

Enviva's Controlled Sources Risk Assessment is reviewed annually to ensure it Enviva is aware of forest impact assessments, planning implementation and monitoring efforts, forestry best management practices in all of Enviva's supply areas. The annual review requires an analysis of growth to drain in the supply area.

A 2015 Forest2Market report titled *Wood Supply Market Trends in the US South* concluded that in 2014, the total wood consumption for all markets in the south was only 3.3% of total forest inventory. Removals for pellet production represents 0.3% of all the US South standing inventory.

The annual growth to drain ratio of the supply base is 1.76:1 for all species, 2.29:1 for hardwood, and 1.56:1 for pine. A positive growth to drain ratio indicates that forest growth exceeds harvest removals. In the Gulf region of the U.S. South, total inventory has increased by an average of 1.2% annually between 2000 and 2017. Since 2000, US Forest Service Forest Inventory Analysis (FIA) data indicates an increase in forest area in the states covered included in the Enviva supply base area.

Enviva is just one of several industries and entities sourcing wood in its supply base area. Removals of both pine and hardwood for pellet production in the Southern region comprised only 7% of total harvest volume in 2018. Primary harvesting activity and wood consumption in the South is driven by saw-timber markets, with total removals for all wood industry sectors t only 2.0% (8.4 million tons) of the total estimated standing inventory of 418.4 million tons In 2017, pine pulpwood removals for the entire pellet industry accounted for 3.8% of total pine pulpwood removals for all wood product classifications.

The procurement of wood material contributes to reducing environmental impacts and enhancing the productivity of forests. A 2017 Forest2Market report, *Historic Perspectives on the Relationship between Demand and Forest Productivity in the US South*, concluded further that a positive relationship exists between forest harvest and forest growth, proving that forest landowners respond to robust forest products markets by planting more trees. Markets for low valued wood products allow for more efficient site preparation and reforestation.

	<p><u>Conclusion</u> There is a low risk Enviva's sourcing practices will harm growth to drain levels in the supply area.</p>

2.3.3	Analysis shows that feedstock harvesting and biomass production positively contribute to the local economy, including employment.
Finding	<p>The National Association of State Foresters website contains State-wide Assessments describing the contributions the timber industry has in each state contained in the Enviva supply base area. The forests of the Southeast provide a number of economic and societal benefits such as manufacturing, employment, recreation, aesthetics, and environmental protection. To ensure that the forests can meet the current and future economic, ecological, cultural, and recreational demands placed on them, State Foresters, Forest Managers and others must focus their efforts to address changing landowner objectives, parcelization and fragmentation, current and emerging markets, forest regulation, critical habitats, and cultural/recreational concerns.</p> <p>According to a recent internal study, Enviva will directly employ 79 people and its operation will generate up to 138 indirect jobs in the region are created by Enviva's operations. The same study found that Enviva has a total direct and indirect economic contribution to the region of over \$151.9 million dollars.</p> <p><u>Conclusion</u> Evidence demonstrates the economic benefits of Enviva's presence in the supply area.</p>

	Indicator
2.4.1	The Biomass Producer has implemented appropriate control systems and procedures for verifying that the health, vitality and other services provided by forest ecosystems are maintained or improved (CPET S7a).
Finding	<p>Enviva uses contractual language in its Master Wood Purchase Agreement requiring supplier to abide by all relevant laws and regulations. The contract includes the requirement to avoid the following unacceptable sources wood:</p> <ul style="list-style-type: none"> <li>- Illegally harvest wood;</li> <li>- Wood harvested in violation of traditional and civil rights;</li> <li>- Wood harvested from forests where high conservation values are threatened by management activities;</li> <li>- Wood harvested from old growth or semi-natural forests being converted to plantations or non-forest use;</li> <li>- Wood from forests where genetically modified trees are planted;</li> <li>- Wood in which there was a violation of the ILO Declarations on fundamental principle and rights at work.</li> </ul> <p>The Master Wood Purchase Agreement also requires suppliers to use and require the use of forestry best management practices in their sourcing efforts. Forestry best management practices are the best tool to protect forest health</p> <p>ENV-COC-03 Controlled Sources Risk Assessment is reviewed annually to ensure it Enviva is aware of forest impact assessments, planning implementation and monitoring</p>

