

A nighttime photograph of a city skyline, likely New York City, with numerous skyscrapers illuminated by lights. The lights are reflected in the water in the foreground. The sky is dark, and the overall scene is vibrant with city lights.

# Ecology and Economics: It's Also About Resources, Not Just Jobs and Deficits

James H. Brown  
Department of Biology  
University of New Mexico

Presentation to New Mexicans for Science  
and Reason  
9 May 2012

**OUT OF AFRICA**

**INTO THE 21<sup>ST</sup> CENTURY**

# **50,000 years of**

- **Exponential increase in population and resource use**
- **Global geographic expansion**
- **Unprecedented ecological dominance**

# HUMAN POPULATION GROWTH CHART

(including projections)

I THINK I CAN...  
I THINK I CAN...  
I HOPE I CAN...  
I REALLY HOPE I CAN...  
MAN, I HOPE I CAN...

BILLIONS  
15  
12.5  
10  
7.5

YEAR  
1 AD 200 400 600 800 1000 1200 1400 1600 1700 1800 1900 2000 2025 2050

# How much longer can current trajectories of growth and development be maintained?

## Optimistic projections for 2050:

- Population: 1-2% per year, 9-10 billion
- Economy: 4% per year, “lift developing countries out of poverty”

These are exponentials which cannot be continued indefinitely in a finite environment

Are “sustainability” and “sustainable development” assumptions, hypotheses, oxymorons?

# Icons of sustainability re-examined?

## Bristol Bay salmon fishery

“a model of successful natural resource  
stewardship”

State of Alaska <http://www.adfg.alaska.gov>

## Portland, Oregon

“ The most sustainable city in America”

SustainLane (2008) <http://www.sustainlane.com/us-city-rankings/overall-rankings>

# Bristol Bay salmon fishery

“A model of successful natural resource stewardship”

