

# Double Jeu

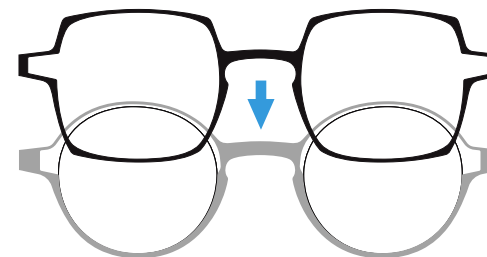

Graphic illusion

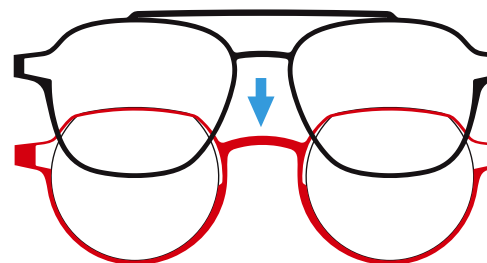

Behind each model of the DOUBLE JEU collection are two frames cut from very thin stainless-steel sheets that are fixed to each other. Their shapes are different enough to create a visually contrasting effect, which is further accentuated by the original cut of the Nylon lenses and the two-tone colouring. The two designs meet at the end pieces and the temples end in a minimalist style with acetate tips.

All the metal parts are extremely fine. They are held together by concealed soldering points. Made entirely by hand, the colouring is applied after assembly of the frame. Each and every model requires a high degree of precision to reach the finest and most delicate parts. Achieving this illusion sought by designers requires refined craftsmanship and technical expertise.
