Hole Finishing with Kennametal

Owning the entire process chain from raw materials all the way to reconditioning means Kennametal is almost the only source in the metalworking industry where you can get all types of Hole Finishing tooling, from reaming and fine boring to motion tooling, directly from one hand. Kennametal is capable of offering you customised solutions for your application that are the best fit for your machining challenge without any limitations, in regard to portfolio or capacity.

PCD Tooling

- Extremely productive and tailored for satisfying your high-volume production needs.
- Several standard PCD grades, like KD1415™ and KD1425™, are available to provide the highest tool life and cutting data as well as unmatched surface and diameter tolerance quality.
- Platforms are available depending on your application and preference from steel to carbide based, adjustable pocket seats, fine-boring components like Romicron™ or FB cartridges, spindle couplings, or SIF™ steerable adaptors.

Multiflute Reaming

- RMS™, RMB™, and RHM™.
- Highly productive and easy to apply.
- Large, standard, off-the-shelf portfolio of solid carbide, cermet, carbide-tipped, and modular reaming tools, all ground to achieve H7 without any customisation.
- Complex Specials with multiple steps, coupling, and length variations are available.
- Intermediate sizes, grades, and lead chamfers available with short delivery.

Padded Reaming

- RIQ™ Quattro Cut™ and RIR™.
- Highest precision and surface quality achievable but still easy to apply.
- RIQ is the market-leading reaming technology, enabling you to leave out any back taper adjustment, dramatically reducing setup time and effort while still offering highest accuracy and surface quality and four cutting edges with PCD, CBN, carbide, or cermet.
- RIR provides you the most stable pocket seat and fail-safe clamping, from smallest to largest diameters.
- Combine the large, standard RIQ and RIR insert offering with your customised tool body.

Fine Boring

- Romicron™ and ModBORE™
- Extremely flexible, covering a very large diameter and length range.
- Offers the latest grade technology by using standard turning inserts.
- Romicron enables diameter modifications directly at the machine by hand without setup equipment or accuracy affecting lock screws.
- ModBORE offers a very large diameter range with each type of tool along with roughing to finishing tooling and can be easily and safely adapted to every KM™ spindle.

Motion Tooling

- Sophisticated tooling achieves most challenging tasks.
- Large, customised Complex Solution portfolio of:
 - Linear feed out heads.
 - Eccentric actuating heads.
 - Pivot heads.
 - Cylinder boring tools.
 - Line boring bars.
 - Bottle boring tools.
 - Valve seat and guide tools.
 - Machining centre tools.
- Depending on your application and preference, tools are based on the positive-stop-principle; use drawbars, like with engineered solution machines, or don't require machining centre modifications at all.

Ra Surface roughness

NOTE: Surface roughness values are guidelines and depend on the application, coolant situation, machine, and cutting data applied.

Cylinder Head

Hole Finishing

RIQ™ QUATTRO CUT™ VALVE SEAT & GUIDE PARENT BORE

- Valve seat and guide parent bore machining combined.
- Tolerance range 8 µm.
- Cast iron.
- Machining centre with internal coolant.

CHALLENGE

- RIQ padded reamer with integrated hydraulic chuck.
- RIQ Full face CBN KB1630™ insert.
- RMS™ reamer for guide parent bore.

SOLUTION

- vc 425 m/min f 0,10 mm/rev valve seat.
- vc 130 m/min f 0,60 mm/rev valve guide.

CUTTING DATA

- Four usable cutting edges per CBN insert.
- CBN RIQ insert with 28.000 bore tool life.
- 1.400 bores with regrindable RMS reamer.

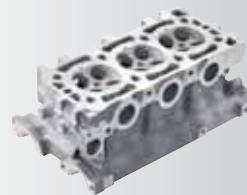

RESULT

- Cost savings due to four edged full face CBN insert.
- No insert back taper adjustment needed.
- Same RPM at both stages saving time of spindle acceleration and deceleration.

BENEFIT

Cylinder Head

Polished flutes
for improved
chip evacuation

PCD SEAT & GUIDE PARENT BORE PCDRSC04RLE
CHALLENGE

- Valve seat and guide parent bore machining combined.
- Tolerance range H7.
- Aluminium.
- Machining centre with internal coolant.

SOLUTION

- PCD tipped, steel based tool (valve seat) with shrink in PCD tip, carbide based reamer (valve guide) with less than 4 µm total run out.

CUTTING DATA

- v_c 344 m/min f 0,60 mm/rev valve seat.
- v_c 985 m/min f 0,60 mm/rev valve guide.

RESULT

- Tool life of 456.000 bores.

BENEFIT

- Productivity increases as same RPM applied to both seat and guide stages.
- Lowest possible run out resulting in higher tool life.

Cylinder Head

RIQ serratation defines valve seat angle

Hole Finishing

RIQ™ QUATTRO CUT™ VALVE SEAT & GUIDE MACHINING

- Valve guide machining combined with primary and secondary seat angles.
- Sinter metal.
- Concentricity of seat to guide less than 50 µm.
- Machining centre with internal coolant.

CHALLENGE

SOLUTION

- RIQ Valve Seat tooling with integrated hydraulic chuck.
- RIQ K68™ carbide inserts and solid carbide RMS™ multiflute reamer.

CUTTING DATA

- vc 80 m/min f 0,10 mm/rev valve seat.
- vc 80 m/min f 0,32 mm/rev valve guide.

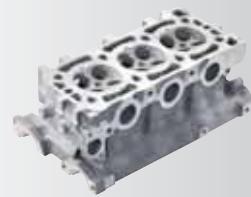

RESULT

- Tool life of 12.000 valve seats per insert.

BENEFIT

- Twelve usable cutting edges per carbide insert.
- Due to high precision RIQ pocket seat there is less setup effort as no angular adjustment of the insert is needed.
- Able to adapt RIR™ padded reamer machining the valve guide.

Cylinder Head

RIQ serration defines valve seat angle

RIQ™ QUATTRO CUT™ VALVE SEAT & GUIDE MACHINING
CHALLENGE

- Valve guide machining combined with primary and secondary seat angles.
- Sinter metal.
- Concentricity of seat to guide less than 50 µm.
- Transfer line with internal coolant.

SOLUTION

- RIQ Valve Seat tooling with carbide bushing for Valve Guide reaming tools.
- RIQ KB1630™ insert with TiN wear indicator.
- RIR™ padded reamer machining.

CUTTING DATA

- v_c 80 m/min f 0,07 mm/rev valve seat.
- v_c 60 m/min f 0,14 mm/rev valve guide.

RESULT

- Tool life of 18.000 valve seats per roughing insert.
- Tool life of 12.000 valve seats per roughing insert.

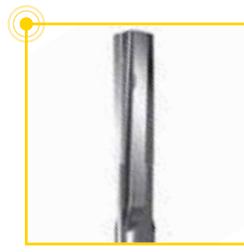

BENEFIT

- Twelve usable cutting edges per full face CBN insert.
- Due to high precision RIQ pocket seat there is less setup effort as no angular adjustment of the insert is needed.
- Able to adapt RMS™ solid carbide reamer machining the valve guide.

Cylinder Head

Hole Finishing

Semi finish stage
after pilot hole

PCD insert with
chipbreaker

RMS™ VALVE GUIDE MACHINING

- Valve guide bore Ø 6mm (.236").
- Tolerance range 12 µm H7.
- Brass material, lead free.
- Concentricity of seat to guide less than 50 µm.

CHALLENGE

SOLUTION

- RMS solid carbide reamer — engineered solution.
- Machining centre — with semi finish stage for picking up pilot hole.
- Transfer line — without semi finish stage.

CUTTING DATA

- v_c 30 m/min (98 SFM).
- f 0,42 mm/rev (.017 IPR).

RESULT

- Tool life of 3.000 bores.

BENEFIT

- No presetting is needed.
- Productivity increases due to four effective cutting edges compared to one with padded reamers.

RIR™ VALVE GUIDE MACHINING

- Valve guide bore Ø 6mm (.236").
- Tolerance range 12 µm H7.
- Brass material, lead free.
- Concentricity of seat to guide less than 50 µm.

CHALLENGE

SOLUTION

- RIR padded reamer with PCD guide pads.
- Single edged KD1415™ PCD insert with chip breaker.

CUTTING DATA

- v_c 60 m/min (197 SFM).
- f 0,14 mm/rev (.006 IPR).

RESULT

- Tool life of 100 bores.
- Surface finish Rz 6.3 µm.

BENEFIT

- Secure process due to very good chip control on lead free brass.

Cylinder Head

MOTION TOOLING VALVE SEAT & GUIDE MACHINING
CHALLENGE

- Semi-finish and finish machining of primary seat angle and valve guide in one operation.
- Sinter metal.
- Transfer line with internal coolant.

SOLUTION

- Taper turning head with quill for reamer.

CUTTING DATA

- v_c 271 m/min f 0,05 mm/rev valve seat.
- v_c 60 m/min f 0,11 mm/rev valve guide.

RESULT

- Run out of guide to seat 7 µm.
- Cylindricity of guide 12 µm.

BENEFIT

- Higher accuracy of valve seat angles as machining result is independent from insert wear.
- Time saving combination with valve guide reamer.

Cylinder Head

Hole Finishing

Polished flutes in for improved chip evacuation

Chipformer in carbide body

PCD STEP REAMING PCDCSC22RLE

- Valve lifter bore Ø 12mm (.472").
- Tolerance range 18 µm G7.
- Aluminium G-AISI7Mg.
- Machining centre with internal coolant.

CHALLENGE

SOLUTION

- PCD tipped, carbide based reamer and counter sinker with internal coolant.
- Four effective cutting and chamfering teeth.
- KD1415™.

CUTTING DATA

- vc 400 m/min (1.312 SFM).
- f 0,10 mm/rev (.004 IPR).

RESULT

- Tool life of 125.000 holes.
- Surface finish better than Rz 1.5 µm.

BENEFIT

- Secure process and very good concentricity.

PCD STEP REAMING PCDCSC02RLE

- Injector bore Ø 7,75–19,5mm (.305–.768").
- Tolerance range 5 µm.
- Aluminium G-AISI7Mg.
- Machining centre with internal coolant.

CHALLENGE

SOLUTION

- PCD tipped, carbide based tool with PCD guide pads at Ø 19,5mm and internal coolant.
- Two effective cutting and chamfering teeth.
- KD1415™.

CUTTING DATA

- vc 220 m/min (722 SFM).
- f 0,35 mm/rev (.014 IPR).

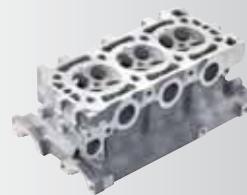

RESULT

- Tool life of 400.000 bores.
- Surface finish better than Rz 3 µm.

BENEFIT

- Secure process due to chipformer in carbide body improving chip formation.

Cylinder Head

RIQ pocket for indexing
without adjustment

RIQ™ QUATTRO CUT™/RIR™ PADDED REAMING
CHALLENGE

- Injector bore Ø 10,3–41mm (.406–1.614").
- Tolerance range 18–25 µm H7.
- Cast iron GG25.
- Quick-change interface between first and second machining stage.

SOLUTION

- First stage: RIR reamer with RIQ profile insert.
- Second stage: RIQ padded multi step reamer.
- Radial actuated KST interface as stages have different tool life due to different diameters.

CUTTING DATA

- v_c 23–90 m/min $n = 700$ RPM.
- f 0,32 mm/rev (.025 IPR).

RESULT

- Tool life of 1.000 components per insert edge.
- Surface finish better than Rz 16 µm.

BENEFIT

- No back taper adjustment needed with RIQ inserts.
- Front and back end of tool can be handled independently.
- RIQ pocket seat allows insert indexing without adjustment reaching < 20 µm axial run out.

Cylinder Head

Hole Finishing

RIQ™ QUATTRO CUT™ PADDED REAMING

- Oil seal bore finishing Ø 56,4mm (2.220").
- Tolerance range 30 µm H7.
- Aluminium.
- Cambore to oil seal bore self alignment.
- Transfer line with internal coolant.

CHALLENGE

SOLUTION

- RIQ padded reamer with two PCD KD1415™ full-face inserts floating on finish machined cam bore.
- Self-aligning reamer body to ensure cam bore to oil seal bore concentricity.

CUTTING DATA

- vc 326 m/min (1.070 SFM).
- f 0,32 mm/rev (.004 IPR).

RESULT

- Tool life of 80.000 cylinder heads.

BENEFIT

- No insert back taper adjustment needed.
- Cost savings due to four edged full face PCD RIQ insert.

Semi finish and finish stage combined

RIQ™ QUATTRO CUT™ PADDED REAMING

CHALLENGE

- Cambore finishing Ø 25mm (.984").
- Tolerance range 21 µm H7.
- Aluminium.
- Deflection less than 20 µm over total length.
- Machining centre with internal coolant.

SOLUTION

- RIQ padded reamer with two PCD KD1415™ full-face inserts for semi-finishing and two PCD KD1415 full-face inserts for finishing.

CUTTING DATA

- v_c 334 m/min (1.096 SFM).
- f 0,16 mm/rev (.006 IPR).

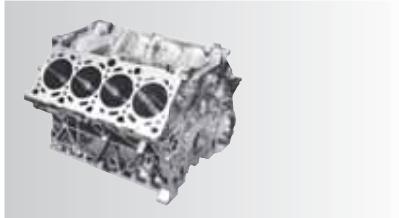

RESULT

- Tool life of 160.000 cylinder heads.
- Surface finish Ra 0.3 µm.

BENEFIT

- No insert back taper adjustment is needed.
- Cost savings due to four edged full face PCD RIQ insert.
- Setup time reduction from 8 h with competitive tooling to less than 1/2 h with RIQ.

Cylinder Block

Hole Finishing

ROMICRON™ FINE BORING

- Cylinder bore Ø 78,45mm (3.089").
- Tolerance range 20 µm.
- Cast iron GG26.
- Replace low productivity reaming process.
- Machining centre HSK100 with internal coolant.

CHALLENGE

SOLUTION

- Multicron engineered solutions tool with three finishing cartridges with individual set up and automatic wear compensation with front CLB knob.
- CPGW060204S01015C KB1630.

CUTTING DATA

- v_c 1.281 m/min (4.200 SFM).
- f 0,42 mm/rev (.017 IPR).

RESULT

- Tool life of 2.000 components per setup.
- Cylindricity 13 µm.
- Surface finish Ra 2.4 µm.

BENEFIT

- High productivity due to three cutting edges and automatic wear compensation inside of machine.
- Bore tolerance range of 20 µm easily and consistently achieved due to 1 µm per click in radius adjustment executed by machine.

Cylinder Block

CLB screw for automatic
wear compensation

MOTION TOOLING
CHALLENGE

- Cylinder bore Ø 75mm (2.953").
- Cast iron GG25.
- Semi-finish and finish operation combined in one tool with coolant pressure activated finish stage.
- Machining centre with internal coolant.

SOLUTION

- Motion tool with feed out cartridges.
- Two channel coolant system with coolant supply for inserts and feed out cartridges.
- Solid CBN inserts with eight cutting edges KB1340™.

CUTTING DATA

- v_c 600 m/min f 0,05 mm/rev semi-finish.
- v_c 600 m/min f 0,11 mm/rev finish.

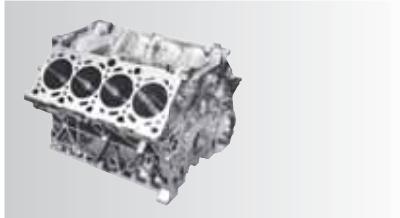

RESULT

- Tool life of 2.000 bores per tooling setup.
- Cylindricity better than 8 μm .

BENEFIT

- Higher productivity as roughing at forward and finishing at backward movement — with coolant feed out.
- Finish diameter adjustable with CLB process.
- Improved cylindricity than two separate operations.

Cylinder Block

Bayonet quick
change system

Hole Finishing

ROMICRON™ FINE BORING

- Cylinder bore Ø 78,933mm (3.108")
- Cast iron GG25.
- Reduce setup and adjustment effort with roughing and finishing at various cylinder blocks.
- Engineered solutions vertical mill with internal coolant.

CHALLENGE

SOLUTION

- Romicron engineered solutions tool with quick-change interface and drawbar actuated finish cartridge.
- SNGN090308T00520 KY1615 roughing insert.
- CPMT09T308LF KT315™ finishing insert.

CUTTING DATA

- vc 580 m/min f 0,26 mm/rev roughing.
- vc 580 m/min f 0,19 mm/rev finishing.

RESULT

- Tool life of 100 components per setup.
- Cylindricity 13 µm.
- Surface finish Ra 1,5 µm.

BENEFIT

- Bore tolerance easily and consistently achieved due to 1 µm per click in radius adjustment.
- Weight reduction from 11 kg to 1,8 kg.
- Setup time reduction from 1,5 h to 15 min.
- Secure process resulting in higher cpk value.

Cylinder Block

Hole Finishing

ROMICRON™ FINE BORING**CHALLENGE**

- Piston bore Ø 68mm (2.677").
- Tolerance range 30 µm.
- Cast iron.
- Machining centre HSK100A with internal coolant.

SOLUTION

- Engineered solution SVS4B head.
- Two semi-finish and one finish cutting edge.
- TPGW110204S01015C KB1630™.

CUTTING DATA

- v_c 595 m/min (1.952 SFM).
- f 0,15 mm/rev (.006 IPR).

