

Test Kits

Moulds Test Kit

Detects harmful levels of moulds in homes. Provides comparative assessment between problem and non-problem or outdoor areas. Reducing exposure can prevent asthma, sinus infections and allergies.

Mould Test Kit Plus

Detects harmful levels of moulds in homes. Provides species identification of moulds, such as *Stachybotrys Chartarum* (toxic black mould) and others, and provides you with a comparative assessment between problem and non-problem or outdoor areas.

Bacteria Test Kit

Sewage and Pathogens

Detect harmful and pathogenic bacteria in homes on work surfaces or following plumbing leaks.

Can prevent exposure to harmful bacteria such as E. Coli, MRSA or Salmonella or indicate cleanliness following a clean-up.

Allergens Test Kit

Dust mites and others

Can detect more than 18 different allergens. Identifies the types and sources of allergens present in your home.

Reduction of allergens can prevent asthma attacks, respiratory problems and eczema.

Formaldehyde Test Kit

Detects very low levels of formaldehyde in homes or working environment causing odours, eye and lung irritations.

Can be used to detect other common industrial aldehydes and for evaluation of regulatory compliance.

Volatile Organic Compounds Test Kit

Can detect over 170 organic compounds found in the indoor environment from domestic and industrial sources, building materials and household products.

Exposure to VOC's is associated with odours, nausea, fatigue and neurological problems.

Lead Test Kit

Paint, dust and materials

Can detect the presence of harmful lead in paint, household dust and building materials.

Exposure to lead has been associated with behavioural and development problems in children, anaemia, cardiovascular problems, kidney disease and many others.
