## Measurements

The U-value measurements are carried out with a dedicated hotbox specifically built for the test. This enabled the measurements to be carried out with the daylight systems mounted in a vertical position. The measurements were carried out in accordance with EN-ISO 12567 for windows and doors. The optical measurements were carried out spectrally in accordance with EN 410 using the spectral range of 250-2500 nm. A 2.5 kW HMI light source was used. The measurements were carried out for an angle of incidence of 45 degrees to determine the g-value.