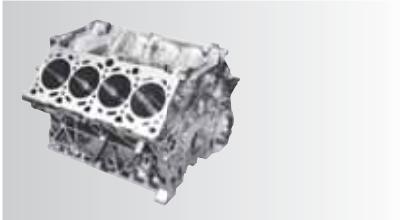

RESULT

- Surface finish Ra 0.8 µm.
- Roundness better than 8 µm.

BENEFIT

- 80% less adjustment time needed.
- Bore tolerance range of 30 µm easily and consistently achieved due to 1 µm per click in radius adjustment.

Cylinder Block

Hole Finishing

ROMICRON™ FINE BORING

- Cylinder bore Ø 96,9mm (3.815").
- Tolerance range 30 µm.
- Cast iron.
- Machining centre with internal coolant.

CHALLENGE

SOLUTION

- Romicron standard KR50SVS4B094M head with engineered solution steep taper adaptor with chamfering inserts.
- CPGW060208S01015C KB1630™.

CUTTING DATA

- v_c 600 m/min (1.969 SFM).
- f 0,30 mm/rev (.012 IPR).

RESULT

- Tool life of 800 components.
- Surface finish Ra 3 µm.

BENEFIT

- High productivity increase as a result of 2x cutting speed and 40% higher feed rate compared to previous solution.
- Bore tolerance range of 30 µm easily and consistently achieved due to 1 µm per click in radius adjustment.

Cylinder Block

Semi and finishing stages combined

ROMICRON™ FINE BORING
CHALLENGE

- Cylinder bore Ø 103,17mm (4.062").
- Tolerance range 50 µm.
- Cast iron.
- Semi-finish and finish operation combined.
- Machining centre HSK100A with internal coolant.

SOLUTION

- Romicron engineered solutions tool with two semi-finishing, one finishing and one chamfering cartridges.
- Automatic wear compensation with CLB.
- SCGW09T308S01015C KB1630™.

CUTTING DATA

- v_c 1.000 m/min (3.281 SFM).
- f 0,25 mm/rev (.010 IPR).

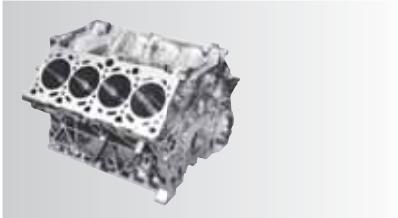

RESULT

- Tool life of 450 components per cutting edge.
- Cylindricity less than 17 µm.
- Surface finish Ra 2.4 µm.

BENEFIT

- High productivity due to automatic wear compensation inside of machine.
- 1 µm per click in radius adjustment.

Cylinder Block

Individual
and simultaneous
CLB adjustment

Hole Finishing

ROMICRON™ FINE BORING

- Cylinder liner Ø 127,94mm (5.037").
- Cast iron GGzCrMo250.
- Increase productivity, reduce amount of constant stock for following honing process.
- Custom vertical lathe with internal coolant.

CHALLENGE

SOLUTION

- Multicron engineered solution tool with five finishing cartridges with HSK80C adaptor for facing and boring through feed-out system included.
- CPGW060204S01015C KB1630™.

CUTTING DATA

- v_c 1.200 m/min (3.937 SFM).
- f 0,50 mm/rev (.020 IPR).

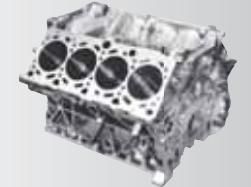

RESULT

- Tool life of 4.000 components per setup.
- Cylindricity 8 µm.
- Surface finish Ra 2,0 µm.

BENEFIT

- High productivity due to five cutting edges.
- Bore tolerance range of 20 µm easily and consistently achieved due to 1 µm per click in radius adjustment.

1 µm per click
in radius adjustment

ROMICRON™ FINE BORING

CHALLENGE

- Crank bore finishing Ø 60mm (2.362").
- Tolerance range 30 µm.
- Cast iron GG25.
- Reduce setup and cycle time.
- Transfer line with internal coolant.

SOLUTION

- Line boring bar with Romicron standard cartridges KRMSVS00M055M.
- Semi-finishing and finishing operations in one.
- CPGT060204LF KC5010™.

CUTTING DATA

- vc 150 m/min f 0,2 mm/rev semi finish.
- vc 150 m/min f 0,12 mm/rev finish.

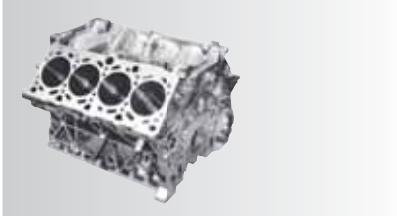

RESULT

- Tool life of 120 components.
- Surface finish better than Rz 16 µm.
- Roundness better than 5 µm.

BENEFIT

- Semi-finishing operation during forward movement and finishing operation during backward movement of the workpiece.
- Use of standard off-the-shelf Romicron tooling with engineered solution line boring bar.
- Time saving due to low presetting effort with 1 µm per click in radius adjustment.

Cylinder Block

Hole Finishing

Semi finish and
finish stage combined

FINE BORING

- Crank bore finishing Ø 37mm (1.457").
- Tolerance range 5 µm.
- Cast iron.
- Maintain tolerance for minimum of 50 bores.
- Machining centre with internal coolant.

CHALLENGE

SOLUTION

- Line boring bar with tool bits adjusted by differential screw for more sensitivity.
- Dynamically balanced by design with axial holes ensuring highest stiffness of tool.

CUTTING DATA

- vc 160 m/min f 0,12 mm/rev semi-finish.
- vc 160 m/min f 0,08 mm/rev finish.

RESULT

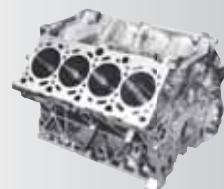

- Customer proprietary information.

BENEFIT

- Use of standard C-style inserts in LF reduce tooling costs in KCK15.
- Reduction of cycle time.
- Easy and fine adjustments ensure a stable process.

Cylinder Block

RIQ chamfering, plunging
and reaming insert

RIQ™ QUATTRO CUT™ PADDED REAMING
CHALLENGE

- Balancing shaft bore Ø 31–39mm.
- Cast iron.
- Reaming of three diameters, machining of three chamfers and one facing operation in one tool.
- Minimum quantity lubrication MQL.

SOLUTION

- RIQ padded reamer with one effective cutting edge combining chamfering, counter sinking and reaming stage in one tool, using two reaming RIQ and one special RIQ insert.

CUTTING DATA

- v_c 100 m/min (328 SFM).
- f 0,14 mm/rev (.006 IPR).

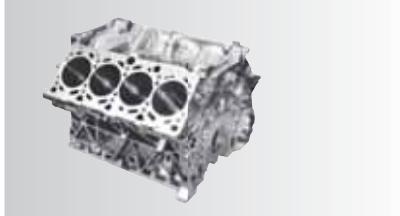

RESULT

- Tool life of 8.000 bores per insert.
- Surface finish Rz 10 μm .

BENEFIT

- No insert back taper adjustment needed.
- Highest angular precision without any adjustment with RIQ at chamfering stage.

Cylinder Block

Hole Finishing

RIQ™ QUATTRO CUT™ PADDED REAMING

- Dowel pin bore Ø 15,341mm (.604").
- Tolerance range 50 µm.
- Cast iron GG26Cr.
- Machining centre with internal coolant.

CHALLENGE

SOLUTION

- RIQ padded reamer with HSK interface.
- Coated carbide KC6105™ RIQ inserts with four edges.

CUTTING DATA

- v_c 70 m/min (328 SFM).
- f 0,13 mm/rev (.005 IPR).

RESULT

- Tool life of 96.000 bores per insert.

BENEFIT

- No insert back taper adjustment needed.

KST pre-loaded taper face contact interface

RHM™ MODULAR REAMING

- Position bore Ø 20mm (.787").
- Tolerance range 21 µm N7.
- Cast iron GG26Cr.
- Replace padded double-edged reamer.
- Machining centre with internal coolant.

CHALLENGE

SOLUTION

- Special RHM head with six cutting edges.
- Engineered solution KC6105 TiN coated carbide grade.

CUTTING DATA

- v_c 63 m/min (207 SFM).
- f 0,84 mm/rev (.033 IPR).

RESULT

- Tool life of 336m.

BENEFIT

- 8x higher productivity due to higher feed rate.
- Tool life increased by 240% when compared to previous solution.

Conrod

**ROMICRON™ FINE BORING**

- Pin bore Ø 58,033mm (2.285").
- Brass.
- Combine finishing of crank and pin bore into one tool to increase productivity.
- Machining centre with internal coolant.

CHALLENGE**SOLUTION**

- Romicron engineered-solution tool with two Romicron mechanism in one tool body.
- KC5010™.

CUTTING DATA

- v_c 450 m/min (1,476 SFM).
- f 0,10 mm/rev (.004 IPR).

RESULT

- Tool life of 350 pin bores per insert.
- Surface finish better than Ra 1,0 µm.
- Cylindricity 5 µm.

BENEFIT

- Combination tool increases productivity.
- Bore tolerance range of 26 µm easily and consistently achieved due to 1 µm per click in radius adjustment.

ROMICRON™ FINE BORING

- Crank bore Ø 93,777mm (3.692").
- Steel C70.
- Combine finishing of crank and pin bore into one tool to increase productivity.
- Machining centre with internal coolant.

CHALLENGE**SOLUTION**

- Romicron engineered solution tool with two Romicron mechanism in one tool body.
- KT315™.

CUTTING DATA

- v_c 400 m/min (1,312 SFM).
- f 0,10 mm/rev (.004 IPR).

RESULT

- Tool life of 260 crank bores per insert.
- Surface finish better than Ra 1,0 µm.
- Cylindricity 5 µm.

BENEFIT

- Combination tool increases productivity.
- Bore tolerance range of 26 µm easily and consistently achieved due to 1 µm per click in radius adjustment.

The Kennametal Solution

Kennametal Global Engineered Solutions. Coordinated global resources with world-class manufacturing, process development, and implementation capabilities.

No matter how small or large your project.

- Whether it's a single tailored tool or the development of a comprehensive manufacturing process, Kennametal's team can manage the development, personnel training, and successful implementation of the complete solution.

Regardless of where you're located, Kennametal is everywhere you are.

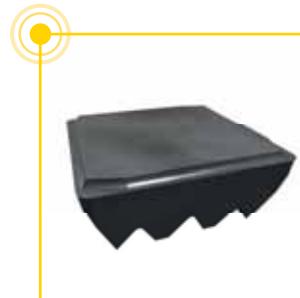

- With Kennametal's team, you receive globally coordinated manufacturing, process development, implementation, and optimization support and key alliances with machine tool builders and other leading technology manufacturers that ensure a complete solution.

Experience the advantages at your Authorised Kennametal Distributor or at www.kennametal.com.

www.kennametal.com.

 **KENNAMETAL®**

Conrod

RIQ cermet insert with
chip former geometry

RIQ™ QUATTRO CUT™ PADDED REAMING

CHALLENGE

- Pin bore Ø 19mm (.748").
- Tolerance range 33 µm H8.
- Steel C70.
- Entry/exit inclined and chip control improvement.
- Transfer line with MQL internal coolant.

SOLUTION

- RIQ padded reamer with two axial staggered RIQ inserts in microfinishing setup.
- Coated cermet RIQ inserts with four edges and special chip former.

CUTTING DATA

- v_c 200 m/min (328 SFM).
- f 0,20 mm/rev (.006 IPR).

RESULT

- Tool life of more than 5.000 components per insert.
- Surface finish Rz 12–14 µm.
- Cylindricity 5 µm.

BENEFIT

- No insert back taper adjustment needed.
- High productivity increase due to higher feed rate when compared to previous fine boring tools.
- Very short chips improve chip evacuation.
- Secure process as surface requirement of Rz 8 µm to Rz 16 µm are achieved.

Conrod

Hole Finishing

ROMICRON™ FINE BORING

- Crank bore Ø 91,24mm (3.592").
- Steel C70.
- Increase productivity with semi-finishing and finishing operations.
- Transfer line with internal coolant.

CHALLENGE

SOLUTION

- Multicron quick-change engineered-solution tool with three semi-finishing and three finishing cartridges.
- Drawbar CLB adjustment of finishing inserts.
- SCMT09T308LF KT315™.

CUTTING DATA

- v_c 230 m/min (820 SFM).
- f 0,36 mm/rev (.014 IPR).

RESULT

- Tool life of 2,320 conrods per insert.
- Surface finish Ra 1,0 µm.
- Cylindricity 2 µm.

BENEFIT

- High productivity due to three cutting edges.
- Quick-change coupling to enable individual cartridge setup at multicron finishing stage.
- Bore tolerance range of 22 µm easily and consistently achieved due to 1 µm per click in radius adjustment.

Conrod

Double feed out mechanism

ROMICRON™ MOTION TOOLING
CHALLENGE

- Crank bore Ø 98,82mm (3.891").
- Tolerance range 26 µm.
- Steel C70.
- Drawbar actuated solution to semi-finish, finish, and chamfer both sides of the crank bore.

SOLUTION

- Motion tool based on Romicron with double feed out mechanism and fixed insert cartridges.
- SCMT09T308LF KC5010™.

CUTTING DATA

- v_c 230 m/min (755 SFM).
- f 0,12 mm/rev (.005 IPR).

RESULT

- Tool life of 600 conrods per insert.
- Surface finish R_a 1.0 µm.
- Cylindricity 2 µm.

BENEFIT

- Very stable and highly productive process as multiple operations are combined.
- Blue print solution for various types of conrods at customer site.

Conrod

Hole Finishing

ROMICRON™ FINE BORING

- Pin bore Ø 16,77mm (.660").
- Crank bore Ø 20,77mm (.818").
- Steel C70.
- Combines roughing, semi-finishing, and finishing operation into one tool.

CHALLENGE

SOLUTION

- Romicron standard head HSK63ASVUBB2116M with engineered-solution boring bar.
- CPMT060204LF KC5010™.

CUTTING DATA

- vc 120 m/min f 0,10 mm/rev roughing.
- vc 120 m/min f 0,05 mm/rev finishing.

RESULT

- Tool life of 2.500 components per insert edge.
- Surface finish Ra 0,5 µm.
- Cylindricity 3 µm.

BENEFIT

- Productivity increase due to combination tool.
- Bore tolerance range of 20 µm easily and consistently achieved due to 1 µm per click in radius adjustment.

Steering Column

Adjustable cartridge
with PCD insert

PCD COUNTERSINKING PCDCSTM03RLE

CHALLENGE

- Bore Ø 26,2; 37,6; and 44mm.
- Tolerance range 21 µm N7.
- Aluminium G-AlSi9Cu3.
- Varying depth of cut ca. 1,5mm.
- Machining centre with internal coolant.

SOLUTION

- PCD tipped, steel-based tool with internal coolant.
- Three effective cutting teeth; KD1415™.
- Standard cartridge SCFCR08CA06 achieves required surface finish range.

CUTTING DATA

- v_c 500 m/min (1.640 SFM).
- f 0,30 mm/rev (.012 IPR).

RESULT

- Surface finish Ra 1,6–2,3 µm.

BENEFIT

- Secure process.

Steering Column

Hole Finishing

PCD COUNTERSINKING PCDCSTA03RLE

- Bore Ø 17,07; 39,1; and 50,9mm.
- Tolerance range 21 µm N7.
- Aluminium G-AISI10Mg.
- Varying depth of cut ca. 2,5mm.
- Machining centre with internal coolant.

CHALLENGE

SOLUTION

- PCD tipped, steel-based tool with SIF™ steerable interface and internal coolant.
- Three effective cutting and chamfering teeth.
- KD1415™.

CUTTING DATA

- v_c 600 m/min (1.969 SFM).
- f 0,30 mm/rev (0,012 IPR).

RESULT

- Tool life of 2.000 metres.

BENEFIT

- Productivity increased due to higher cutting data.

Gear Housing

Hole Finishing

PCD STEP REAMING PCDRSCA04RLE**CHALLENGE**

- Bearing bore Ø 13,5 and 18mm.
- Tolerance range 18 µm H7.
- Aluminium G-AlSi10Mg.
- Varying depth of cut ca. 0,5mm.
- Machining centre with internal coolant.

SOLUTION

- PCD tipped, carbide-based tool shrinked in SIF™ steerable interface with internal coolant.
- Four effective cutting teeth.
- KD1415™.

CUTTING DATA

- v_c 230 m/min (755 SFM).
- f 0,25 mm/rev (0,010 IPR).

RESULT

- Surface finish Ra 0,2 µm.

BENEFIT

- Secure process.

Gear Housing

Adjustable PCD pocket seat

Hole Finishing

PCD COUNTERSINKING PCDCSTMJ04RLE

- Bearing bore Ø 40, 62, 85mm.
- Tolerance range 25 µm S7.
- Aluminium AlSi9Cu3.
- Machine three different diameters with one tool.
- Machining centre with internal coolant.

CHALLENGE

SOLUTION

- PCD tipped, steel-based tool with adjustable pocket seats, SIF™ steerable interface and internal coolant.
- Four effective cutting and chamfering teeth; KD1415™.

CUTTING DATA

- v_c 630–1.340 m/min
- f 0,32 mm/rev
- $n = 5.010 \text{ RPM.}$
(0,013 IPR).

RESULT

- Tool life of 500 workpieces.

BENEFIT

- Secure process with only 1,2 sec cutting time per operation.
- Higher productivity due to combining three operations into one tool.
- Very stable process without chip control issues.