	<p>efforts, forestry best management practices in all of Enviva's supply areas. The annual review requires a review of evidence to ensure harvesting practices do not harm forest health or vitality.</p> <p>Enviva reviews sources such as the National Association of State Foresters, USFS Forest Inventory Analysis, World Wildlife Fund, Conservation International, Greenpeace and World Resources Institute to conduct a state by state study of its supply area. The analysis indicates there are ample state and regional forest assessment tools that help determine forestry regulations within the supply base area. The analysis determines the wood products industry is well established, logger training is an industry norm and the use of forestry best management practices are a long standing business practice in the supply base area.</p> <p>Findings are incorporated into Enviva's ENV-COC-03 Controlled Sources Risk Assessment and revisions to the Master Wood Purchase Agreement. The US Forest Service and State Forest Services undertake research into forest health, and their research results are readily available. The SFI Wood Sourcing Program requires Program Participants to individually or with others participate in research related to forest health issues. Markets for residual by-products benefit sawmills which in turn benefits forest landowners and helps support reforestation.</p> <p>Enviva is also a member of the National Council on Air and Stream Improvement (NCASI). NCASI Technical Bulletin No. 982 and the 2014 update No. 1022 <i>Summary of Conservation Planning Efforts in Forested Regions of the United States: 2014 Update</i> describes conservation plans and initiatives states are undertaking to ensure forest health. The membership allows Enviva to stay informed of trends in forest health and interact with other in the wood products industry to develop useful research for the forest products sector.</p> <p>Enviva uses its proprietary Track &amp; Trace for all primary wood purchases. Specifically, Enviva maintains a robust tracking and monitoring program to ensure that all our suppliers deliver wood that is sourced according to our expectations. The information Enviva collects for every tract its suppliers harvest includes; data on the forest type, age, GPS coordinates, acreage, and the percent of volume from that tract being sold to Enviva. Before agreeing to accept material from a certain tract, Enviva's Procurement Foresters must obtain this tract-level data and enter it into our database, which generates a unique tract ID. Then, upon delivery to the mill, each load is linked to that tract's ID number. As a result, Enviva knows the tract-level attributes for all the primary wood entering the mill. Enviva's Track &amp; Trace Program includes a harvest site auditing component to ensure suppliers conform to the requirement.</p> <p>Enviva's HCV Tract Approval Process ensures forest management activities do not harm sensitive eco-systems, habitats or threaten biodiversity in its sourcing practices. Each tract is assessed using a set of criteria that include the tract location within known bottomland forest settings. Every tract is evaluated for forest health concerns, wildlife considerations, location within the landscape, conservation value and other criteria. Enviva will only purchase wood from a tract if the assessment determines harvesting is the best outcome for the forest.</p> <p><b>Secondary Feedstock</b>          Enviva's Secondary Supplier District of Origin procedure requires suppliers to annually provide information such as; their supply area radius, species used, information collected about source locations and forest worker training. This information is mapped against known areas with potential high conservation value to ensure that any risk to HCV values associated with suppliers of secondary feedstocks is appropriately included in the SBP supply base evaluation process and that the suppliers' sourcing practices do not pose a threat to these areas.</p>
--	--

	<p>Enviva's annual District of Origin and Supplier Data Request Form process allows it to assess secondary feedstock mills as described in SBP's Normative Interpretations Document dated August 2018. The guidance found in Standard 2 Section 8.4 describes the procedures a Biomass Producer may use to ensure secondary feedstock sources can be proven SBP-compliant. The evidence collected and evaluated by Enviva to determine the risk of a supplier sourcing practices and supply area are low risk for all indicators.</p> <p>Master Wood Purchase Agreements contain recital requiring the supplier to agree to abide by Enviva's legal and sustainability commitments including a provision to allow Enviva to periodically audit suppliers to ensure conformance.</p> <p><u>Conclusion</u>          Enviva's control systems described above are designed to ensure sourcing practices do not have a negative impact on forest health and vitality and other services provided by forest ecosystems. These systems produce auditable results in the form of records and on the ground practices.</p>

