

IBM CHOSE POWER ACCESS SYSTEMS TO KEEP A CLEAN FACE

After several years of neglect IBM needed a new gantry and cradle system to clean and maintain their prestigious offices in Portsmouth and they turned to Power Access Systems for a bespoke solution.

IBM had a problem. With a very large area of glazing to keep clean and no permanent access system installed Power Access Systems, working directly for IBM, was able to install a pair of travelling gantries and cradles specially designed for the task.

The travelling gantries provide safe and efficient access to the curved glazing over the corridors connecting four satellite office buildings, while the suspended cradles provide access to the vertical glazing and enable IBM's cleaning contractor to maintain the building to the high standards expected by a leading multi-national company.

This is one of many bespoke access systems that Power Access Systems has installed since 1983.