Gear Housing

Highly uneven spacing

PCD STEP REAMING PCDRSTM06RLE
CHALLENGE

- Bearing bore Ø 130mm.
- Tolerance range 25 µm S6.
- Aluminium AISI8Cu3.
- Varying depth of cut ca. 0,5–5mm.
- Machining centre with internal coolant.

SOLUTION

- PCD tipped, steel-based tool with HSK interface and internal coolant.
- Six effective cutting and chamfering teeth in positive cutting position; KD1415™.

CUTTING DATA

- v_c 350 m/min (1.148 SFM).
- f 0,60 mm/rev (0,024 IPR).

RESULT

- Tool life increase versus previous solution.
- Surface finish Ra 0,2 µm.

BENEFIT

- Secure process.

Gear Housing

Hole Finishing

PCD REAMING PCDRSTA03RLE

- Bearing bore Ø 35mm (.984").
- Tolerance range 21 µm H7.
- Aluminium G-AISI10Mg.
- Pre-drilled hole with 0,5mm depth of cut.
- Machining centre HSK63A with internal coolant.

CHALLENGE

SOLUTION

- PCD tipped, steel-based tool with SIF™ steerable interface and internal coolant.
- Three effective cutting and chamfering teeth.
- KD1415™.

CUTTING DATA

- v_c 235 m/min (771 SFM).
- f 0,30 mm/rev (0,012 IPR).

RESULT

- Tool life of 100.000 holes.
- Surface finish Ra 0,2 µm.

BENEFIT

- Secure process despite high L/D ratio.
- Very good surface quality.

Gear Housing

PCD REAMING PCDRSC02RLE
CHALLENGE

- Index bore Ø 11,5mm (0,435").
- Tolerance range 18 µm H7.
- Aluminium G-AlSi10Mg.
- Varying depth of cut ca. 3mm.
- Machining centre HSK63A with internal coolant.

SOLUTION

- PCD tipped, carbide-based tool with shrink in HSK63A adaptor with internal coolant.
- Two effective cutting and chamfering teeth.
- KD1415™.

CUTTING DATA

- v_c 1.005 m/min (3.297 SFM).
- f 0,16 mm/rev (0,024 IPR).

RESULT

- Tool life of 200.000 holes.
- Surface finish Ra 0,2 µm.

BENEFIT

- Secure process and very good surface quality.
- Very short overhang length resulting in very good stability.

Gear Housing

Hole Finishing

PCD REAMING PCDRSTA04RLE

- Bearing bore Ø 80mm (3,150").
- Tolerance range 30 µm H7.
- Aluminium G-AlSi10Mg.
- Pre-drilled hole with 0,5mm depth of cut.
- Machining centre HSK63A with internal coolant.

CHALLENGE

SOLUTION

- PCD tipped, steel-based tool with SIF™ steerable interface and internal coolant.
- Four effective cutting and chamfering teeth.
- KD1415™.

CUTTING DATA

- v_c 400 m/min (1.312 SFM).
- f 0,32 mm/rev (0,013 IPR).

RESULT

- Tool life of more than 30.000 components.
- Surface finish Ra 0,2 µm.

BENEFIT

- Secure process and very good surface quality.

Gear Housing

PCD MULTI-OPERATION TOOL PCDMSTA04RLE
CHALLENGE

- Bearing bore Ø 28 and 90mm.
- Tolerance range 21 and 35 µm H7.
- Aluminium G-AlSi10Mg.
- Pre-drilled hole with 0,5mm depth of cut.
- Machining centre HSK63A with internal coolant.

SOLUTION

- PCD tipped, steel-based tool with two individual adjustable SIF™ steerable interfaces and internal coolant.
- Four effective cutting teeth.
- KD1415™.

CUTTING DATA

- v_c 400 m/min (1.312 SFM).
- f 0,32 mm/rev (0,013 IPR).

RESULT

- Tool life of more than 95.000 holes.
- Surface finish Ra 0,2 µm.

BENEFIT

- Secure process and very good surface quality.

Gear Housing

Hole Finishing

PCD STEP REAMING PCDRSTM04RLE

- Bearing bore Ø 80 and 120mm.
- Tolerance range 30 and 35 µm H7.
- Aluminium G-AISi7Mg.
- Pre-drilled hole with 0,5mm depth of cut.
- Machining centre HSK63A with internal coolant.

CHALLENGE

SOLUTION

- PCD tipped, steel-based tool with HSK63A interface and internal coolant.
- Four effective cutting teeth.
- KD1415™.

- v_c 800 m/min (2.625 SFM).
- f 0,32 mm/rev (0,013 IPR).

CUTTING DATA

- Tool life of more than 400 min.
- Surface finish Ra 0,2 µm.

RESULT

- Secure process and very good surface quality.
- Tool life increase versus previous solution.

BENEFIT

Gear Housing

PCD COUNTERSINKING PCDCSTA03RLE
CHALLENGE

- Bearing bore Ø 81,25 and 90,3mm.
- Tolerance range 30 and 35 µm H7.
- Aluminium G-AlSi7Mg.
- Pre drilled hole with 0,5mm depth of cut.
- Machining centre HSK63A with internal coolant.

SOLUTION

- PCD tipped, steel-based tool with SIF™ steerable interface and internal coolant.
- Three effective cutting and chamfering teeth.
- KD1415™.

CUTTING DATA

- v_c 400 m/min (1.312 SFM).
- f 0,30 mm/rev (0,012 IPR).

RESULT

- Tool life of 10.000 components.
- Surface finish Ra 0,2 µm.

BENEFIT

- Secure process and very good surface quality.

Gear Housing

Hole Finishing

PCD STEP REAMING PCDRSTA03RLE

- Bearing bore Ø 17,984 and 66,037mm.
- Tolerance range 8 and 20 µm.
- Aluminium GD-AlSi7.
- Pre-drilled hole with 0,5mm depth of cut.
- Machining centre HSK63A with internal coolant.

CHALLENGE

SOLUTION

- PCD tipped, steel-based tool with SIF™ steerable interface and internal coolant.
- Three effective cutting teeth.
- KD1415™.

CUTTING DATA

- vc 315 m/min f 0,24 mm/rev Ø 17,984 mm.
- vc 1.156 m/min f 0,15 mm/rev Ø 66,037 mm.

RESULT

- Tool life of 35.000 components.
- Surface finish Ra 0,2 µm.

BENEFIT

- Secure process and very good surface quality.
- Achieves high concentricity and straightness.

Gear Housing

PCD PROFILE MILLING PCDPSTM04
CHALLENGE

- Retraining grooves Ø 60,4 and 90,7mm.
- Tolerance range 60 µm.
- Aluminium G-AlSi10Mg.
- Pre drilled hole with 0,5mm depth of cut.
- Machining centre HSK63A with internal coolant.

SOLUTION

- PCD tipped, steel-based tool with HSK63A interface and internal coolant.
- Four effective cutting teeth.
- KD1415™.

CUTTING DATA

- v_c 1.500 m/min (4.921 SFM).
- f 0,06 mm/rev (0,002 IPR).

RESULT

- Tool life of 50.000 parts.
- Surface finish better than Ra 0,4 µm.

BENEFIT

- Secure process.
- Combining two operations in one tool increases productivity.
- High accuracy in the distance between the two machined grooves.

PCD PROFILE MILLING PCDPSTM04
CHALLENGE

- Retraining grooves Ø 58, 58,6 and 60mm.
- Tolerance range 25 µm.
- Aluminium G-AlSi10Mg.
- Pre drilled hole with 0,5mm depth of cut.
- Machining centre HSK63A with internal coolant.

SOLUTION

- PCD tipped, steel based tool with HSK63A interface and internal coolant.
- Four effective cutting teeth.
- KD1415™.

CUTTING DATA

- v_c 1.500 m/min (4.921 SFM).
- f 0,06 mm/rev (0,002 IPR).

RESULT

- Tool life of 50.000 work pieces.
- Surface finish better than Ra 0,2 µm.

BENEFIT

- Combining machining operations increases productivity.
- Excellent dimensional accuracy.

Differential Housing

Hole Finishing

ROMICRON™ FINE BORING

- Bearing bores Ø 60,22 and 88,85mm.
- Tolerance range 17 µm.
- Ductile cast iron GGG50.
- Finishing, back boring, and chamfering in one tool.
- Machining centre HSK100A with internal coolant.

CHALLENGE

SOLUTION

- Dynamically balanced Romicron engineered solution.
- Individual adjustment of fine boring and back boring stages.
- CPGT060204LF KC5010™.

CUTTING DATA

- v_c 200 m/min (656 SFM).
- f 0,12 mm/rev (0,005 IPR).

RESULT

- Tool life of 240 components per insert.
- Surface finish Ra 1,6 µm.

BENEFIT

- Bore tolerance range of 17 µm easily and consistently achieved due to 1 µm per click in radius adjustment.

Differential Housing

SPHX insert for
precise 90° shoulder

CHALLENGE
PCD STEP REAMING

- Pin bore Ø 60mm (2.362").
- Tolerance range 19 µm H6.
- Ductile cast iron GGG40.
- Finishing bore and 90° shoulder to Ø 55mm.
- Machining centre with internal coolant.

SOLUTION

- Standard Romicron KM50SVS2B107M head with engineered solution cartridge.
- SPHX060204R21 KC7215™ standard double-edged countersinking insert.

CUTTING DATA

- v_c 180 m/min (590 SFM).
- f 0,05 mm/rev (0,002 IPR).

RESULT

- Tool life of 4.000 components per insert.
- Surface finish Ra 1,6 µm.

BENEFIT

- All requirements regarding perpendicularity achieved.
- Bore tolerance range of 19 µm easily and consistently achieved due to 1 µm per click in radius adjustment.

Differential Housing

Adjustable pocket seat

Hole Finishing

PCD STEP REAMING PCDRSTA04RLE

- Bore Ø 40 and 55mm (1,575 and 2,165").
- Tolerance range 30 µm R7.
- Aluminium GD-AISI10Mg.
- Fine boring two diameters with one tool.
- Machining centre with internal coolant.

CHALLENGE

SOLUTION

- PCD steel-based fine boring tool with four effective cutting edges, adjustable pocket seats at Ø 55mm, SIF™ steerable interface, and internal coolant.
- CCMT060202 KM™ one uncoated carbide.

CUTTING DATA

- v_c 340 and 520 m/min $n = 3.000$ RPM.
- f 0,60 mm/rev (0,024 IPR).

RESULT

- Tool life of more than 15.000 components per insert.
- Surface finish Rz 10–12 µm.
- Cylindricity better than 20 µm.

BENEFIT

- All requirements regarding perpendicularity, roundness, and surface quality between Rz 8 µm and Rz 16 µm continuously achieved.
- Higher productivity due to combining three operations in one tool.

Water Pump Housing

CHALLENGE

- PCD COUNTERSINKING PCDCSTA03RLE**
- Bore positions of Ø 21 and 24mm (0,827 and 0,945").
 - Tolerance range 13 and 33 µm.
 - Aluminium AlSi9Cu3.
 - Pre drilled hole with 0,5mm depth of cut.
 - Machining centre HSK63A with internal coolant.

SOLUTION

- PCD tipped, steel-based tool with adjustable pocket seats, SIF™ steerable interface and internal coolant.
- Four effective cutting teeth; KD1415™.

CUTTING DATA

- v_c 600 m/min (1.969 SFM).
- f 0,12 mm/rev (0,005 IPR).

RESULT

- Tool life of 80000 components.
- Surface finish Rz 0,8 µm with Ø 21mm and Rz 12 µm with Ø 24mm.

BENEFIT

- All requirements regarding perpendicularity, roundness, and surface quality between Rz 8 µm and Rz 15 µm at Ø 24mm are continuously achieved.

Water Pump Housing

Hole Finishing

PCD MULTI-OPERATION TOOL PCDMSC02CCE

- Position bore Ø 7,9mm (0,311").
- Tolerance range 22 µm H8.
- Aluminium AlSi9Cu3.
- Combine drilling, back chamfering, and facing.
- Machining centre BT40 with internal coolant.

CHALLENGE

SOLUTION

- Solid carbide, PCD tipped, steel-based tool with back chamfering capability and internal coolant.
- Two effective cutting teeth.
- KD1415™.

CUTTING DATA

- v_c 350 m/min (1.148 SFM).
- f 0,20 mm/rev (0,008 IPR).

RESULT

- Tool life of 50.000 components.
- Surface finish R_z 0,8 µm.

BENEFIT

- Higher productivity due to combining three operations in one tool.

Water Pump Housing

PCD STEP REAMING PCDRSTM04RLE
CHALLENGE

- Bearing bores Ø 10,14–18,45mm.
- Tolerance range 3–10 µm.
- Aluminium GD-AISi9Cu3.
- Pre-casted hole with 0,3mm depth of cut.
- Machining centre HSK32A with internal coolant.

SOLUTION

- PCD tipped, steel-based tool with adjustable pocket seats, SIF™ steerable interface and internal coolant.
- Four effective cutting teeth.
- KD1415™.

CUTTING DATA

- v_c 89–162 m/min $n = 2800$ RPM.
- f 0,4 mm/rev (0,015 IPR).

RESULT

- Tool life of 40.000 components.
- Surface finish Rz 0,8 µm.

BENEFIT

- The quality criterion with an exact alignment of rightness, concentricity, and a high value of surface quality was reached.

Water Pump Housing

Hole Finishing

PCD END MILLING PCDESTM05E

- Face milling of connection face Ø 32mm.
- Aluminium AISI10Mg.
- Casted face with 2,5mm depth of cut.
- Machining centre HSK63A with internal coolant.

CHALLENGE

- PCD tipped, steel-based end mill with HSK63A interface and internal coolant.
- Five effective cutting teeth.
- KD1415".

SOLUTION

- v_c 1.005 m/min (3.294 SFM).
- f 0,06 mm/rev (0,002 IPR).

CUTTING DATA

- Tool life of 3.000 min.
- Surface finish Ra 0,3 µm.

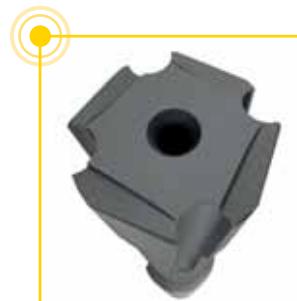

RESULT

- Very low burr formation.

BENEFIT

Planetary Gear Carrier

Chip control geometry

RMS™ MULTIFLUTE REAMING
CHALLENGE

- Bearing bores Ø 8,8mm (.346").
- Tolerance range 9 µm M6.
- Steel 42CrMo4 and 31CrMoV9.
- Increase tool life with long chipping material.
- Machining centre with internal coolant.

SOLUTION

- RMS engineered-solution reamer with four effective cutting edges, internal coolant hole, and coolant channels at shank.
- KC6305™ TiAlN coated carbide.

CUTTING DATA

- v_c 70 m/min (230 SFM.).
- f 0,30 mm/rev (0,012 IPR).

RESULT

- Tool life of 300 components.
- Surface finish Rz 1,0–2,0 µm.

BENEFIT

- All requirements regarding perpendicularity, roundness, and surface quality below Rz 4 µm are continuously achieved.

Planetary Gear Carrier

Hole Finishing

ROMICRON™ FINE BORING

- Bearing bores Ø 35 and 36,5mm.
- Tolerance range 20 µm.
- Steel 20MnCr5.
- Replace padded step reamer.
- Machining centre with internal coolant.

CHALLENGE

SOLUTION

- Romicron standard heads KR32SVS0B93M and HSK63ASVS0B117M.
- CCMT06020411 KT315™ cermet insert.

CUTTING DATA

- v_c 290 m/min (230 SFM).
- f 0,10 mm/rev (0,012 IPR).

RESULT

- Surface finish better than Ra 1,0 µm.
- Cylindricity better than 5 µm.

BENEFIT

- More than 25% reduction in machining time.
- Removing setup of padded reamer outside of the machine results in increased up time.
- Bore tolerance range of 20 µm easily and consistently achieved due to 1 µm per click in radius adjustment.

Planetary Gear Carrier

 Padded reaming
pin machining

RIQ™ QUATTRO CUT™ PADDED REAMING
CHALLENGE

- Bearing pin machining Ø 45mm (1.772").
- Tolerance range 16 µm k6.
- Ductile cast iron GGG40.
- Surface quality of Rmax 10 µm to achieve.
- Special dimensional accuracy requirement.

SOLUTION

- RIQ padded reamer with SIF™ steerable tooling interface and special gashing for external coolant supply.
- Balanced by design and fine balanced.

CUTTING DATA

- v_c 105 m/min (344 SFM).
- f 0,06 mm/rev (0,002 IPR).

RESULT

- Surface finish better than Rz 2,5 µm.
- Roundness 3 µm.
- Cylindricity 6 µm.

BENEFIT

- No insert back taper adjustment needed.
- Faster setup and less scrap.

Brake Caliper

Hole Finishing

RMB™ MULTIFLUTE REAMING

- Main bore Ø 54mm (2,126").
- Tolerance range 50 µm.
- Cast iron.
- Machining centre BT50 with internal coolant.

CHALLENGE

SOLUTION

- UpSharp engineered-solution carbide tipped reamer with 12 cutting edges, clamped in standard Shrink Fit holder.
- TiCN coated carbide.

CUTTING DATA

- v_c 90 m/min (295 SFM).
- f 1,21 mm/rev (0,048 IPR).

RESULT

- Tool life of 1.500–2.000 components.
- Surface finish Ra 2–2,4 µm.