# **Bristol Bay salmon fishery**

**70% of wild salmon harvested, sockeye 95% of catch**

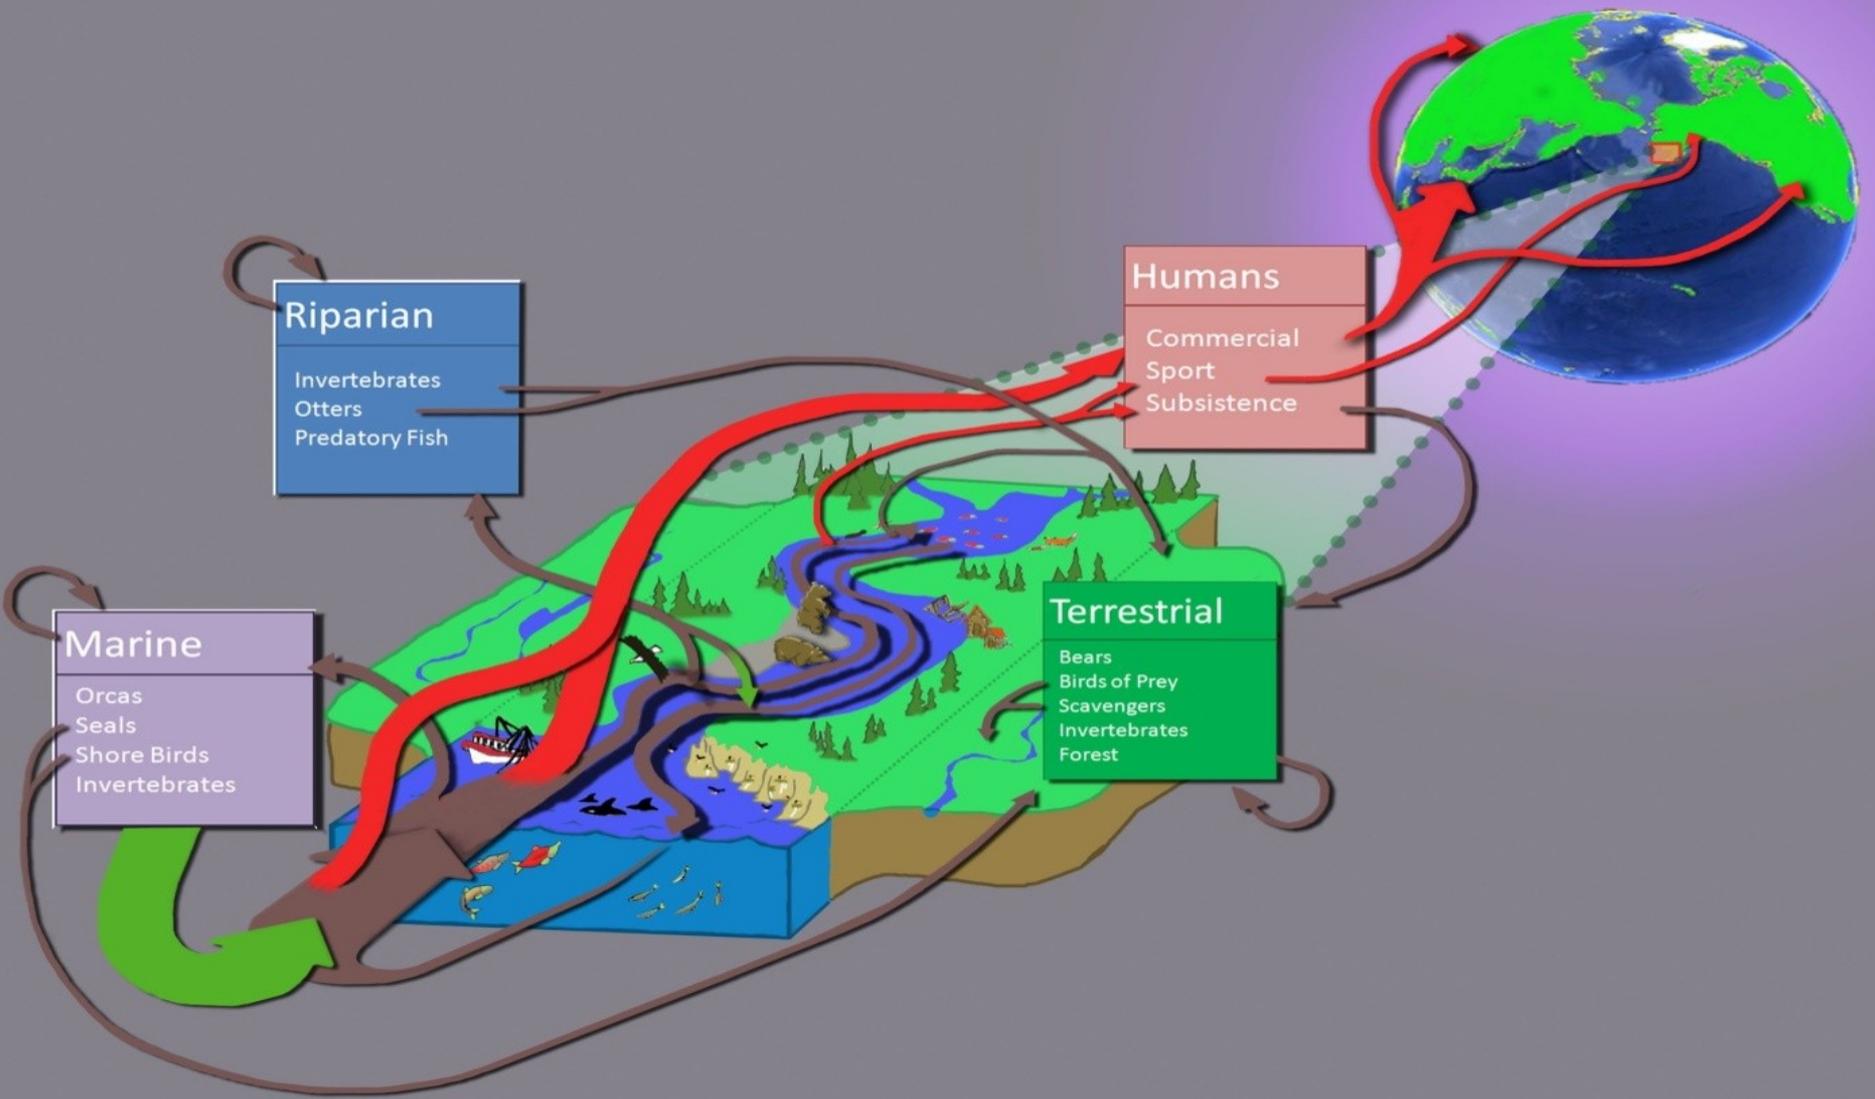

## **Evidence of sustainability**

- Harvests have been steady 2007-2009**

## **Causes for concern**

- Export of 83,000 metric tonnes of salmon biomass:  
12,000 t Carbon, 2,500 t Nitrogen, 330 t Phosphorus**
- In Lake Nerka “this loss of MDN (marine derived nutrients) has reduced lake algal productivity to about 1/3 of its level before commercial fishing”  
Schindler et al. (2005)**
- Effects on terrestrial and riparian ecosystems,  
predators, scavengers, subsistence fishers?**

