## Why choose us?

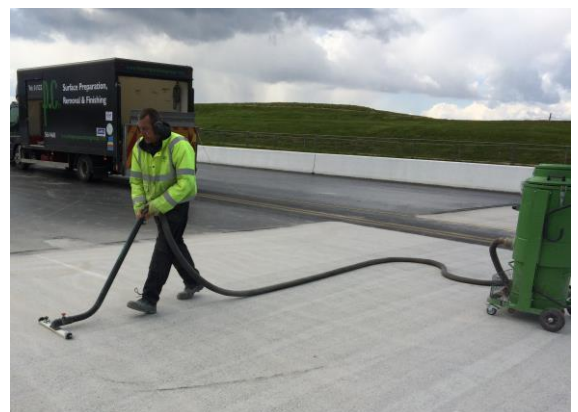

The Preparation Group's Industrial Vacuums are highly efficient, with powerful suction for optimum dust control when using equipment & tools or for heavy duty stand alone vacuuming tasks. Two years warranty is included for confidence in performance.

Constructed from high grade steel, they are built to last & virtually maintenance free.

Offering exceptional filtration levels, all models are fitted with 'M' class rated filters as standard, with 'H' filters available from stock for specialist or hazardous applications such as dealing with asbestos.

Our range of vacuums have different features including; energy saving motors, dustop filter cleaning, dry/wet use & longopac® safe bagging systems, providing every solution for effective, controlled dust/debris extraction & containment.

## Our difference

### 1. Energy saving features

**202DS & M450** - the individual motors can be switched on or off independently to conserve energy for light use.

### 2. Super efficient 'Dustop' filter cleaning system

**101DS & 202DS** – for extended filter life & performance. The vacuums' own suction capacity also cleans the filter.

### 3. Dry/Wet models with no clogging of filter

**M450 & TS750PN** – switch between dust & liquids with no compromise to the performance. No need to change the filter.

### 4. Longopac® options that deal with hazardous material

**202DSLP, 202DS Atex & M450LP** – safe bagging of contaminated dust to prevent it from entering the atmosphere. No handling, simply secure & dispose.

### 5. Easy change filters

**All models** – one quick & easy action - remove filter from the vacuum body, untie from frame & replace. 'H' Filters are available for all models.