BENEFIT

- Rigid design enables high feed rates increasing productivity.
- Reduces setup effort by using standard tooling with Shrink Fit adaptor.
- Regrindable up to 5x.

Brake Caliper

Hole Finishing

RMS™ MULTIFLUTE REAMING
CHALLENGE

- Pin hole Ø 12mm (0,472").
- Tolerance range 30 µm.
- Cast iron.
- Machining centre HSK63A with internal coolant.

SOLUTION

- UpSharp engineered-solution solid carbide reamer with six cutting edges.
- TiCN coated carbide.

CUTTING DATA

- V_c 75 m/min (246 SFM).
- f 0,8 mm/rev (0,031 IPR).

RESULT

- Tool life of 5.000 holes.
- Surface finish Ra 1,0 µm.

BENEFIT

- Productivity increase.
- Longer tool life than competition.
- Ease of use due to shrink technology.

Brake Caliper

Hole Finishing

RIR™ PADDED REAMING

- Main bore Ø 60mm (2,362").
- Tolerance range 46 µm H8.
- Cast iron.
- Obsolete honing process and produce undercut in the caliper bore.

CHALLENGE

SOLUTION

- RIR padded reamer with end cutting radius profile insert.
- Coated carbide RIR insert with two edges.
- KC6305™.

CUTTING DATA

- v_c 70 m/min (230 SFM).
- f 0,12 mm/rev (0,005 IPR).

RESULT

- Tool life of 800 components per insert.
- Surface finish better than Ra 1,6 µm.

BENEFIT

- Bore tolerance range of 46 µm easily and consistently achieved.
- Cuts cost by eliminating honing and additional undercut operations.

Brake Caliper

RIQ™ QUATTRO CUT™ PADDED REAMING
CHALLENGE

- Main bore Ø 54,02mm (2,127").
- Tolerance range 40 µm.
- Cast iron GGG.
- Reduce setup time and cost per part.

SOLUTION

- RIQ padded reamer with customer specific shank.
- Coated carbide RIQ insert with four edges.
- KC6305™.

CUTTING DATA

- v_c 80 m/min (262 SFM).
- f 0,40 mm/rev (0,016 IPR).

RESULT

- Tool life of 16.000 bores per insert.
- Surface finish better than Ra 1,6 µm.

BENEFIT

- No insert back taper adjustment needed.
- High cost savings due to more than 100% increase in tool life.

Brake Caliper

Hole Finishing

PCD REAMING PCDRSTM04RLE

- Main bore Ø 42mm (1,654").
- Tolerance range 8 µm.
- Aluminium.
- Varying depth of cut between 1–2mm.
- Machining centre with internal coolant.

CHALLENGE

SOLUTION

- PCD tipped, steel-based tool with HSK63A interface and internal coolant.
- Four effective cutting teeth.
- KD1415™.

CUTTING DATA

- v_c 500 m/min (1,640 SFM).
- f 1 mm/rev (0,039 IPR).

RESULT

- Tool life of 400.000–600.000 bores.
- Surface finish better than Ra 1,6 µm.

BENEFIT

- Secure process and high tool life.
- Productivity increase compared to previous solution.

Brake Caliper

Producing two different diameter

RMB™ MULTIFLUTE REAMING
CHALLENGE

- Location holes Ø 39 and 40mm.
- Tolerance range 39 µm H8.
- Cast iron GGG60.
- Produce both diameters with one tool.
- Machining centre with internal coolant.

SOLUTION

- RMB engineered-solution carbide tipped reamer with 10 teeth and internal coolant supply.
- KC6305™ TiAlN coated carbide.

CUTTING DATA

- v_c 70 m/min (230 SFM).
- f 3,30 mm/rev (0,130 IPR).

RESULT

- Tool life of 5.000 holes.
- Surface finish Rz 20 µm better than required Rz 25 µm.

BENEFIT

- Very stable and highly productive process as multiple operations are combined at very high cutting data.

Brake Master Cylinder

RIQ PCD insert with
chip former geometry

Hole Finishing

RIQ™ QUATTRO CUT™ PADDED REAMING

- Piston bore Ø 25,431mm (1,001").
- Tolerance range 10 µm.
- Aluminium AlSi7.
- Combine multiflute and padded reaming process.
- Round table machine with internal coolant.

CHALLENGE

SOLUTION

- RIQ padded reamer in angular micro finishing setup with semi- and fine-finishing inserts.
- RIQ full face PCD KD1415™ as finishing insert.

CUTTING DATA

- v_c 360 m/min (1.181 SFM).
- f 0,24 mm/rev (0,009 IPR).

RESULT

- Tool life of 1.600 bores per insert.
- Surface finish better than Ra 0,4 µm.
- Cylindricity 7 µm.

BENEFIT

- No insert back taper adjustment needed.
- Higher productivity due to combining two operations in one tool and increasing feed by more than 30%.
- Very stable process without chip control issues.
- Better cylindricity than requested.

Brake Master Cylinder

Hole Finishing

RIQ™ QUATTRO CUT™ PADDED REAMING
CHALLENGE

- Piston bore Ø 25,431mm (1,001").
- Tolerance range 10 µm.
- Ductile cast iron.
- Replace honing process with reaming.
- Machining centre with internal coolant.

SOLUTION

- RIQ padded reamer in angular micro-finishing setup with semi- and fine-finishing insert.
- RIQ full face PCD KD1415™ as finishing insert.

CUTTING DATA

- v_c 120 m/min (394 SFM).
- f 0,20 mm/rev (0,008 IPR).

RESULT

- Tool life of 1.600 bores per insert.
- Surface finish better than R_a 0,4 µm.
- Cylindricity 6 µm.

BENEFIT

- No insert back taper adjustment needed.
- Higher productivity due to combining two operations in one tool.

The SPEED to EXCEED

Solid Carbide Taps

The Kennametal Solid Carbide Taps deliver the accuracy you demand at up to four times the speed of HSS taps. Longer tool life, exceptional thread quality, and an array of sizes for ferrous and non-ferrous materials make our taps the most trusted and productive tools in the industry.

- Reduce your operating cost by up to 65%.
- Workpiece-specific grades: KC7542™ for steels and cast irons, KC7512™ for aluminium.
- Go 4x faster with 4x the service life of conventional HSS offerings.
- Wide array of styles and sizes for through or blind hole applications.

Tap into something great at your Authorised Kennametal Distributor or at www.kennametal.com.

www.kennametal.com.

Steering Knuckle

 Hole Finishing
 Hole Finishing

ROMICRON™ FINE BORING
CHALLENGE

- Main bearing bore Ø 82mm (3,228").
- Replace setup of padded reamer and cover various diameters with one tool.
- Machining centre with internal coolant.

SOLUTION

- Romicron engineered solution.
- HSK80ASVSB156M SVS4B head.
- CPMT 060204 FW KCK20™.

CUTTING DATA

- v_c 400 m/min (1.312 SFM).
- f 0,20 mm/rev (0,008 IPR).

RESULT

- Tool life of 1.000 components.
- Surface finish 1,2 µm.
- Cylindricity better than 6 µm.

BENEFIT

- Reduce setup time and cost reduction when standard inserts are used.
- Bore tolerance range of 30 µm easily and consistently achieved due to 1 µm per click in radius adjustment.

Steering Knuckle

Hole Finishing

RMB™ MULTIFLUTE REAMING

- Axle arm Ø 52,935mm (2,084").
- Tolerance range 20 µm.
- Steel St52-3 and 30MnVS6.
- Surface finish and chip control improvements.
- Machining centre with internal coolant.

CHALLENGE

SOLUTION

- RMB engineered-solution cermet tipped reamer with wide chip flutes.
- 6° left hand helix and special lead geometry.
- KT6215™ TiAlN coated cermet.

CUTTING DATA

- v_c 20 m/min f 2 mm/rev entering hole.
- v_c 90 m/min f 2 mm/rev finish hole.

RESULT

- Tool life of 460 components.
- Surface finish R_z 1,3 µm.

BENEFIT

- More than 30% increase in tool life compared to previous competitive tooling.
- Surface finish R_z 1,3 µm better than requested R_z 6,3 µm.

Suspension Subframe

RIR™ PADDED REAMING
CHALLENGE

- Location hole Ø 18,5–23,0mm (0,728–0,906").
- Tolerance range 0,1°.
- Steel.
- Improvement in roundness and angularity.
- Transfer line with internal coolant.

SOLUTION

- RIR taper reamer with HSK interface.
- R904S00771 KC6005™ with two edges.

CUTTING DATA

- v_c 32 m/min (105 SFM).
- f 0,133 mm/rev (0,005 IPR).

RESULT

- Tool life of 800 bores per insert.
- Surface finish Ra 1,6 µm.

BENEFIT

- Predictable performance and cost savings because inserts can be reconditioned.
- Easy to set with three clock padded reamer setting fixtures.
- Roundness improvement over competitive solid carbide multiflute reamer.

Mounting Lever

Hole Finishing

PCD COUNTERSINKING PCDCSTM04RLE

- Reaming pre-casted hole Ø 20mm (0,787").
- Tolerance range 21 µm H7.
- Aluminium AlSi9Cu3.
- 220mm over hang due to workpiece fixture.
- Machining centre with internal coolant.

CHALLENGE

SOLUTION

- PCD tipped, steel-based tool with HSK63A interface and internal coolant.
- Four effective cutting teeth.
- KD1415™.

CUTTING DATA

- v_c 125 m/min (410 SFM).
- f 0,70 mm/rev (0,003 IPR).

RESULT

- Tool life of 60.000 components.
- Surface finish Ra 0,2 µm.

BENEFIT

- Secure process and less scrap than previous competitive solution.
- No adjustment effort due to solid solution.

CV Joint

CHALLENGE

ROMICRON™ FINE BORING

- Central bore Ø 28mm (1,102").
- Tolerance range 18 µm.
- Steel, hardened.
- Material hardness 61–70 HRC.
- Machining centre with MQL internal coolant.

SOLUTION

- Romicron standard head HSK63ASVS00B096M.
- CPGW060208S01015M KB5625™.

CUTTING DATA

- v_c 110 m/min (361 SFM).
- f 0,08 mm/rev (0,003 IPR).

RESULT

- Tool life of 500 bores per insert.
- Surface finish Ra 0,3 µm.

BENEFIT

- Fine adjustments increases productivity resulting in less manufacturing interruptions.
- Bore tolerance range of 18 µm easily and consistently achieved due to 1 µm per click in radius adjustment.

Turbo Charger

Hole Finishing

RIR™ PADDED REAMING

- Bearing bore Ø 9,6mm (0,378").
- Tolerance range 9 µm H6.
- Cast iron.
- Interrupted cut.
- Lathe with internal coolant.

CHALLENGE

SOLUTION

- RIR padded reamer in floating toolholder.
- RIR01E1300 KC6005™ coated carbide insert.

CUTTING DATA

- v_c 50 m/min (164 SFM).
- f 0,33 mm/rev (0,013 IPR).

RESULT

- Surface finish better than Rz 16 µm.
- Cylindricity 10 µm.

BENEFIT

- Increased productivity due to 2x the feed rate when compared to previous competitive tool.

Turbo Charger

Hole Finishing

CHALLENGE**RMS™ MULTIFLUTE REAMING**

- Mounting holes Ø 12mm (0,472").
- Tolerance range 18 µm H7.
- Ductile cast iron.
- Machining centre with internal coolant.

SOLUTION

- RMS standard reamer with six effective cutting edges and internal coolant.
- KC6305™ TiAlN coated carbide.

CUTTING DATA

- v_c 20 m/min (66 SFM).
- f 0,30 mm/rev (0,012 IPR).

RESULT

- Tool life of 1.000 components.
- Surface finish better than Rz 10 µm.

BENEFIT

- Productivity and tool life increase compared to previous solution.

Compressor

Hole Finishing

ROMICRON™ FINE BORING

- Piston bore Ø 23,5mm (0,925").
- Tolerance range 18 µm.
- Aluminium 12% Si.
- Machining centre BT40 with external coolant.

CHALLENGE

SOLUTION

- Standard SVUBB2 head with KR coupling.
- Standard steel boring bar.
- CPGW060204FST KD1400™.

CUTTING DATA

- v_c 367 m/min (1.204 SFM).
- f 0,07 mm/rev (0,003 IPR).

RESULT

- Surface finish Ra 0,6 µm.
- Roundness better than 5 µm.

BENEFIT

- 2x the productivity compared to the current solution.
- 80% less adjustment time needed.
- Bore tolerance range of 18 µm easily and consistently achieved due to 1 µm per click in radius adjustment.

Compressor

Hole Finishing

ROMICRON™ FINE BORING
CHALLENGE

- Piston bore Ø 25mm (0,984")
- Tolerance range 21 µm.
- Aluminium 15% Si.
- Machining centre BT40 with external coolant.

SOLUTION

- Engineered-solution SVS00B head with straight shank clamped in hydraulic chuck.
- CPGW060204FST KD1425™.

CUTTING DATA

- v_c 391 m/min (1.283 SFM).
- f 0,20 mm/rev (0,008 IPR).

RESULT

- Surface finish better than Ra 2,0 µm.
- Roundness better than 20 µm.

BENEFIT

- More than 60% reduction in machining time.
- 80% less adjustment time needed.
- Amortisation in less than two months.
- Bore tolerance range of 21 µm easily and consistently achieved due to 1 µm per click in radius adjustment.

Compressor

Hole Finishing

Polished flutes improving chip evacuation

PCD COUNTERSINKING PCDCSC22RLE

- Bearing hole Ø 12–31mm (0,472–1,220").
- Tolerance range 50 µm.
- Aluminium G-AlSi12.
- Machining centre HSK40 with internal coolant.

CHALLENGE

SOLUTION

- PCD tipped, carbide-based tool with four guiding lands, flat-bottom drilling point and internal coolant.
- Two effective cutting and chamfering teeth; KD1415™.

CUTTING DATA

- v_c 440 m/min (1.444 SFM).
- f 0,20 mm/rev (0,008 IPR).

RESULT

- Surface finish R_z 1–2 µm.
- Roundness better than 5 µm.

BENEFIT

- Productivity increases due to combining different tools in one.
- Tool life increase versus previous solution.

Compressor

RHM MODULAR REAMING

CHALLENGE

- Piston bore Ø 23,5mm (1,220").
- Tolerance range 10 µm.
- Cast iron GGG60.
- Machining centre HSK63 with internal coolant.

SOLUTION

- RHM modular reamer with six cutting edges.
- KT325™ uncoated cermet.
- Standard lead geometry.
- SIF™ steerable tooling.

CUTTING DATA

- v_c 125 m/min (410 SFM).
- f 0,75 mm/rev (0,030 IPR).

RESULT

- Surface finish better than Rz 4 µm.

BENEFIT

- Higher productivity than single-edged padded reamer.

Hydraulic Valve Block

Hole Finishing

RIR™ PADDED REAMING

- Spool bore Ø 18,5mm (0,728").
- Tolerance range 10 µm.
- Cast iron.
- Up to 4mm varying depth of cut.
- Machining centre with internal coolant.

CHALLENGE

SOLUTION

- RIR padded reamer with up to 100mm long cermet guide pads.
- Engineered solution RIR insert with modified chipformer.

CUTTING DATA

- v_c 70 m/min (230 SFM).
- f 0,125 mm/rev (0,005 IPR).

RESULT

- Tool life of 400 min per double-edged insert.
- Roundness and straightness within 10 µm.

BENEFIT

- Very stable process control and predictable performance.

Hydraulic Valve Block

RMS™ MULTIFLUTE REAMING
CHALLENGE

- Rinse slider bore Ø 9,534mm (0,375").
- Tolerance range 6 µm.
- Ductile cast iron 0.7060.
- Three interrupted cuts at a reaming depth of 100mm.
- Special dimensional accuracy requirement.

SOLUTION

- RMS solid carbide reamer engineered solution.
- Special back taper configuration and support margins lands.
- KC6305™ TiAIN coated carbide.

CUTTING DATA

- v_c 150 m/min (492 SFM).
- f 0,72 mm/rev (0,028 IPR).

RESULT

- Tool life of 500 pieces.

BENEFIT

- Speed and feed rates are almost 30x faster resulting in higher productivity.
- Less scrap due to consistent accuracy.

Hydraulic Valve Block

Hole Finishing

PCD COUNTERSINKING PCDCSC02RLE

- Thread core hole Ø 24mm (0,945").
- Tolerance range 21 µm F7.
- Aluminium AlSi9Cu3.
- Pre-drilled hole.
- Machining centre DV40 with internal coolant.

CHALLENGE

SOLUTION

- PCD tipped, carbide-based tool with internal coolant.
- Two effective cutting and chamfering teeth.
- KD1415™.

CUTTING DATA

- v_c 360–750 m/min n = 7.500 RPM.
- f 0,20 mm/rev (0,008 IPR).

RESULT

- Tool life of 100.000 holes.
- Surface finish Ra 0,1 µm.

BENEFIT

- Productivity increase due to combining two operations into one.
- Carbide base increases tool life and accuracy.

ABS Valve Block

**CHALLENGE****PCD COUNTERSINKING PCDCSTA02RLE**

- Bearing bores Ø 20,99 and 24,275mm.
- Tolerance range 20 µm.
- Aluminium AISi1.
- Pre-casted hole with 0,15mm depth of cut.
- Machining centre HSK63A with internal coolant.