# Bristol Bay salmon fishery

# Portland, Oregon

**“ The most sustainable city in America ”**

# **Portland, Oregon**

## **City of Portland and Multnomah County**

- population 715,000, median income \$51,000**

### **Imports/consumes**

- 1.25 billion liters of gasoline**
- 28.8 billion megajoules of natural gas**
- 31.1 billion megajoules of electricity**
- 136 billion liters of water**
- 0.5 million tonnes of food**

### **Exports/releases**

- 8.5 million tonnes of carbon as CO<sub>2</sub>**
- 99 billion liters of liquid sewage**
- 1 million tonnes of solid waste**

# Portland, Oregon

# **Humans have always used local ecosystems unsustainably**

**Importing resources**

**Energy, food, water, minerals**

**Exporting wastes**

**CO<sub>2</sub>, sewage, chemical**

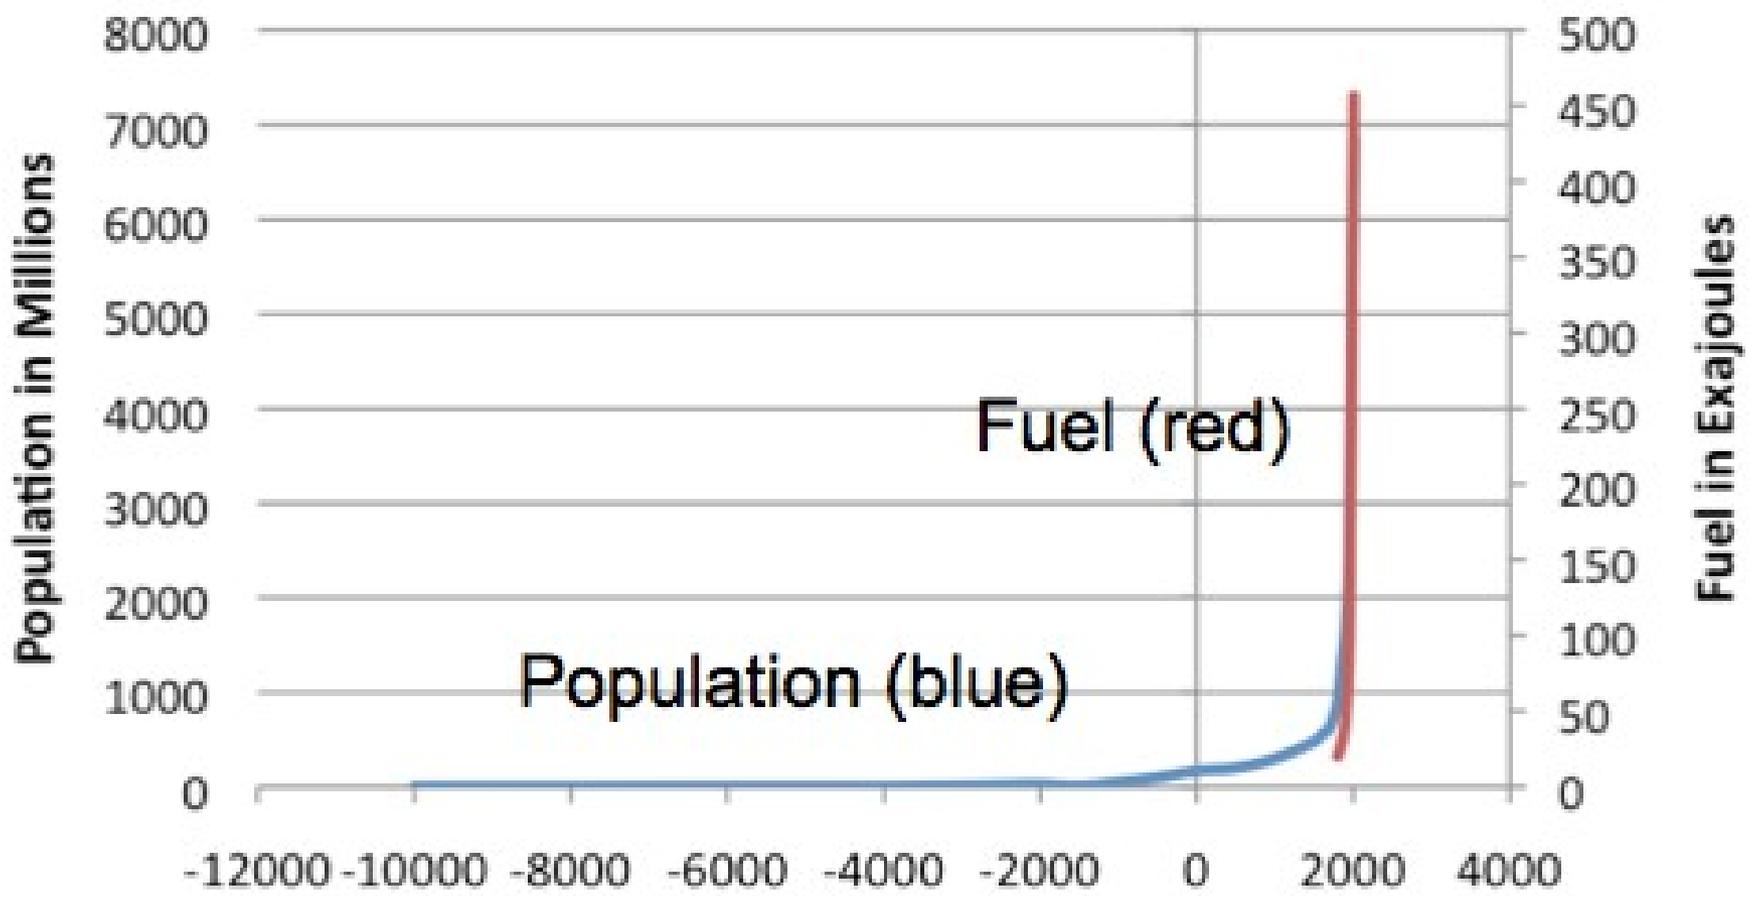