<b>2.7.1</b>	The Biomass Producer has implemented appropriate control systems and procedures for verifying that Freedom of Association and the effective recognition of the right to collective bargaining are respected.
Finding	<p>Enviva uses contractual language in its Master Wood Purchase Agreement requiring supplier to abide by all relevant laws and regulations. The contract includes the requirement to avoid the following unacceptable sources wood:</p> <ul style="list-style-type: none"> <li>- Illegally harvest wood;</li> <li>- Wood harvested in violation of traditional and civil rights;</li> <li>- Wood harvested from forests where high conservation values are threatened by management activities;</li> <li>- Wood harvested from old growth or semi-natural forests being converted to plantations or non-forest use;</li> <li>- Wood from forests where genetically modified trees are planted;</li> <li>- <i>Wood in which there was a violation of the ILO Declarations on fundamental principle and rights at work.</i></li> </ul> <p>The Master Wood Purchase Agreement are signed by each supplier annually.</p> <p>Enviva's ENV-COC-03 Controlled Sources Risk Assessment is reviewed annually. The analysis includes a review of appropriate laws regarding freedom of workers right to associate.</p> <p>Findings are incorporated into Enviva's ENV-COC-03 Controlled Sources Risk Assessment and revisions to the Master Wood Purchase Agreement.</p> <p>The FSC US CWNRA determined Indicator 2.2. Labour rights are respected including rights as specified in ILO Fundamental Principles and Rights at work.</p> <p><i>“Freedom of Association &amp; Collective Bargaining</i> Even though the US has not ratified either of the associated Core Conventions, it has been a member of the ILO since 1980 (and previous to that was a member from 1934 to 1977). As a member, the US has obligations under the ILO Constitution, including a commitment under the Declaration on Fundamental Principles and Rights at Work. Additionally, the US is subject to annual ILO review and reporting processes and also complaint processes (through the Committee on Freedom of Association, CFA). A report by the International Organisation of Employers (IOE) notes that “Most CFA case examinations of U.S. law have resulted in conclusions and recommendations that the law or practice subject of the complaint is consistent with the principles of freedom of association” and that “there has never been a wholesale criticism of the NLRA or NLRB by the CFA or the ILO”. There are 42 closed complaints cases listed in the US member</p>

	<p>profile. All of this provides strong evidence that the United States respects, promotes and realizes, in good faith, workers’ rights to “freedom of association and the effective recognition of the right to collective bargaining.”</p> <p>Additionally, “It is possible to conclude from the information presented that while the US has not ratified and may not conform with all specifics in the associated Core Conventions, it respects the fundamental rights of freedom of association and the effective recognition of the right to collective bargaining.”</p> <p>In the United States federal law and acts designed to provide minimum guidance to states in developing state specific laws and regulations. The nation ranks in the top 88th percentile in Regulatory Quality in the World Bank, Worldwide Governance Indicators and in the top 90th percentile in Rule of Law.</p> <p>U.S. law clearly specifies rights to collective bargaining and freedom of association. Enviva’s HR practices ensure worker rights are protected. All contracts contain verbiage requiring suppliers to conform to all applicable laws and annually Enviva sends supplier correspondence requiring its suppliers to comply with all labor laws. The United States ratified ILO C150 – Labor Administration Convention securing the rights of worker organization and collective bargaining. Verification of this and other ILO US Ratified Conventions can be found on the ILO NORMLEX website</p> <p>Enviva posts all of the US required employee information posters in key locations for all employees to see and read. Enviva's employee handbook describes the rights each worker enjoys including the right of free association and collective bargaining.</p> <p>The United States Department of Labor provides verification of enforcement. (<a href="https://www.dol.gov/general/aboutdol/majorlaws">https://www.dol.gov/general/aboutdol/majorlaws</a>)</p> <p>Master Wood Purchase Agreements contain recital requiring the supplier to agree to abide by Enviva’s legal and sustainability commitments including a provision to allow Enviva to periodically audit suppliers to ensure conformance.</p> <p><u>Conclusion</u> Analysis of Enviva's sourcing practices confirms the existence of appropriate laws and regulations governing workers right to associate.</p>

	Indicator
2.9.1	Biomass is not sourced from areas that had high carbon stocks in January 2008 and no longer have those high carbon stocks.
Finding	<p>Enviva's ENV-COC-03 Controlled Sources Risk Assessment is reviewed annually to ensure it Enviva is aware of forest impact assessments, planning implementation and monitoring efforts, forestry best management practices in all of Enviva's supply areas. The analysis includes a study of carbon stocks in the supply area.</p> <p>Wetlands and peatlands are recognized as areas of high carbon stocks as well as areas of important ecological function. Where there are wetlands in the sourcing area, these are strongly protected by legislation to remain as wetlands through the Clean Water Act. No change can be made to the hydrology of wetlands without the permission of the Army Corps of Engineers, who oversee and implement CWA legislation.</p>