SOLUTION

- PCD tipped, steel-based tool with SIF™ steerable interface and internal coolant.
- Two effective cutting and chamfering teeth.
- KD1415™.

CUTTING DATA

- v_c 300 m/min (984 SFM).
- f 0,35 mm/rev (0,014 IPR).

RESULT

- Tool life of 150.000 components.
- Surface finish Ra 0,4–0,6 µm.

BENEFIT

- Very stable process control and predictable performance.
- Very favourable chip creation.

Bearing Seat

KST pre-loaded taper face contact interface

Hole Finishing

RHM™ MODULAR REAMING

- Reaming Ø 35mm (1,378").
- Tolerance range 20 µm.
- Carbon steel, annealed, long-chipping.
- Blind hole limiting chip evacuation.
- Machining centre with internal coolant.

CHALLENGE

SOLUTION

- RHM modular reamer with eight cutting edges.
- KT325™ uncoated cermet.
- Standard lead geometry.
- Short engineered-solution axial clamping tool body.

CUTTING DATA

- v_c 120 m/min (394 SFM).
- f 1,18 mm/rev (0,046 IPR).

RESULT

- Tool life of 145.000 holes.
- Surface finish better than Rz 6,3 µm.

BENEFIT

- Predictable tool life as only 2 µm diameter deviation after 10.000 holes.

Bearing Seat

Hole Finishing

RIQ™ QUATTRO CUT™ PADDED REAMING
CHALLENGE

- Reaming Ø 47mm (1,850")
- Tolerance range 19 µm N6.
- Aluminium AISI9Cu3.
- Machine four different diameters, two spot faces, and four different chamfers with one tool.

SOLUTION

- RIQ padded reamer with full-face PCD KD1415™ insert having four cutting edges.
- SIF™ steerable interface between reaming and fine boring section.

CUTTING DATA

- v_c 236 m/min (774 SFM).
- f 0,08 mm/rev (0,003 IPR).

RESULT

- Surface finish better than Rz 16 µm.

BENEFIT

- No insert back taper adjustment needed.
- Less operations increase productivity.
- Higher accuracy than multiple operations.
- Full-face PCD inserts reduce cost per hole.

FB CARTRIDGE FINEBORING
CHALLENGE

- Reaming Ø 144mm (5,669")
- Tolerance range 40 µm H7.
- Aluminium AISI9Cu3.
- Machine two different diameters.

SOLUTION

- Standard FB fine-boring cartridges with almost back lash free fine adjustment.
- CCGW060204 KD1415™.

CUTTING DATA

- v_c 723 m/min (2,372 SFM).
- f 0,08 mm/rev (0,003 IPR).

RESULT

- Surface finish better than Rz 16 µm.

BENEFIT

- Radial adjustment does not influence axial adjustment of inserts resulting in faster setup.
- Productivity increase with less operations.
- More accurate than previous solution.

Heat Exchanger Plates

RHM™ MODULAR REAMING

- Tube holes Ø 25,25mm (0,994").
- Tolerance range 21 µm H7.
- Stainless Steel 304L.
- Machining centre with external coolant.

CHALLENGE

KST pre-loaded taper face contact interface

RHM™ MODULAR REAMING

- Tube holes Ø 25,25mm (0,994").
- Tolerance range 100 µm.
- Alloy steel, long-chipping.
- Machining centre with internal coolant.

CHALLENGE

SOLUTION

- Special RHM head with six cutting edges.
- KC6305™ TiAIN coated carbide.
- Standard tool body with SIF™ steerable backend.

CUTTING DATA

- vc 36 m/min (118 SFM).
- f 0,79 mm/rev (0,031 IPR).

RESULT

- Tool life of 167 m.

BENEFIT

- Higher productivity as a result of a 50% higher feed rate and 2x speed.
- 200% more tool life than previous competitive solution.

- Special RHM head with six cutting edges.
- KT6215™ TiAIN coated cermet.
- Standard 5xD body clamped into hydraulic chuck.
- KSEM HPGM used for drilling into solid.

SOLUTION

- vc 90 m/min (295 SFM).
- f 0,48 mm/rev (0,019 IPR).

CUTTING DATA

- After more than 30 minutes, only minor wear is visible.

RESULT

- Reduced machining time to less than 60 min per 180 holes.
- Predictable tool life as only 2 µm diameter deviation after 30 minutes.

BENEFIT

RHM™ MODULAR REAMING

- Tube holes Ø 25,25mm (0,994").
- Tolerance range 21 µm H7.
- Steel, annealed, long-chipping.
- Replace HSS shot core drilling.
- Machining centre with internal coolant.

CHALLENGE
SOLUTION

- Special RHM head with six cutting edges.
- KT325™ uncoated cermet.
- Standard 5 x D body clamped into hydraulic chuck.

CUTTING DATA

- v_c 84 m/min (276 SFM).
- f 0,49 mm/rev (0,019 IPR).

RESULT

- Tool life of 189 m.

BENEFIT

- 10x faster when compared to previous competitive core drilling solution.
- 16x higher tool life.

RHM™ MODULAR REAMING

- Tube holes Ø 32mm (1,260").
- Tolerance range 25 µm H7.
- Low alloy steel, annealed.
- Interrupted cut.
- Machining centre with internal coolant.

CHALLENGE
SOLUTION

- Standard RHM head with eight cutting edges.
- KC6305™ TiAIN coated carbide.
- Standard 5 x D body clamped into hydraulic chuck.
- KSEM HPGM used for drilling into solid.

CUTTING DATA

- v_c 60 m/min (197 SFM).
- f 1,12 mm/rev (0,044 IPR).

RESULT

- Tool life of 624 holes.

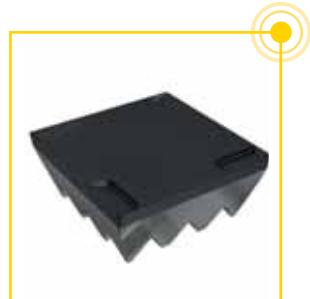

BENEFIT

- Almost 29% productivity increase.
- Close to 25% overall cost reduction due to higher tool life and higher cutting data.

KST pre-loaded taper face contact interface

Pump Housing

Full-face PCD insert with
chipformer geometry

Hole Finishing

RIQ™ QUATTRO CUT™ PADDED REAMING

- Piston bore Ø 18,5mm (0,728").
- Tolerance range 21 µm H7.
- Aluminium.
- Heavy interrupted cut and surface finish Rz 6,3.
- Machining centre with internal coolant.

CHALLENGE

SOLUTION

- RIQ padded reamer with helical chip flute and helical solid carbide guide pad.
- Full-face KD1415™ insert having four cutting edges.
- Positive wiper insert geometry.

CUTTING DATA

- v_c 230 m/min (755 SFM).
- f 0,15 mm/rev (0,006 IPR).

RESULT

- No chip evacuation issues.
- No burr, marks, or scratches at entrance or exit of interruptions.

BENEFIT

- No insert back taper adjustment needed.
- Half cycle time compared to previous competitive tooling.

Hydraulic Pump

RIR™ PADDED REAMING
CHALLENGE

- Piston bore Ø 9,365mm (0,369").
- Tolerance range 10 µm.
- Ductile cast iron GGG40.
- Machining centre with internal coolant.

SOLUTION

- RIR padded reamer with cermet guide pads.
- R901EGS06F AlTiN coated carbide.

CUTTING DATA

- v_c 53 m/min (174 SFM).
- f 0,043 mm/rev (0,002 IPR).

RESULT

- 294 bores per double-edged insert.
- Surface finish Ra 0,8 µm.

BENEFIT

- 200% tool life increase.
- More than 10% reduction in cycle time.
- Consistent quality and stable process due to better chip formation.
- Tolerance achieved was a 50% improvement compared to the previous competitive solution.

Valve Housing

Hole Finishing

ROMICRON™ FINE BORING

- Various bore Ø 170–480mm (6,7–18,9").
- Tolerance range 75 µm.
- Cast iron GG25.
- Automated wear compensation at interrupted cut.
- Machining centre HSK100 with internal coolant.

CHALLENGE

SOLUTION

- Semi-standard SVU120 CLB head with engineered-solution diameter extender and automatic wear compensation with CLB.
- CPGW09T308S01015C KB1630™.

CUTTING DATA

- v_c 800 m/min (2.625 SFM).
- f 0,12 mm/rev (0,005 IPR).

RESULT

- Tool life of 1.200 minutes per insert.
- Surface finish better than Rz 16 µm.

BENEFIT

- More than 30% reduction in manufacturing lead time.
- Third shift and weekend without operators.
- 1 µm per click in radius adjustment executed by machine.

Pump Housing

**CHALLENGE****ROMICRON™ FINE BORING**

- Bore Ø 38,1mm (1,500").
- Tolerance range 18 µm.
- Cast iron.
- Interrupted cut at figure eight hole.

SOLUTION

- Romicron KM50SVS0B103M standard head.
- CPGW2151S0415C KB1645™.

CUTTING DATA

- v_c 197 m/min (646 SFM).
- f 0,05 mm/rev (0,002 IPR).

RESULT

- Tool life of 450 workpieces.
- Surface finish better than Ra 32 µm.
- Roundness better than 8 µm.

BENEFIT

- Secure finishing process with no oversized bores.
- Less adjustment effort.
- Amortisation in less than four months.
- Bore tolerance range of 18 µm easily and consistently achieved due to 1 µm per click in radius adjustment.

Wind Energy Housing

Multiple boring heads
based on KM63™ shank

Hole Finishing

KM™ FINE BORING

- Bearing seat Ø 2.700mm (106,3").
- Tolerance range 210 µm H7.
- Cast iron GGG40.
- Pull machining – spindle needs to adapt bridge inside workpiece.

CHALLENGE

SOLUTION

- Welded space frame bridge with KM coupling to adapt cutting units.
- One base bridge to adapt roughing, semi-finish and fine finish head.

CUTTING DATA

- v_c 240 m/min (787 SFM).
- f 0,28 mm/rev (0,011 IPR).

RESULT

- Customer proprietary information.

BENEFIT

- Machining in one workpiece results in a productivity increase.
- Investment saving as only one base bridge needed.
- Ease of use due to KM coupling for fast and accurate cutting unit change.

Wind Energy Housing

Multiple boring heads
based on KM63™ shank

CHALLENGE
KM™ FINE BORING

- Bearing seat Ø 3000mm (118,1").
- Tolerance range 210 µm H7.
- Ductile cast iron GGG40.
- Machining centre without coolant.
- Tolerance range 210 µm H7.

SOLUTION

- Welded space frame bridge with KM coupling to adapt cutting units.
- One base bridge to adapt roughing, semi-finish, and fine finish head.

CUTTING DATA

- v_c 240 m/min (787 SFM).
- f 0,28 mm/rev (0,011 IPR).

RESULT

- Customer proprietary information.

BENEFIT

- Investment saving as only one base bridge and KM cutting units are used for diameter 2.700mm and 3.000mm.
- Ease of use due to KM coupling for fast and accurate cutting unit change.

Wind Energy Housing

Hole Finishing

1 µm per click in
radius adjustment

ROMICRON™ FINE BORING

- Flange Ø 1260–1400mm (49,6–55,1").
- Tolerance range 125 µm H7.
- Cast iron GGG40.
- One base bridge for multiple diameters.
- Machining centre without coolant.

CHALLENGE

SOLUTION

- Romicron standard modular MF40 element with engineered-solution aluminium bridge.
- CPGT060204/08HP KC5410™.

CUTTING DATA

- v_c 200 m/min (650 SFM).
- f 0,12 mm/rev (0,005 IPR).

RESULT

- Tool life of 73 min.

BENEFIT

- Investment saving as only one base bridge needed.
- Use of standard off-the-shelf Romicron tool.
- Ease of use due to Romicron.

Synchronous Joint

Balanced by design

CHALLENGE
ROMICRON™ FINE BORING

- Pin machining Ø 13mm (0,512").
- Tolerance range 6 µm.
- Steel 42CrMo4 (4140).
- Machining centre with internal coolant.

SOLUTION

- Romicron standard HSK63ASVUBB1095MCLB head with engineered solution pin boring bar.
- TCMT110202FP KTP10™.

CUTTING DATA

- vc 160 m/min (525 SFM).
- f 0,1 mm/rev (0,004 IPR).

RESULT

- Tool life of 300–450 components per insert.
- Surface finish Ra 0,3 µm.
- Cpk value ≥ 1,33.

BENEFIT

- Use of standard off-the-shelf Romicron tooling.
- Bore tolerance of 6 µm consistently achieved due to 1 µm per click in radius adjustment.

Landing Gear

Feed out slide

Hole Finishing

MOTION TOOLING

- Bottle boring Ø 65–85,3mm (2,559–3,358").
- Steel 34CrNiMo6; 4340M.
- Generate complex rotationally symmetric shape inside pre-machined workpiece.
- Custom machining centre with internal coolant.

CHALLENGE

SOLUTION

- Motion tool with two slides activated by drawbar.
- Hole shape generated while tool is retracted.
- Engineered-solution insert to improve chip formation.

CUTTING DATA

- vc 31 m/min (102 SFM).
- f 0,20 mm/rev (0,008 IPR).

RESULT

- Customer proprietary information.

BENEFIT

- Time savings compared to previous boring bar.
- Bottle boring Ø 65–85,3mm (2,559–3,358").
- Steel 34CrNiMo6; 4340M.
- Generate complex rotationally symmetric shape.

Ream to the Extreme

The RHM™ Modular Reaming System offers performance levels commonly achieved with solid carbide reaming tools. With a unique, preloaded KST coupling, it is best suited to ream IT6 and IT7 high-quality holes in steel, stainless steel, and cast irons.

RHM offers you:

- A market-leading runout accuracy.
- A strong proprietary coupling that enables higher feed rates.
- Latest technology carbide and cermet grades for high cutting speeds and extended tool life.

Experience the advantages at your Authorised Kennametal Distributor or at www.kennametal.com.

www.kennametal.com.

 **KENNAMETAL®**

RMS™ Multiflute Reaming Tools

RMS™ Multiflute Reaming Tools achieve highest metal removal rates from diameter 5–14mm with no customisation. All standard reamers are ground to an ISO H7 tolerance class hole to address most common applications. Specific coatings and lead configurations enable high-speed machining of steel, stainless steel, cast iron, and non-ferrous materials at accelerated speeds.

Primary Application

Use standard SIF™ Steerable Hydraulic Chucks or SIF Adaptors for easy compensation of radial runout and angular inaccuracies of the spindle to achieve the highest possible hole straightness and surface quality.

Features and Benefits

Higher Productivity and Profitability

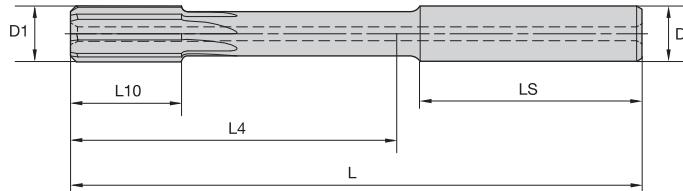

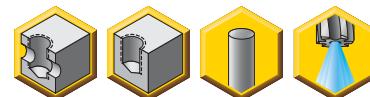

- Longer tool life with increased hole and surface quality due to lapped ground leads.
- Highest metal removal rate at higher speeds and feeds due to reaming-specific grades and substrates.
- Improved straightness and cylindrical form compared to competitive tools and reduced vibration tendency due to unequal flutes.
- All RMS reamers offer internal coolant supply.

Customisation

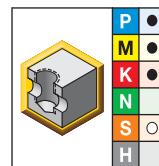

- Diameters 1,40–14,15mm available with and without internal coolant in 0,001mm steps.
- Intermediate diameters of standard program available as Simple Specials with short delivery time.
- Solid cermet reaming tools and tooling for heat-resistant materials are available on request.

- For hole tolerance H7.
- Intermediate sizes ground to achieve IT7 hole tolerance class available.
- Starting with Ø 10mm in IT6 hole tolerance available.

RMB™ Multiflute Reaming

The RMB Multiflute Reaming System achieves solid carbide and solid cermet metal removal rates from 14–20mm with no customisation required. All standard reamers are ground to an ISO H7 tolerance class hole to address most applications, giving you an economical solution for large diameter sizes compared to solid carbide reamers. Specific coatings and lead configurations enable high-speed machining of steel, stainless steel, cast iron, and non-ferrous materials at accelerated speeds.

Primary Application

Use SIF™ Steerable Hydraulic Chucks or SIF Adaptors for easy compensation of radial runout and angular inaccuracies of the spindle to achieve the highest possible hole straightness and surface quality.

Features and Benefits

Higher Productivity and Profitability

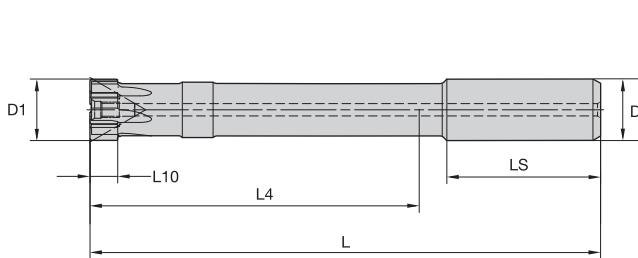

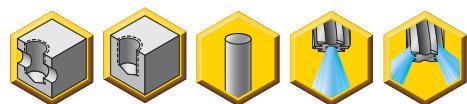

- Longer tool life with increased hole and surface quality due to lapped ground leads.
- Highest metal removal rate at higher speeds and feeds due to reaming specific grades and substrates.
- Improved straightness and cylindrical form compared to competitive tools and reduced vibration tendency due to unequal flutes.
- Adjustment screw at straight-fluted RMB reamers to change internal coolant supply from axial to radial.

