Touch Screen

Viewer Display
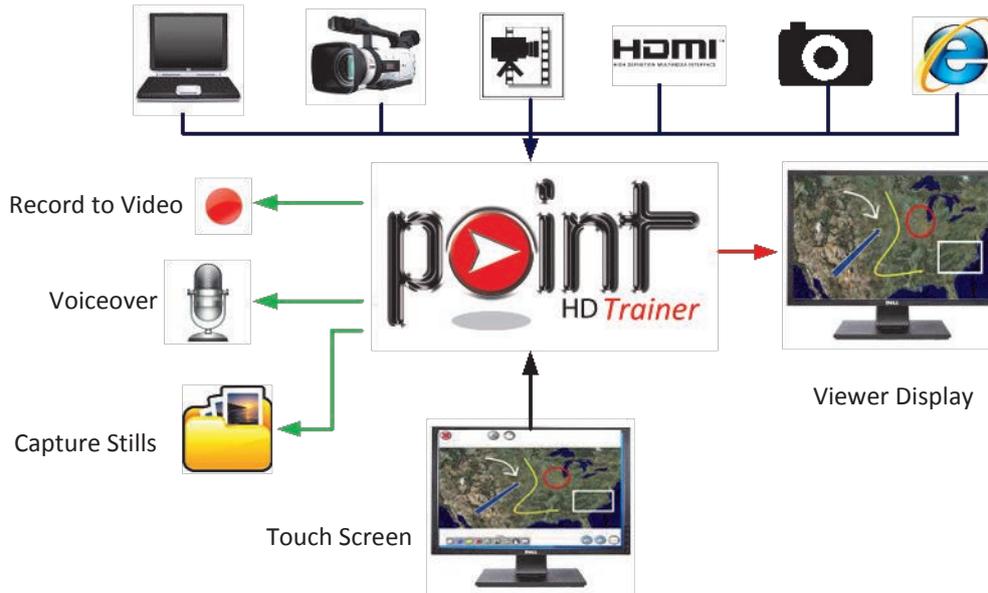

POINT-HD Trainer is unlike any other Telestrator you have encountered before.

Point-HD Trainer the easy to use, powerful annotation application for use with Laptop's and PC's.
The all in one Telestrator solution enables visually captivating annotations to be made in real time over Live Video, Video Files, Still Images, Web pages, Streaming Video, DVI, VGA, HDMI, SDI, CV, Y/C, YUV, RGB and USB / FireWire video inputs.

Capture still images with annotations for easy handouts, record video with drawings in high resolution MPEG4 (H264) with ability to voice over in real time. Point-HD Trainer can import and use custom graphics as part of the tool set. The entire interface and tools can be customized to individual preferences, as well as the ability to recall multiple custom setups during a live presentation. Point-HD Trainer provides a secondary viewer output window which can be scaled to any size or resolution, the viewer display shows the video with annotations, the tools & buttons are not displayed on the output window. A Live / Preview button allows the presenter to hide the output of viewer display, whilst the Live Loop Recording function allows users to scroll back, pause or play on a live video input in real time, in case something was missed first time around.

Point-HD Trainer is a software based application which provides many benefits over other hardware based systems, not only is it very easy to use, it allows users to create and recall multiple customized interfaces where each interface has just the tools they need and where the buttons are laid out as preferred by each presenter. Users can import custom graphics and use these as part of their toolset. Unlike other hardware based devices, with Point-HD Trainer your investment will not become outdated, as new tools and features are added the software can be updated easily.

POINT-HD Trainer, The easy to use solution which captivates viewers.

TOOLS

Add custom graphics, textures and animations to the default tools to give the Telestrator graphics an individual style. POINT-HD provides the ability to access multiple interfaces, which can be easily recalled live, each interface can have a unique set of tools and button layouts. You can even change the look of the default buttons by using your own graphics.

Stretchy Arrows • Draw • Curved Arrows • Graphics • Spotlights • Split Lines • Hot Spot Triggers • Angles • Spot Zooms