	<p>The annual growth to drain ratio of the supply base is 1.76:1 for all species, 2.29:1 for hardwood, and 1.56:1 for pine. A positive growth to drain ratio indicates that forest growth exceeds harvest removals. In the Gulf region of the U.S. South, total inventory has increased by an average of 1.3% annually between 2000 and 2018. Since 2000, US Forest Service Forest Inventory Analysis (FIA) data indicates an increase in forest area in the states covered included in the Enviva supply base area.</p> <p>Wetlands and peatlands are recognized as areas of high carbon stocks as well as areas of important ecological function. Wetlands such as swamps, ponds and bottoms are common within the supply base, but peatlands such as bogs and fens are usually associated with the Northeast United States and well outside of the supply base. The exception to this is Pocosin, which is the only Southeastern bog and is only found along the Atlantic coast from Virginia to Florida and not likely to occur within the supply base.</p> <p><a href="http://water.epa.gov/type/wetlands/types_index.cfm">http://water.epa.gov/type/wetlands/types_index.cfm</a></p> <p>While current BMP's are structured to allow selective harvesting within a wetland, guidelines are in place to protect wetland function and minimize site impacts during harvest. BMP's specifically do not allow forestry activities to alter the hydrologic conditions or drainage patterns of wetlands. By limiting harvest size and requiring leave trees and Streamside Management Zones within the wetland, BMP's work to maintain the carbon sink values associated with wetlands. The use of innovative harvesting techniques such as mat or shovel logging utilize concentrated skid trails and "mats" of felled wood to minimize ground disturbance during wetland harvest. It is common practice for logging slash to be left on site during wetland harvest and natural regeneration of the wetland takes place fairly quickly after harvest.</p> <p><u>Conclusion</u> Analysis of Enviva's supply area confirms carbon stocks are maintained.</p>

2.9.2	Analysis demonstrates that feedstock harvesting does not diminish the capability of the forest to act as an effective sink or store of carbon over the long term.
Finding	<p>Enviva's Controlled Sources Risk Assessment is reviewed annually to ensure it Enviva is aware of forest impact assessments, planning implementation and monitoring efforts, forestry best management practices in all of Enviva's supply areas. The analysis includes a study of carbon stocks in the supply area.</p> <p>Forest cover type in the Enviva SBP-compliant supply base area is 64% hardwood. The 36% pine portion is a combination of both naturally occurring and plantation pine. Growth to drain is positive 1.73:1 for all species, 1.86:1 for pine species and 1.59:1 for hardwood species.</p>

Understanding the role of managed forests in forest-carbon relationships is an essential component of global carbon dynamics and greenhouse gas (GHG) reductions. The ability of forests to act as carbon storage pools (sinks) and prevent additional carbon from entering the atmosphere is a key factor in this relationship. Recent studies have shown that a “hands off” strategy of forest preservation may not always produce the desired climatic results, but sustainably managed forests can provide carbon sequestration and storage benefits as well as a range of environmental and social benefits such as timber and biomass production, clean water, wildlife habitat, and recreational opportunities. The UN Intergovernmental Panel on Climate Change (IPCC) acknowledged this in their Fourth Assessment Report: “In the long term, a sustainable forest management strategy aimed at maintaining or increasing forest carbon stocks, while producing an annual sustained yield of timber, fiber or energy from the forest, will generate the largest sustained mitigation benefit.”

Healthy and vigorously growing forests are efficient at capturing and storing atmospheric carbon, but older mature forests, while maintaining large carbon stores, have very low rates of additional carbon sequestration. If natural mortality is allowed to occur in these mature forests, they can actually become carbon emitters and lose the benefit of stored carbon. The harvest of forest resources from such stands provides a mechanism for capturing and utilizing stored carbon. Sustainable forest management practiced at the landscape level provides a mosaic of forest stands from young to old and maintains carbon sequestration potential of the forests. Mature stands are harvested and reforested while younger stands are managed to maintain vigor and held for future harvest. Forest management practices such as thinning and prescribed burning reduce the potential for stand mortality from natural disturbances and the carbon emissions associated with such disturbances. The decay of trees destroyed by wildfires, storms, insects and diseases emits stored carbon back into the atmosphere without any realized benefit. As long as harvests and mortality do not exceed net growth across the forest, carbon stocks will remain stable or increase through time. In the U.S. we have experienced over 70 continuous years of net forest growth exceeding removals and mortality, thus indicating forest management practices are having a positive impact on the long-term storage of carbon. Forest Inventory Analysis (FIA) data shows that all states within the Enviva supply base follow the U.S. trend of steady to increasing forested acres.