Customisation

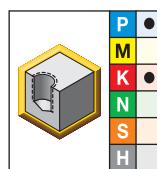

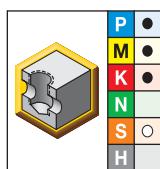

- Diameters up to 50mm available with and without internal coolant in 0,001mm steps.
- Intermediate diameters of standard program available as Simple Specials with short delivery time.
- RMB tooling for machining heat-resistant materials is available on request.

- For hole tolerance H7.
- Intermediate sizes ground to achieve IT6 or IT7 hole tolerance class available.
- Adjustment screw to change internal coolant supply from axial to radial.

RHM™ Modular Reaming System

The RHM Modular Reaming System achieves solid reamer metal removal rates from diameter 14–50mm with no customisation required. All standard reamer heads are ground to achieve an ISO H7 tolerance class addressing most applications. This system gives you fast and easy change of heads using axial actuation toolholders, and replaceable heads eliminate the need for repeating runout check. Specific coatings and lead configurations enable high-speed machining of steel, stainless steel, cast iron, and non-ferrous materials at accelerated speeds.

Primary Application

Use SIF™ Steerable Hydraulic Chucks or SIF Adaptors for easy compensation of radial runout and angular inaccuracies of the spindle to achieve the highest possible hole straightness and surface quality.
Radial or axial actuation tool bodies are available at diameter 20mm.

Features and Benefits

Taper-Face Contact with KST Coupling

- Symmetrical torque transmission near head.
- Higher feed rate than conventional reaming tools.
- Better surface quality and tool life due to less tendency to vibrate.
- No need for head to body orientation.

Higher Productivity and Profitability

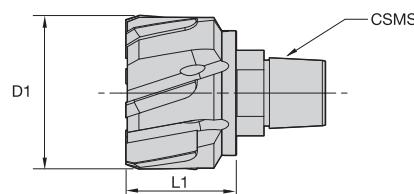

- Longer tool life with increased hole and surface quality due to lapped ground leads.
- Highest metal removal rate at higher speeds and feeds due to reaming specific grades and substrates.
- Improved straightness and cylindrical form compared to competitive tools and reduced vibration tendency due to unequal flutes.

Customisation

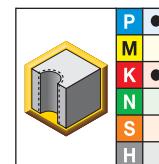

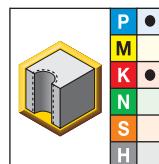

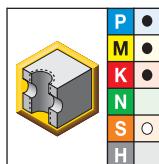

- Diameters up to 50mm available with and without internal coolant in 1 µm steps.
- Intermediate diameters of standard program available with short delivery time.
- RHM tooling for machining heat-resistant materials, as well as different lengths and couplings or shanks, available on request.

- For hole tolerance H7.
- Intermediate sizes ground to achieve IT6 or IT7 hole tolerance class available.
- Please order screw for axial use or pull stud separately.

Basic Design Overview • Multiflute Reaming Tooling

Kennametal offers two basic reaming designs, cylindrical margin land and up sharp. The cylindrical margin land design is used for all standard items of the RMS™, RMB™, and RHM™ reaming platforms. Engineered-solution tooling based on up sharp reaming design offers high hole quality and long tool life in exotic cases and high-temp alloys as only the sharp cutting edges contact with the workpiece.

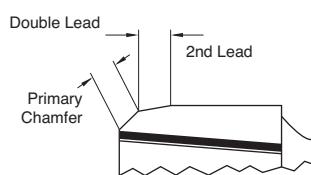

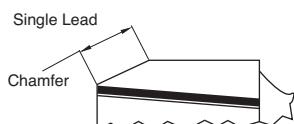

Cylindrical Margin Reaming "C"

Up Sharp Reaming "U" & "NC"

Basic Lead Differences

Single Lead

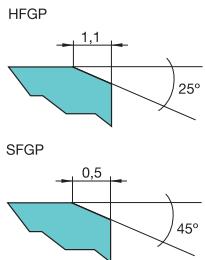

The single lead chamfer design is used with all standard RMS, RMB, and RHM reaming tooling and enables the tool to be applied on various materials without customization. Design can be modified to meet specific applications such as thin walls, straightness correction, etc.

Double Lead

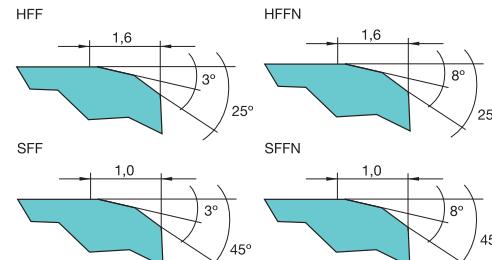

Double lead designs are available as engineered solutions and enable higher surface quality and feed rates in general. Lead dimensions require customisation regarding the material to be machined for best machining results.

Lead Design Overview

RIQ™ Quattro Cut™ and RIR™ Padded Reamers

Primary Application

Master the highest precision reaming applications with standard inserts in almost all materials with two unique systems available: RIR for small diameter and RIQ for easy setup in larger diameters.

The RIQ reamers are available starting at diameter 16mm with four edges for lowest cost per hole. They contain a proprietary pocket seat only requiring setup of the diameter, which is a huge benefit in terms of simplicity over other systems that require the diameter and back taper to be adjusted simultaneously. The RIR padded reamers are also proprietary and are available starting at diameter 6mm with two edges.

Features and Benefits

Higher Productivity and Profitability

- Higher tool life with Kennametal grades.
- User friendly — RIQ padded reamers reduce setup time.
- Make use of four full edges even in PCD or PCBN when using RIQ inserts.

Complete Insert Portfolio

- Large offering of available lead geometries — E13, EDS, EGU, EKS, radius, and taper inserts.
- Large offering of grades — coated and uncoated carbide, cermet, PCBN, and PCD.

Customisation

- All RIQ tooling is engineered according to your specific needs in diameters 16–350mm with internal coolant.
- All RIR tooling is engineered according to your specific needs in diameters 6–350mm with internal coolant.
- RIR taper reamer for cone-shaped holes is available on request.
- Multiflute and step reaming applications and special blade shapes are available upon request.
- Necessary measuring and adjustment equipment is available as standard.

Hole Finishing

Application recommendation	RIR	RIQ
Pocket seat	Flat with clamping groove in blade.	Serrated. Greater insert stability.
Cutting edges	2 (1 with PCD or CBN and 1 within diameter range 6–8mm)	4 (Including PCD, CBN, and cermet)
Special blade forms	yes	yes
Multiple insets on diameter	no	yes
Blade adjustment	Diameter and back taper.	Diameter only, back taper preset.
Blade adjusting screws	2	1
Number of insert sizes	5	3
Chamfer or seat machining	Possible, but adjustment required on length and angle.	Yes. Angle preset into body. Minimal adjustment for length.
General comments	Requires end users to be familiar with adjusting single blade reamers. High accuracy for single or multiple diameters.	Requires end users not to be familiar with typical adjusting single blade padded reamers. Complex multidiameter bores with chamfers and leads between bores. Multidiameter for high accuracy and higher productivity (feed rate).

Micro-Finishing Tool

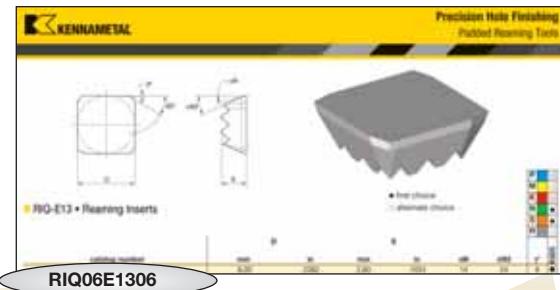

Valve Seat Tool

Tool for Differential Housing

Blade Identification System

The RIR and RIQ blade part numbers are made up of 10 numbers selected from 5 categories. The first three digits indicate the reamer type, the next two digits are determined by reamer size, and the balance of the numbers allow specific blade configurations and grades.

Basic Principle

Kennametal's padded reaming tools follow two basic rules. The result, perfectly cylindrical bores with exceptional straightness and superior surface finishes combined with a bore diameter tolerance held to microns:

1. A SINGLE-POINT BORING TOOL SUPPORTED BY BEARING PADS, FLOATING ON A COOLANT FILM.
2. A TOOL MUST DEFLECT ONTO THE PADS, ON ENTERING THE HOLE, IN ORDER TO OBTAIN THE CORRECT SIZE.

Each padded reamer hosts a selection of guide pads that are positioned to resist the cutting forces created during machining. A minimum of two guide pads are necessary guiding the reamer in the predrilled hole.

The lubricant, in the form of coolant, gets between the pad and component surface, resulting in frictionless stability during cutting.

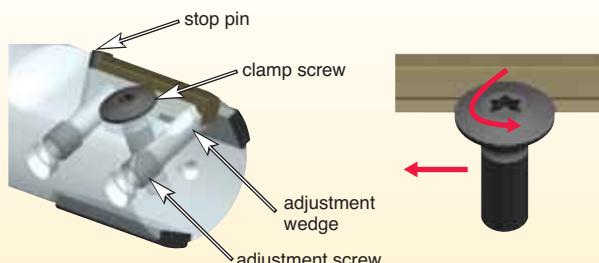

● first choice		○ alternate choice					
material	P	M	K	N	S	H	MQL
carbide	●	○	●	●		○	
cermet	●	○	●			○	
ceramic			●		●		
PCD			○		●		●

Guide pads are ground slightly smaller than the targeted diameter to machine a certain overhang between guide pads and insert cutting edge necessary for the machining process. Most common is a 10 µm overhang but can vary depending on the material to be cut.

As padded reamers are specifically ground, relative to diameter and tolerance, guide pads are not flexible or adjustable. The pad below the insert ensures hole roundness while the pad opposite to the insert defines the bore diameter. Each further pad improves the roundness, straightness, and bridges over interruptions in the bore area.

These carbide, cermet, PCD, and ceramic guide pads are selected and brazed or bonded to the body depending on coolant availability/type and abrasiveness of the material to be cut. Especially with high L/D ratio tooling (e.g., cam and crank boring bars), bonding of guide pads offers higher precision due to less thermal influence to the steel base body.

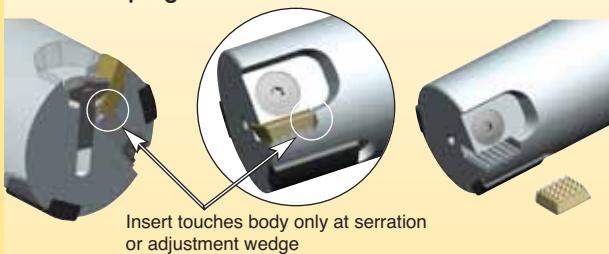

RIR Clamping

RIR reaming inserts are clamped by a single screw to avoid weakening of the pocket seat against common clamping wedges. This clamp screw has a left-hand thread to securely move the insert axially towards the stop pin until the insert aligns there. The stop pin ensures correct advancement of cutting insert to guiding pad.

Like other types of padded reamers using rectangular reaming inserts, two adjustment screws and wedges are required to adjust diameter and back taper accurately. Therefore, RIR is the preferred solution for diameters below RIQ range.

RIQ Clamping

There is no need to adjust back taper as this is already predefined by the serrations. Only the overhang of the cutting edge, relative to the guide pads, needs to be adjusted.

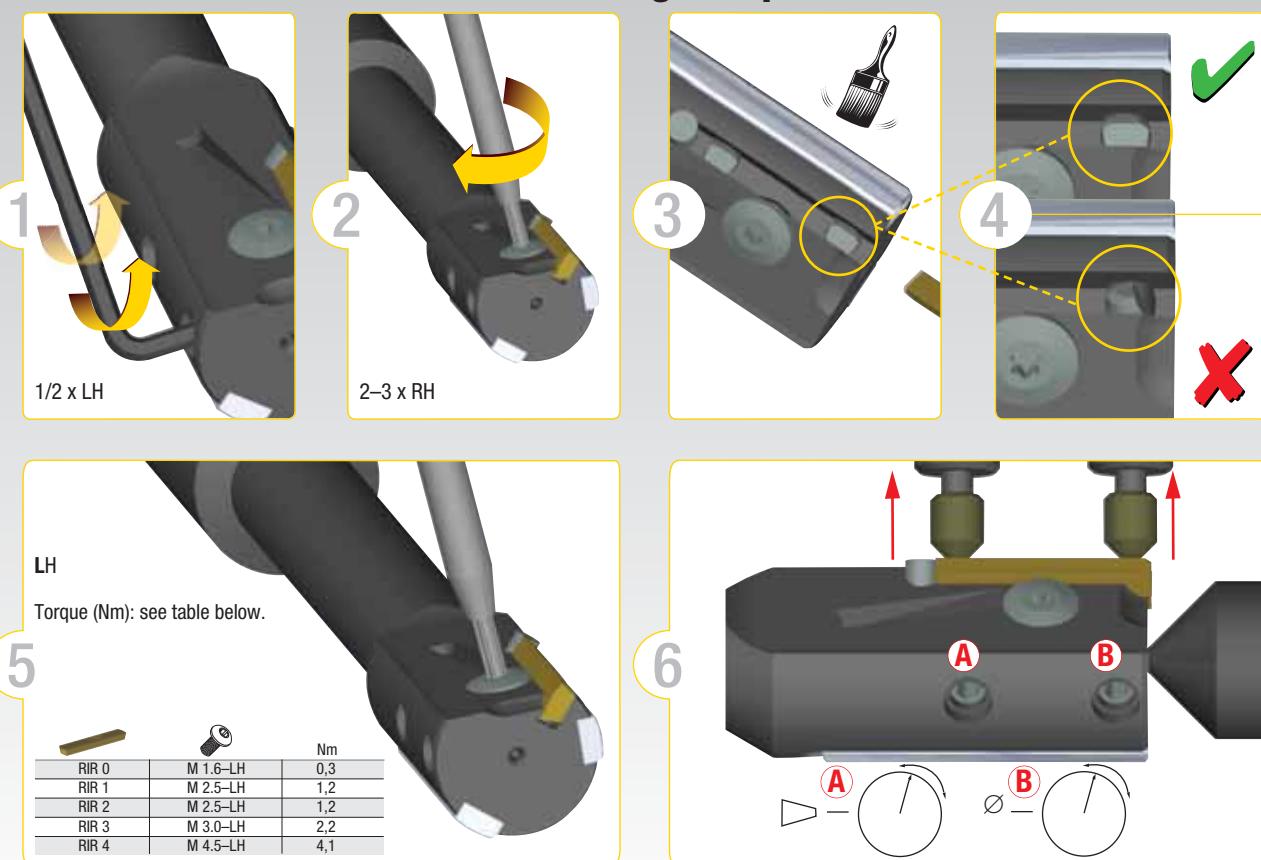

The right-hand clamp screw locks the insert securely onto the high-precision serration. The three cutting edges that are not in use are completely covered by the body while not touching them. All four cutting edges of full-face CBN and PCD inserts can be completely used without the danger of accidentally losing one of them.

Adjustment Wedge and Screw

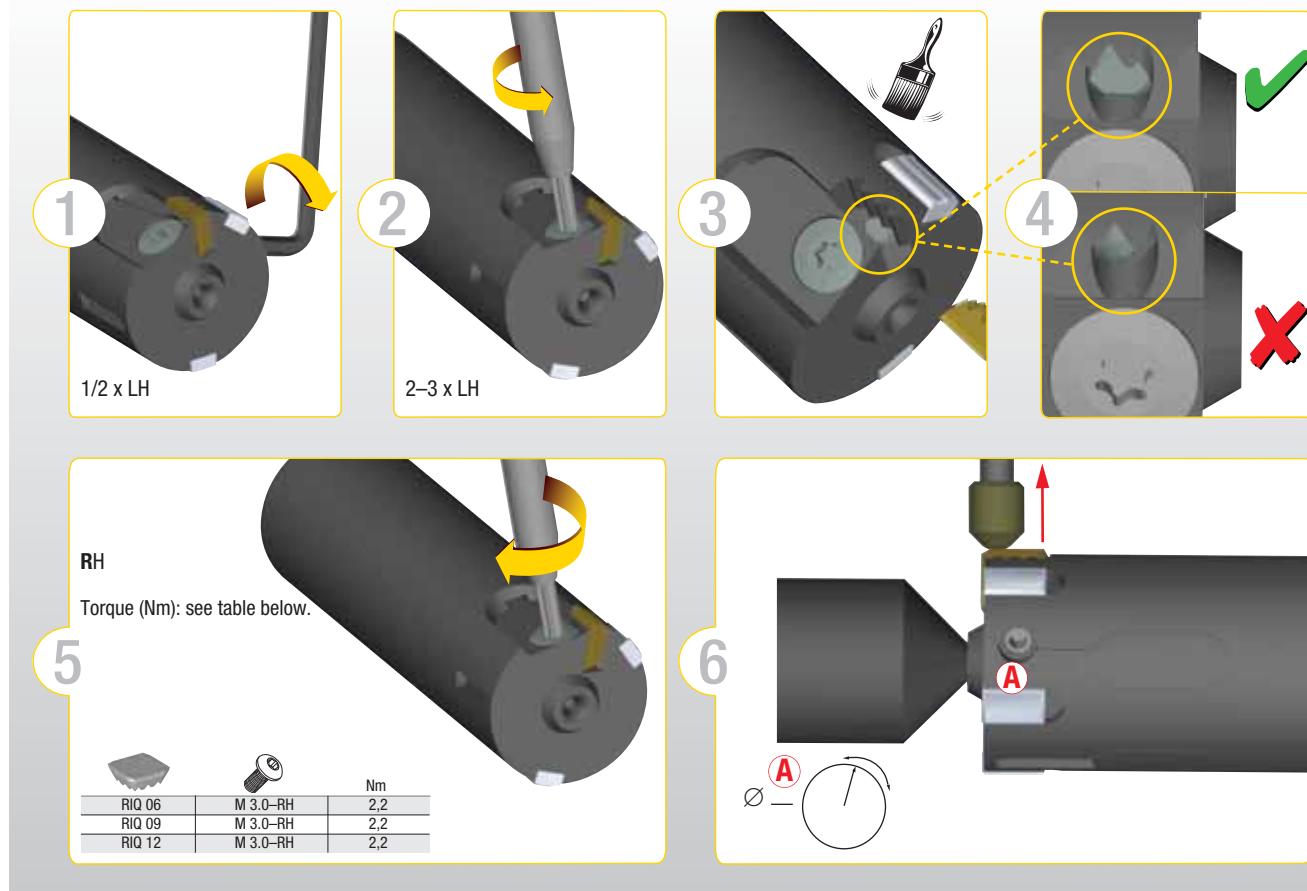

The proprietary adjustment wedge prevents any unpredictable rotation. This avoids errors during setup that cause tool damages.

