**thinkWhere**

groundMapper

Free 30 day trial available

An innovative Cloud-based digital mapping system. Allows multiple stakeholders to easily share a common view of project-based land, property and ground asset information

Features

- Easy-to-use interactive mapping interface

- Essential GIS tools and functionality

- Online data editing

- Access to an extensive suite of geographic data including Development Constraints and Open Data products

- Advanced document management and editing

Benefits

- Simplifies data management

- Manages a full portfolio of projects through a single, administration interface

- Quick setup, no installation required

- Helps improve stakeholder engagement and collaboration

- Data held securely, available 24/7/365

About

groundMapper™ is a powerful, easy-to-use GIS application for sharing a common view of project data with multiple stakeholders.

Designed specifically with simplicity and ease of use in mind, groundMapper™ is lightweight and intuitive. It provides simple web mapping and GIS capabilities to make it easy to access and share your geographic information within your organisation, with project stakeholders or with your customers.

With your business processes running more efficiently, your administrative overheads and operational costs will be significantly reduced, and your projects will run more smoothly.

"The thinkWhere solution is impressive, and has afforded us the opportunity to take-to-market a genuinely powerful Site Assembly Solution. As a result our clients realise many benefits, all of which come down to speed and saving of our client's budgets."

Farming / Agriculture

Forestry

Land and Property

Legal Conveyancing

Planning / Infrastructure

Utilities

Uses

• Planning and management of the built and natural environment

• Ground asset management

• Environmental Monitoring

• Stakeholder collaboration and engagement

Data Management : groundMapper™ streamlines data collation and sharing by automatically bringing together a collection of digital maps and associated geographic data relating to your projects.

Add your Data : On top of the base mapping, simply add your own project data including PDFs, photos, design drawings, etc. Easily links information.

A Common View : groundMapper™ brings all your project information together as a common view, stored in one place, for use on or off-site. All your project information at the touch of a button.

Share your Data : groundMapper™ outputs your project data as an interactive web maps which can then be shared with your stakeholders using a secure login.

"The Aberdeen Western Peripheral Route/Balmedie-Tipperty project will bring real benefit to the local economy to the North East of Scotland via reduced journey times and congestion. Central to the project and the planning is sound and up-to-date mapping which we can share quickly and easily across stakeholders. groundMapper has transformed this part of the project and contributes to speed and efficiency of the process considerably."