Harvest and utilization of forest products have additional GHG reduction and carbon flow benefits beyond the forest that are often not realized in society. The premise of Enviva’s operations is to utilize forest materials and residuals from wood processing facilities in order to produce renewable energy and lower GHG emissions. By accepting lower quality wood produced from forest thinnings, Enviva is promoting the sustainable forest management practices that are essential to forest-climate interactions. Energy obtained from forest biomass uses far less of the Earth’s stored carbon; therefore, the use of our wood pellets reduces the flow of fossil fuel-based carbon emissions into the atmosphere. Solid wood products and wood-based products used in construction, furniture, and other industries maintain their stored carbon for the life of the product. The reuse or recycling of these wood products only compounds their impact on carbon flow. It takes less energy (embodied energy) and thus less fossil fuel to process raw forest materials into useful products than it does for other materials such as steel, aluminum, concrete, or plastic. When wood products are used in place of these other materials, there exist a real substitution effect that serves to reduce overall societal carbon emissions.

Sustainable forest management along with the additive effect of various wood use strategies, insure that forest operations have substantial carbon sequestration, storage, and substitution benefits that reduce global GHG emissions.

	Indicator
2.10.1	Genetically modified trees are not used.
Finding	<p>Enviva uses contractual language in its Master Wood Purchase Agreement requiring supplier to abide by all relevant laws and regulations. The contract includes the requirement to avoid the following unacceptable sources wood:</p> <ul style="list-style-type: none"> <li>- Illegally harvest wood;</li> <li>- Wood harvested in violation of traditional and civil rights;</li> <li>- Wood harvested from forests where high conservation values are threatened by management activities;</li> <li>- Wood harvested from old growth or semi-natural forests being converted to plantations or non-forest use;</li> <li>- <i>Wood from forests were genetically modified trees are planted;</i></li> <li>- Wood in which there was a violation of the ILO Declarations on fundamental principle and rights at work.</li> </ul> <p>The Master Wood Purchase Agreement are signed by each supplier annually.</p> <p>Enviva's ENV-COC-03 Controlled Sources Risk Assessment is reviewed annually. The analysis includes confirmation there are no commercially available genetically modified trees in the US..</p> <p>Findings are incorporated into Enviva's ENV-COC-03 Controlled Sources Risk Assessment and revisions to the Master Wood Purchase Agreement.</p> <p>The FSC US CWNRA findings conclude          “Currently there is no use of GMO trees for commercial use, but the US might be close to approving the use of such. If this happens it will not be possible to identify the use of that GMO to a certain MU, which is why there might be specified risk in the future. But as the situation is now in the US there are no commercial GMO timber trees.</p> <p>There are no commercial uses of Genetically Modified Organisms (GMO's) inside the Enviva LP supply area. Enviva communicates its desire to avoid these source annually to its suppliers. Excerpt from Enviva's PEFC Chain of Custody Due Diligence System:</p> <p>International groups have general consistency regarding the term GMO to ensure that it is not confused with hybrids, cultivars, and breeds, which are derived from traditional breeding programs. A GMO is an organism that has been transformed by the insertion of one or more genes (called transgenes). Often the inserted genes are from a different species than the recipient organism. Genetic modification does not include traditional breeding or natural hybridization, i.e. GM trees cannot be obtained through conventional tree breeding methods.</p> <p>There is a single synthesis document that provides an up to date (as of 2004) evaluation of forest GMO (Genetically Modified Organisms). Currently, the only commercial user of GMO trees is China and only a single species, <i>Populus nigra</i> (Black Poplar, Lombardy Poplar).</p> <p>The majority of GMO tree research takes place in the U.S. As of 2004, there were field trials of multiple genera, but no commercial plantings.</p> <p>Enviva did not find its wood supply areas on any lists contained in the FAO preliminary review of biotechnology in forestry (<a href="http://www.fao.org/docrep/008/ae574e/ae574e00.htm">http://www.fao.org/docrep/008/ae574e/ae574e00.htm</a>).</p>

	<p>There are no commercial uses of genetically modified trees taking place across the wood supply area. Enviva is therefore confident that its wood supply does not source wood from forests in which genetically modified trees are planted.</p> <p>Master Wood Purchase Agreements contain recital requiring the supplier to agree to abide by Enviva’s legal and sustainability commitments including a provision to allow Enviva to periodically audit suppliers to ensure conformance.</p> <p><u>Conclusion</u> Enviva does not use genetically modified trees at any of its mills.</p>