RIR Tooling Setup

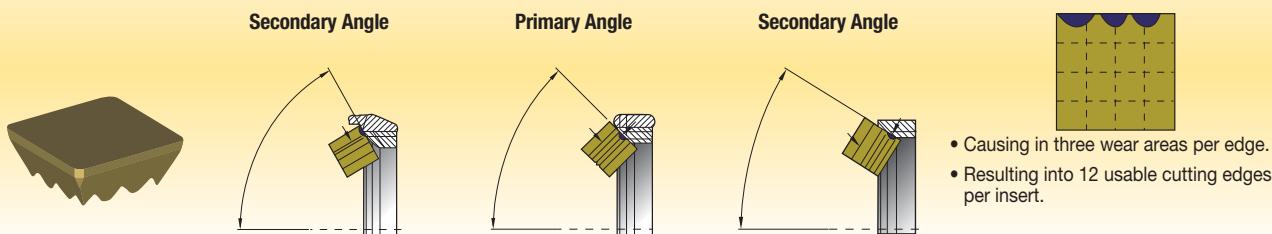

RIQ Tooling Setup

Valve Seat Tools • RIQ™ Quattro Cut™ Based Tooling

RIQ technology enables bypassing any angular adjustment of the insert and provides up to 12 cutting edges.

Valve Seat Tools • Machining Centre Solutions

RIQ valve seat tooling with integrated hydraulic chuck to clamp multiflute RMS™ or RIR™ guide pad reamer.

Machining Centre • Integrated Hydraulic Chuck

RMS Multiflute Reamer
for regular runout accuracy of valve seat
to value guide demands

RIR Guide Pad Reamer
for highest runout accuracy of valve seat
to value guide demands

Machining Centre Process • All Angles Formed to Finish Specifications in TWO Passes

Process A (Preferred)

Tool 1 • Semi-Finish:

- Finish of secondary angles.
- Semi-finish of primary angles.
- Create pilot bore (short version of RMS or RIR reamer).

Tool 2 • Finish:

- Finish of primary angles.
- Finish of guide bore (short version of RMS or RIR reamer).

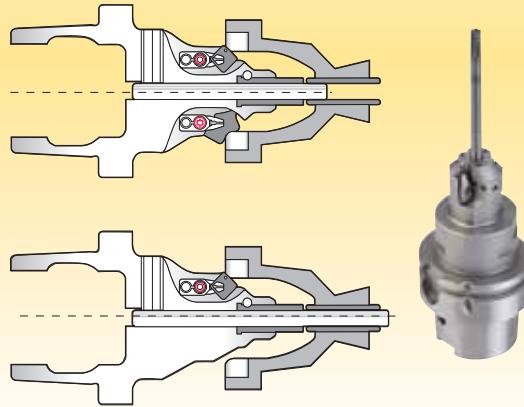

Process B (Alternate)

Tool 1 • Finish Valve Seat:

- Finish of primary and secondary angles.
- Create pilot bore (short version of RMS or RIR reamer).

Tool 2 • Finish Valve Guide:

- Finish of guide bore (short version of RMS or RIR reamer).

Valve Seat Tools • Transfer Line Solutions

RIQ valve seat tooling with carbide bushing guiding RMS or RIR reamer machining the valve guide on transfer lines.

Transfer Line • Integrated Carbide Bushing

Multiflute Reamer RMS
for regular runout accuracy of valve seat
to value guide demands

RIR Guide Pad Reamer
for highest runout accuracy of valve seat
to value guide demands

Transfer Line Process • All Angles Formed to Finish Specifications in ONE Pass

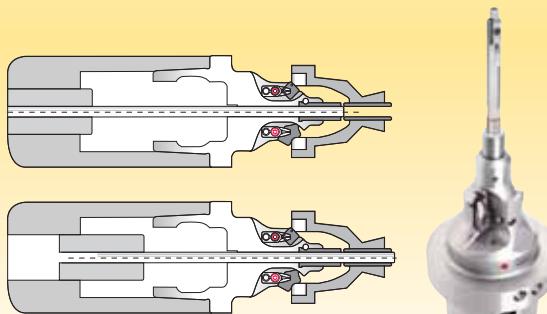

Process A (Preferred)

Tool 1 • Semi-Finish:

- Semi-finish of secondary angles.
- Semi-finish of primary angles.

Tool 2 • Finish:

- Finish of primary angles.
- Finish of secondary angles.
- Finish of guide bore with feed out multiflute or guide pad reamer (squirt-through type).

Process B (Alternate)

Tool 1 • Semi-Finish and Finish Combined:

- Finish of primary and secondary seat angles.
- Finish of guide bore with feed out multiflute or guide pad reamer (squirt-through type).

20,00–50,00	0,20	0,30	0,40

Causes of and Remedies for Reaming Problems

problem	cause	possible remedy
Drill diameter too large	 <p>1. Reaming tool running out-of-centre. 2. Concentricity of pilot hole and ream machining unsatisfactory. 3. Built-up edge. 4. Unsuitable cooling lubricant. 5. Reaming tool Ø too large.</p>	<ul style="list-style-type: none"> • Use SIF™ equalising adaptor. • Re-align, use floating head. • Change cooling lubricant. • Change cutting speed. • Measure reamers and send for repairs.
Drill diameter too small	 <p>1. Reamer worn. 2. Unsuitable cooling lubricant. 3. Reaming allowance too small.</p>	<ul style="list-style-type: none"> • Replace and refit tool. • Change cooling lubricant. • Increase reaming allowance.
Conical drill profile wider towards drill runout	 <p>1. Concentricity of pilot hole and reaming unsatisfactory. 2. Positioning accuracy of pilot hole to reaming.</p>	<ul style="list-style-type: none"> • Re-align, use SIF equalising adaptor. • Correct positioning accuracy.
Conical drill profile wider at drill entry point	 <p>1. Concentricity of pilot hole and reaming unsatisfactory. 2. Reaming tool skim cutting with ledger.</p>	<ul style="list-style-type: none"> • Re-align, use floating head. • Securely clamp reaming tool axially.
Hole out-of-center and/or showing chatter marks	 <p>1. Reaming tool running out-of-centre. 2. Slanted cutting surface/asymmetrical cutting. 3. Workpiece twisted.</p>	<ul style="list-style-type: none"> • Use SIF equalising adaptor. • Flatten surface before drilling or reaming. • Take the direction of impact into account when clamping the workpiece.
Surface quality does not meet specification	 <p>1. Tool cutters worn. 2. Reaming tool running out-of-centre. 3. Incorrect technology data (cutting parameters). 4. Inadequate chip evacuation.</p>	<ul style="list-style-type: none"> • Replace and refit tool. • Use SIF equalising adaptor. • Change cutting parameters in machining range. • Optimise coolant supply; increase coolant pressure and volume.
Feed grooves	 <p>1. Built-up edge.</p>	<ul style="list-style-type: none"> • Change cooling lubricant. • Change cutting speed.

SIF™ Steerable Toolholder

Primary Application

SIF Steerable Toolholders should be used for easy compensation of radial runout and angular inaccuracies caused by the machine spindle or gravity. SIF tooling improves hole roundness for highest possible hole straightness and surface quality. Runout-optimised reaming tools provide higher process stability and longer tool life.

Use a separate SIF tooling package for each machine to ensure best configuration between reaming tool and spindle and HSK bushes for faster tool change to avoid repeating adjustments.

Features and Benefits

Higher Productivity and Profitability

- Easy compensation of radial runout and angular inaccuracies increases process control and tool life.
- Less time-consuming adjustment due to eight radial screws.
- Increase stability due to fewer interfaces by use of RIQ™ Quattro Cut™, RIR™, and RHM™ reaming tooling with SIF backend.

Versatility

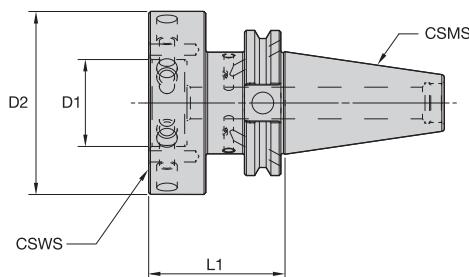

- Standard DV, BT, CV, and HSK adaptors can be used in combination with SIF hydraulic chucks for most precise concentric clamping, highest accuracy, and flexible clamping method using hydraulic chuck sleeves.
- HSK bushes with SIF coupling enables fast tool exchange and eliminates the need for repeated runout adjustment, reducing downtime.

Customisation

- Different length versions and coupling size combinations are available.

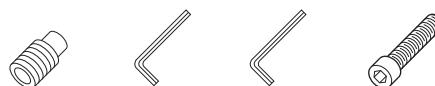

- Through-the-toolholder coolant capability – form AD or form B.
- Suitable for SIF adaptors.

SIF Tooling Setup

Step 1: Rough setup of runout at flange

- Set gage (TIR) at SIF flange.
- Tight axial clamping screws 6–8 Nm.
- Use radial adjustment screws to achieve 5 μm runout.

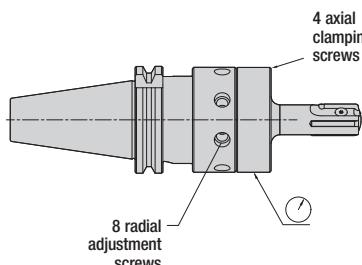

1

Step 2: Fine setup of runout at flange

- Tight axial clamping screws crosswise:
SIF70/80 18 Nm.
SIF100 32 Nm.
- Use radial adjustment screws to achieve 2 μm runout.
- All radial adjustment screws to be clamped tight at 4 Nm.

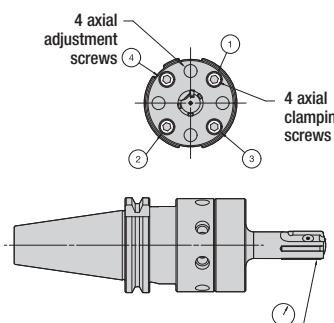

2

Step 3: Adjustment of runout at front

- Set gage (TIR) at control grind, cylindrical land, or guide pads.
- Use axial adjustment screws to achieve a maximum runout error of 2 μm .
- All axial adjustment screws to be clamped tight at 4 Nm.

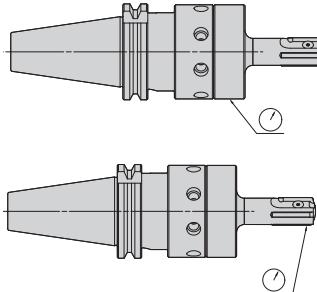

3

Step 4: Final runout check

- Check using gage (TIR) at flange; no deviation by theory.
- If needed, use radial adjustment screws to set runout below 2 μm .
- Any modification of radial setup demands an axial runout check and adjustment, if necessary.

4

PCD Customised Tooling

PCD tooling offers the highest productivity and accuracy, reduced tooling costs due to long tool life, and secure process control due to close tolerances, increasing your overall quality and reducing scrap rate and inspection costs.

Primary Application

Use Kennametal PCD tooling for machining aluminium and aluminium alloys, magnesium, copper, brass, bronze, plastics (GFRP, CFRP), MMC (Metal Matrix Composite), graphite, tungsten carbide green-stages, and ceramic. Choose from various standardised PCD product platforms for drilling, counterboring, and reaming. Steel- and solid carbide-based tool body designs are available for direct spindle coupling with or without adjustable PCD pocket seats or with steerable SIF™ backend.

Features and Benefits

Higher Productivity and Profitability

- Highest chip removal rates and less tool changes by using multistep tooling.
- Extremely long tool life even when maintaining very tight tolerances.
- Reduced built-up edge and burr formation, improved concentric hole shape with multistep tooling, and less influence on surface microstructure of the workpiece.

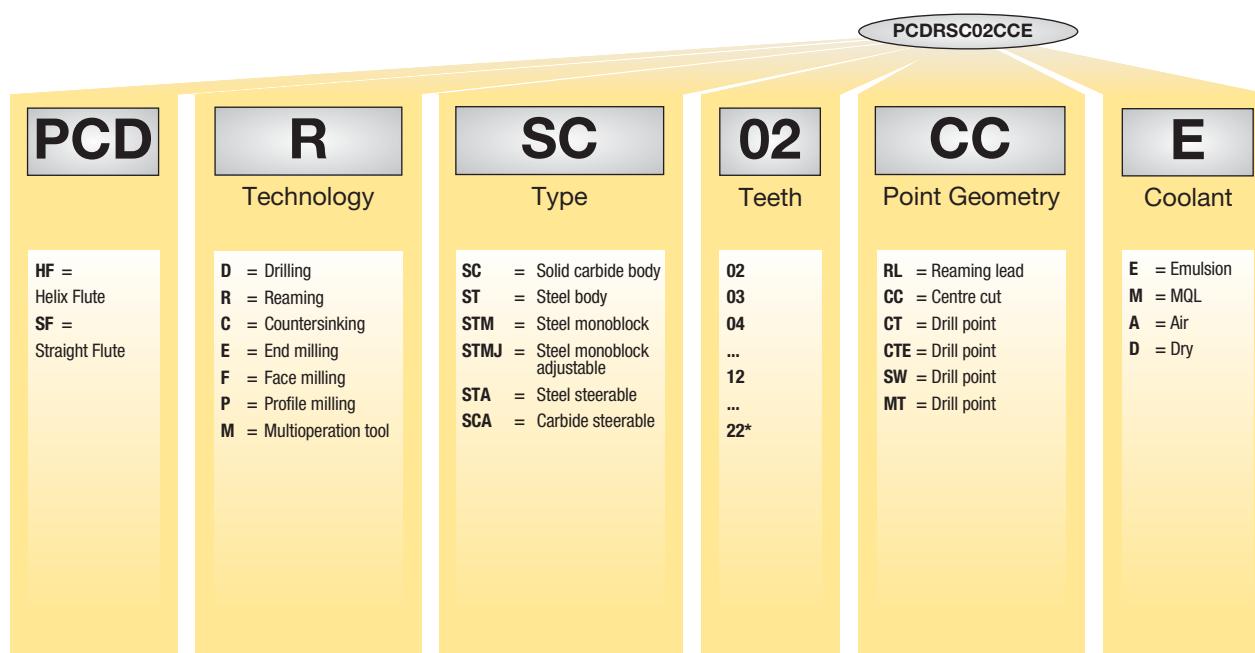

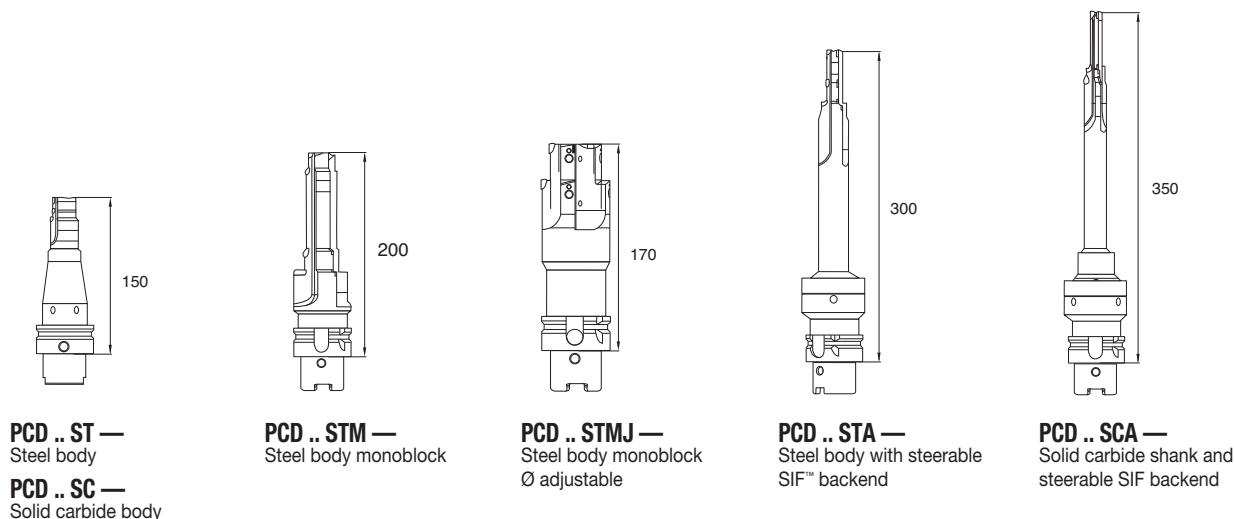

Product Platform Versatility

- All PCD drilling, counterboring, and reaming tools are engineered according to your specific needs in diameter, shape, radii, and steps.
- Various PCD grades are available to match your specific material.
- Multistep drilling, profiling, countersinking, and reaming platforms available.
- Coolant channel design for optimised chip evacuation with regular and MQL.
- Steel-based tool body designs are available for direct spindle coupling or enable adjustable pocket seat design for highest accuracy even at larger sizes.
- Carbide-based tool bodies enable highest accuracy and tool life at high L/D ratio applications.
- Tooling designs with SIF steerable interface optimises runout and enables highest accuracy and tool life.
- All PCD tooling is prebalanced by design. Further precision balancing is available on request.

PCD Tooling Basic Design Overview

Kennametal offers you certain PCD design platforms to optimally fulfill your machining task. These basic designs are independent, whether you are drilling, countersinking, profiling, reaming, or milling. All tooling designs are capable of internal coolant, MQL coolant, and are balanced by design.

* Exception for Type Reamer 22 = 2 teeth + 2 additional land = 4 guiding lands.

Runout of the Spindle

Depending on spindle runout and/or higher L/D ratios

runout < = 0,005mm	runout > = 0,006mm
	PCD-ST PCD-SC

PCD Drill-Point Design Overview

CT

- PCD corner tipped.
- Carbide-based body design.
- Diameter >4,2mm.

Use for general application at moderate cutting speeds up to 12 x D drilling depth.

CTE

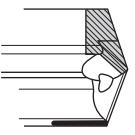

- PCD corner tipped, E point.
- Carbide-based body design.
- Diameter >4,2mm.

Use at precasted holes at moderate cutting speeds up to 12 x D drilling depth.

SW

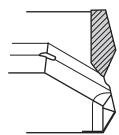

- Full-face sandwich PCD.
- Carbide-based body design.
- Diameter >5mm.

Use at high cutting speeds and abrasive materials up to 5 x D drilling depth.

MT

- PCD corner tipped.
- Steel- and carbide-based body design.
- Diameter >12mm.

Use for drilling casted surfaces up to 3 x D drilling depth.

Romicron™ Fine-Boring System

Primary Application

The Romicron PCD tooling portfolio has a diameter range of 4–213mm and reduces setup time and scrap rates while increasing your overall equipment efficiency. This premium fine-boring system can be used in most materials commonly found in metalcutting environments by applying the latest Kennametal Standard ISO Turning Inserts. Its closed loop boring (CLB) provides a unique possibility to automate the insert wear compensation with minimal investment due to the precise 2 µm diameter adjustment per increment. Romicron should be used where extremely close tolerances are critical to the overall process or where fast and easy diameter adjustments are needed.

Features and Benefits

Higher Productivity and Profitability

- Reduce scrap rates and setup time due to the backlash-free adjustment.
- Make use of the entire tool life of used inserts as diameter adjustment can be done inside of the machine, avoiding routine insert changes in the setup room.
- Avoid time-consuming control cuts or sister tooling.
- No training or experience is needed, resulting in less stress during adjustments.

Versatility

- Retrofit existing machines to automated wear compensation using the standard CLB pin without any electronic equipment needed besides a measuring device of holes produced.
- Use SVS00B-SVS6B prebalanced heads as the preferred solution for diameter 25–139mm.
- SVUBB1 tooling for high-speed applications 4–16,5mm.
- Large diameter range of 6–100mm using SVUBB2 tooling.
- SVU65 and SVU92 for larger diameters of 71–213mm.

Ease of Adjustment

- No tools are needed so adjustment can take place on the machine tool. Eliminates the need to remove and return the boring head to the presetting area providing increased productivity.
- SEE, FEEL, and HEAR the adjustment mechanism for fail-safe size control.

Customisation

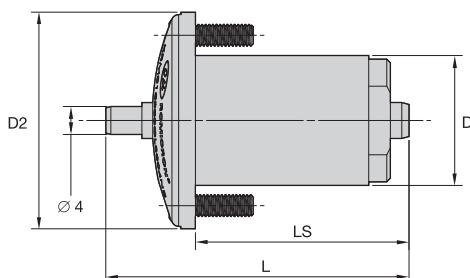

- Engineered solutions available for multistep or high length-to-diameter tooling.
- Anti-chatter devices and various non-standard machine spindle coupling sizes are available.

Boring range, coolant capacity, and maximum RPM features for all Romicron boring heads.

Mounting Dimensions of the Romicron CLB Pin

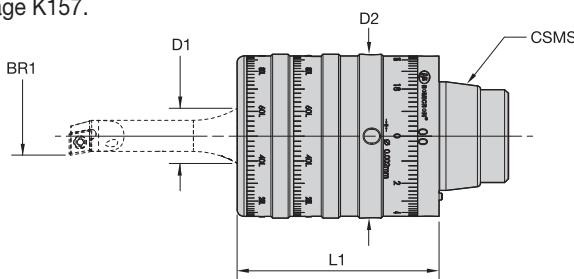

The Romicron Closed Loop Boring Process

Closed Loop Boring (CLB) provides the unique possibility to automate the insert wear compensation with minimal investment due to the precise 2 µm adjustment in diameter of these tools per increment. Retrofit existing machines to automated wear compensation using the standard CLB pin without any electronic equipment needed besides a measuring device of holes produced.

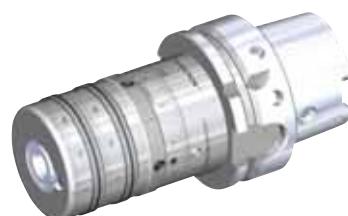

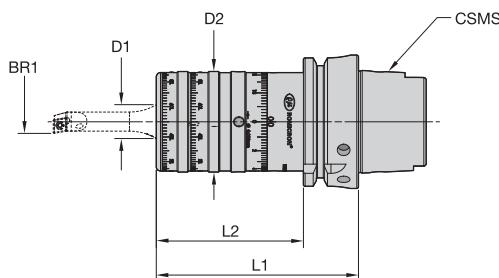

- For correct balance ring settings, see page K164.
- Order boring bar separately; see page K145.
- Order taper shank separately; see page K157.

Romicron Assembly Instructions

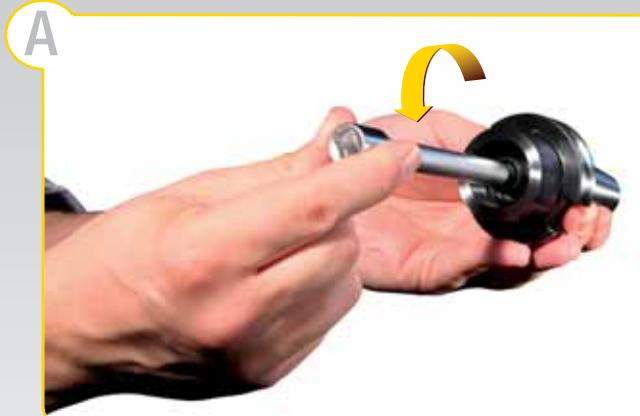

The required parts for the adaptor assembly are identified on Figures 1 and 2. The SVS model is shown. The instructions are also valid to the SVU and SVUBB models

**WARNING:**

Before starting the assembly procedure, ensure that all surfaces to be assembled together are free of dirt and completely clean.

Figure 2 – Assembled Tool

A. Remove the Differential Connector (5) from the Taper Shank (2).

B. Lubricate the thread on the Differential Connector (5) with Lubricant ASL-3G (7), supplied with the Taper Shank (2).

C. Screw the Differential Connector (5) into the rear thread on the Boring Head (1) until the end of the thread. At this time it is not necessary to tighten the Differential Connector (5). Remember that the Differential Connector (5) has two different screws, so there is no way to assemble the wrong side

Romicron Assembly Instructions

D

D. Screw the front end of the Taper Shank (2) onto the Differential Connector (5), now located at the back on the Boring Head (1). Screw carefully until the Positioning Pin (6) gently touches the Taper (2) face. Stop!

F

F. Insert the square end of the Extension (3) through the Taper Shank (2) and into the Differential Connector (5). Keeping the Positioning Pin (6) and the positioning slot aligned, turn the Extensions (3) counter-clockwise until you see that two Romicron faces are meshing. Ensure that the Positioning Pin (6) is inserted into the slot on the Taper Shank (2).

E

E. Unscrew the Taper Shank (2) a little bit until the Positioning Pin (6) is aligned with the positioning slot mark in the Taper Shank (2) face.

G

G. Tighten the Differential Connector (5) with the specified required torque, as shown on the table below. Use the Torque Wrench (4) to do this.

Tightening Torque Specifications

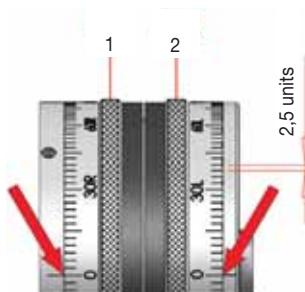

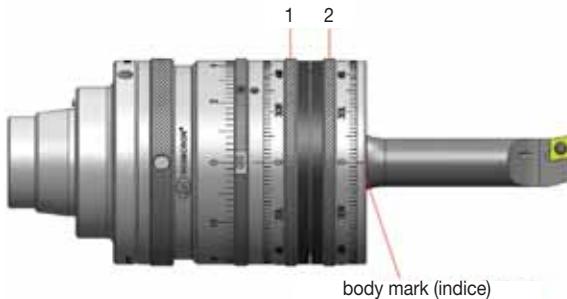

joint size	Torque Nm	drive square
KR32	30	3/8"
KR50	40	3/8"
KR63	55	1/2"
KR80	65	1/2"

Following these procedures will result in a rigid surface contact between the taper and the boring head face.

1. The balancing dials are identified on the figure below.

2. Ensure that the zero mark of dial 02 is coincident with Romicron Body Mark, and the zero mark dial 01 is coincident with the zero mark on dial 02.

3. Read the position values of the dials 01 and 02 on the table. For example, to machine a 10mm diameter, the positions are 01 = 24R and 02 = 22R.

(continued)

(Balancing Table • SVU-BB1 Boring Head continued)

4. The dial 01 must be positioned first. Moving the dial, adjust the position of dial 01. Use the mark reference located on dial 02. The dial resolution is 2 units of table values.

5. Now adjust the position for dial 02. Use the mark reference located on the Romicron body. After the adjustment of dial 02, the Romicron is correctly balanced.

(Balancing Table • SVU-BB2 Boring Head continued)

4. The dial 01 must be positioned first. Moving the dial, adjust the position of dial 01. Use the mark reference located on dial 02. The dial resolution is 2 units of table values.

5. Now adjust the position for dial 02. Use the mark reference located on the Romicron body. After the adjustment of dial 02, the Romicron is correctly balanced.

■ Balancing Table • SVU-65 Boring Head

1. The balancing dial 01 is identified on the figure below. The dial resolution is 2,5 units of table values.

2. Read the position value of the dial 01 on the table. For example, to machine a 76,2 mm diameter, the position is 01 = 22,5 L.

3. By moving dial 01, adjust its position, observing its proper reference mark, according to the read value.

■ Balancing Table • SVU-92 Boring Head

1. The balancing dial 01 is identified on the figure below. The dial resolution is 2,0 units of table values.

2. Read the position value of the dial 01 on the table. For example, to machine a 76,2 mm diameter, the position is 01 = 22,5 L.

3. By moving dial 01, adjust its position, observing its proper reference mark, according to the read value.

The EDGE to PERFORM

Multicron Fine-Boring Tooling

Multiple edges allow respective increase of feed rate to increase productivity and metal removal rate (MRR).

- Engineered solutions are available starting at diameter 78mm with two independent adjustable Romicron™ edges.
- Combination of semi-finishing and finishing cutting operations in one tool are also possible.
- Romicron edges can be set up independently and adjusted to compensate for insert wear with one central dial to enable CLB as well.

Experience the advantages at your Authorised Kennametal Distributor or at www.kennametal.com.

www.kennametal.com

 KENNAMETAL®

ModBORE™

One system from highly flexible roughing and fine-boring heads to large bridge tooling with optimum amount of tooling components.

Primary Application

This premium boring line enables rough to fine-boring operations using one system with a large diameter range from 9,75–2.205mm. ModBORE can be used in most materials commonly found in the metalcutting environment by applying the latest technology in Kennametal Standard ISO Turning Inserts.

Features and Benefits

Complete System

- Twin blade heads for roughing to semi-finishing operations starting from diameter 23,5mm.
- Fine-boring heads for finishing for diameters 9,75–2.205mm.
- Bridge tooling for large diameters up to 2.205mm standard with both roughing and fine-finishing heads.
- Through-coolant capability in all series.

Resolution

- Fine adjustable roughing heads.
- 0,01mm diameter adjustment respective 2 µm with easy-to-read large vernier scale with fine-boring heads.

Product Variety

- KM™ shanks for adaptation to all spindles via respective adaptors.
- HSK shanks for direct adaptation.
- Inch shanks as most economic variant for adaptation via respective adaptors.

Customisation

- Engineered solutions available.
- Anti-chatter devices available.
- Cartridges can be designed into standard boring heads for added versatility.

ModBORE™ Fine-Boring System

Based on KM™, HSK, and inch SSF couplings, match all spindle specifications direct or indirect via adaptors. The ModBORE Fine-Boring System utilises standard ISO/ANSI turning inserts for maximum performance and flexibility.

RBHT • Twin Cutters for Rough and Semi-Finish Boring

- Diameters 23,5–153mm.
- KM, HSK, and inch straight shank back end versions available.
- Special preloaded serration and ground support face ensures very stable connection, minimises cutting vibration, and maximises position accuracy while enabling easy diameter adjustment.
- Large selection of blades sets:
 - Staggered — efficient machining of large depths of cut.
 - 70° — for challenging applications requiring stable corner radii and full utilisation of inserts.
 - 90° — most precise machining results.
- Generous clearance and through coolant enables free chip flow and improves tool life.
- All insert holders allow positive standard turning inserts for lowest cutting forces. Starting with diameter 65,5mm, additional insert holders for negative standard turning inserts enable even higher feed rates for maximum metal removal rates.

FBHO • Offset Boring Bar Heads for Fine Finish

- Diameters 9,75–88,1mm.
- KM, HSK, and inch straight shank back end versions available.
- Use of a precision-ground micrometric screw enables fine adjustment of 2 µm via vernier scale. The large, TiN-coated dial is easy to adjust and easy to read. The force-and form-fixed adjustment mechanism is almost free of any backlash and play.
- Standard steel and carbide boring bars can be adjusted in length by pushing them deep into the body for maximum stability.
- Through coolant directed to the cutting edge improves tool life, surface finish, and chip evacuation.

FBHM • Offset Boring Bar and Cartridge Heads for Fine Finish

- Diameters 9,75–320mm.
- KM-TS, HSK, CV, DV, and BT steep taper back end versions available.
- Use of a precision-ground micrometric screw enables fine adjustment of 2 µm via vernier scale. The large, TiN-coated dial is easy to adjust and easy to read. The force-and form-fixed adjustment mechanism is almost free of any backlash and play.
- Standard steel and carbide boring bars adjust in length by pushing them deep into the body for maximum stability.
- Aluminium diameter extender with insert cartridges and counterweight are used for diameters starting at 86mm for maximum flexibility.
- Through coolant directed to the cutting edge improves tool life, surface finish, and chip evacuation.

FBHS • Cartridge Boring Heads for Fine Finish

- Diameters 23,5–153mm.
- KM™, HSK, and inch straight shank back end versions available.
- Use of a precision-ground micrometric screw enables fine adjustment of 2 µm via vernier scale. The large, TiN-coated dial is easy to adjust and easy to read. The force-and form-fixed adjustment mechanism is almost free of any backlash and play.
- Large selection of insert holders:
 - 95° — for use of Wiper turning inserts.
 - 90° regular diameter — for most efficient machining of large depths of cut.
 - 90° oversized diameter — for enhanced use of boring head diameter capabilities.
- Generous clearance and through coolant directed to the cutting edge improves tool life, surface finish, and chip evacuation.

BT • Bridge Tools for Rough and Finish Boring

- Diameters 150–2.205mm.
- Highly sophisticated ground serration between consoles/slides and heads as well as T-style bolt clamping provides highest cutting force transmission capabilities, sensitive adjustment, and avoids diameter changes when heads are clamped.
- Only 10 bridge consoles are needed for diameters up to 655mm.
- KM, HSK, and various steep taper adaptors with console corresponding ground serration are available as standard. Through coolant to the cutting edge improves tool life and surface finish.
- Diameters 650–2.205mm are covered with only three aluminium-based consoles and two sets of steel slides for mounting rough and finish boring heads for direct spindle of shell mill adaptor clamping.
- 90° roughing head sets ensure precise height alignment and, by use of negative standard turning inserts, highest metal removal rates.
- New counterweight for better dynamic balancing supplements the fine-boring head with precision-ground micrometric screw enabling fine adjustment of 2 µm via vernier scale.