# GLOBAL SUSTAINABILITY: ENERGY AND ECONOMICS

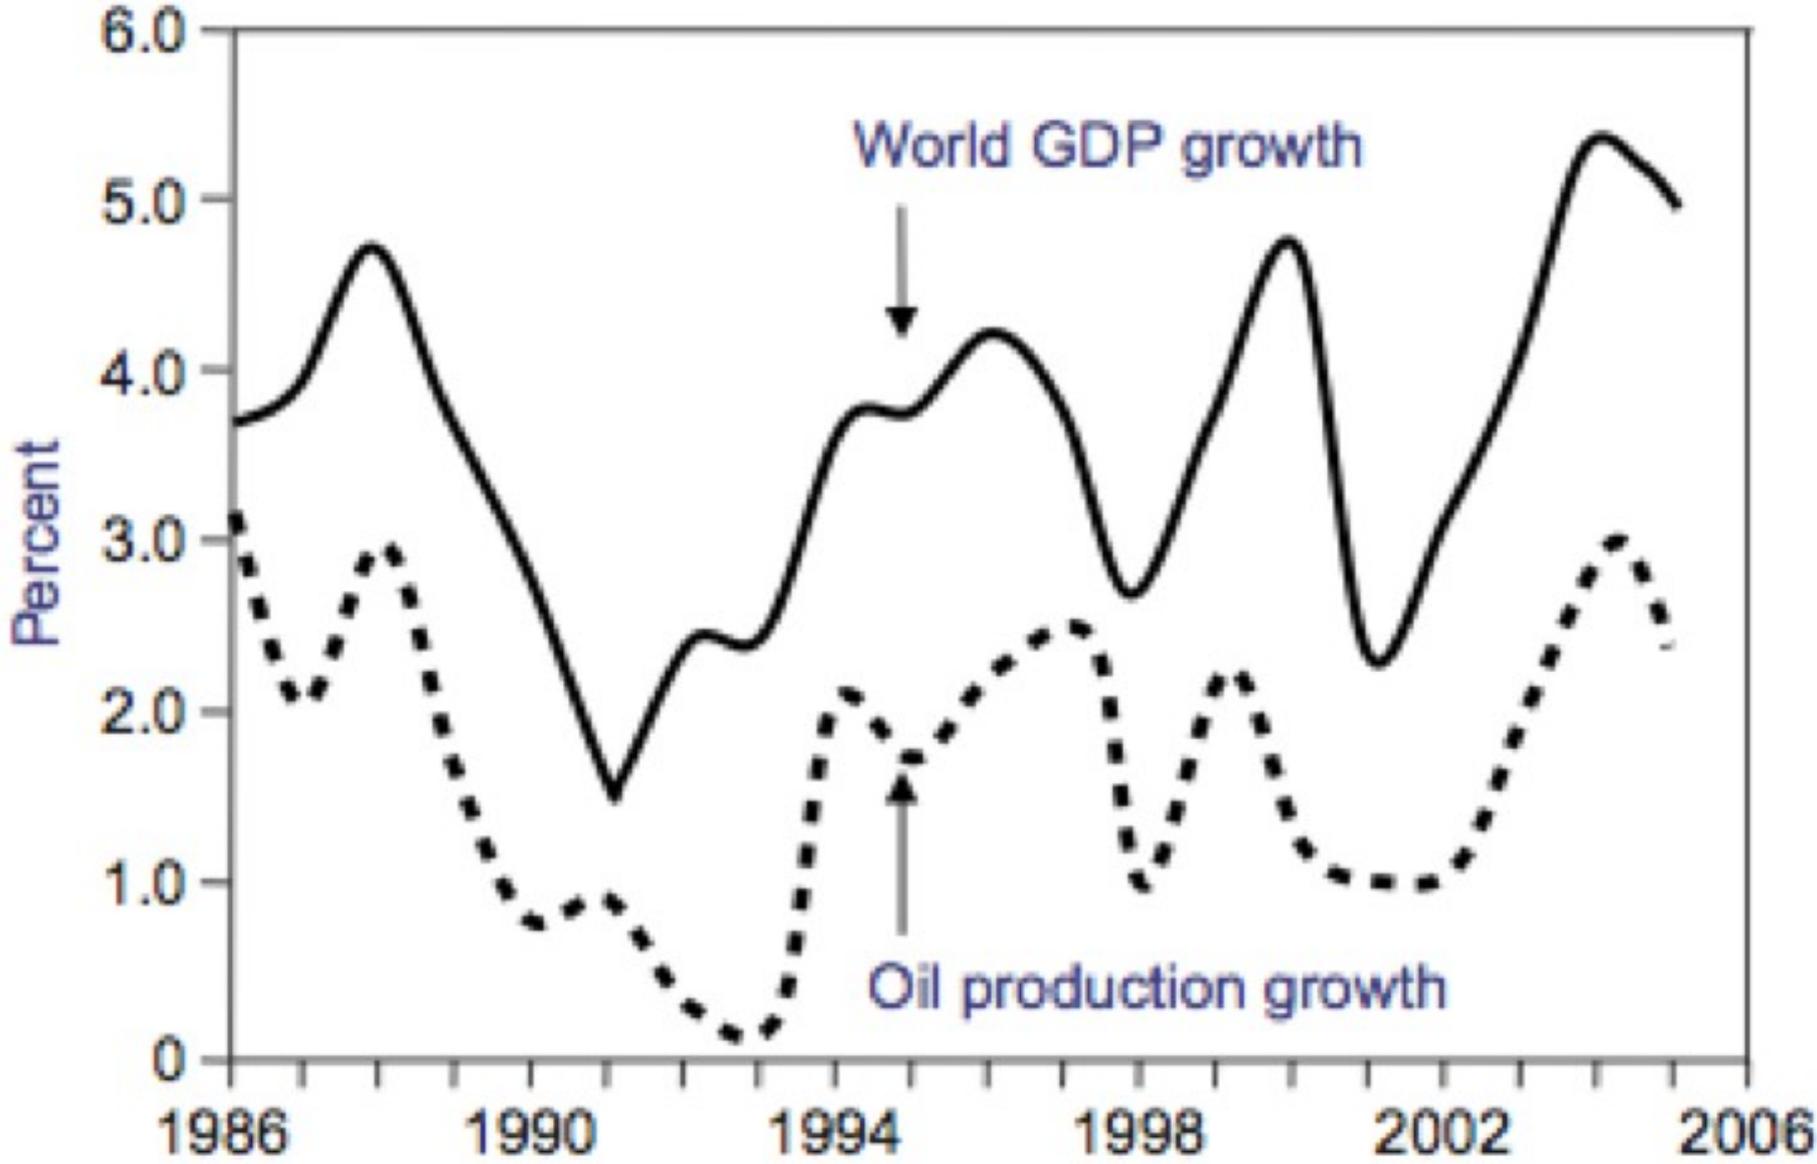

# **Energy and economics**

- **Energy powers the economy**
- **GDP tracks per capita energy use across nations and over time**
- **Most energy comes from fossil fuels**
- **Implications for economic growth and “sustainable development”**

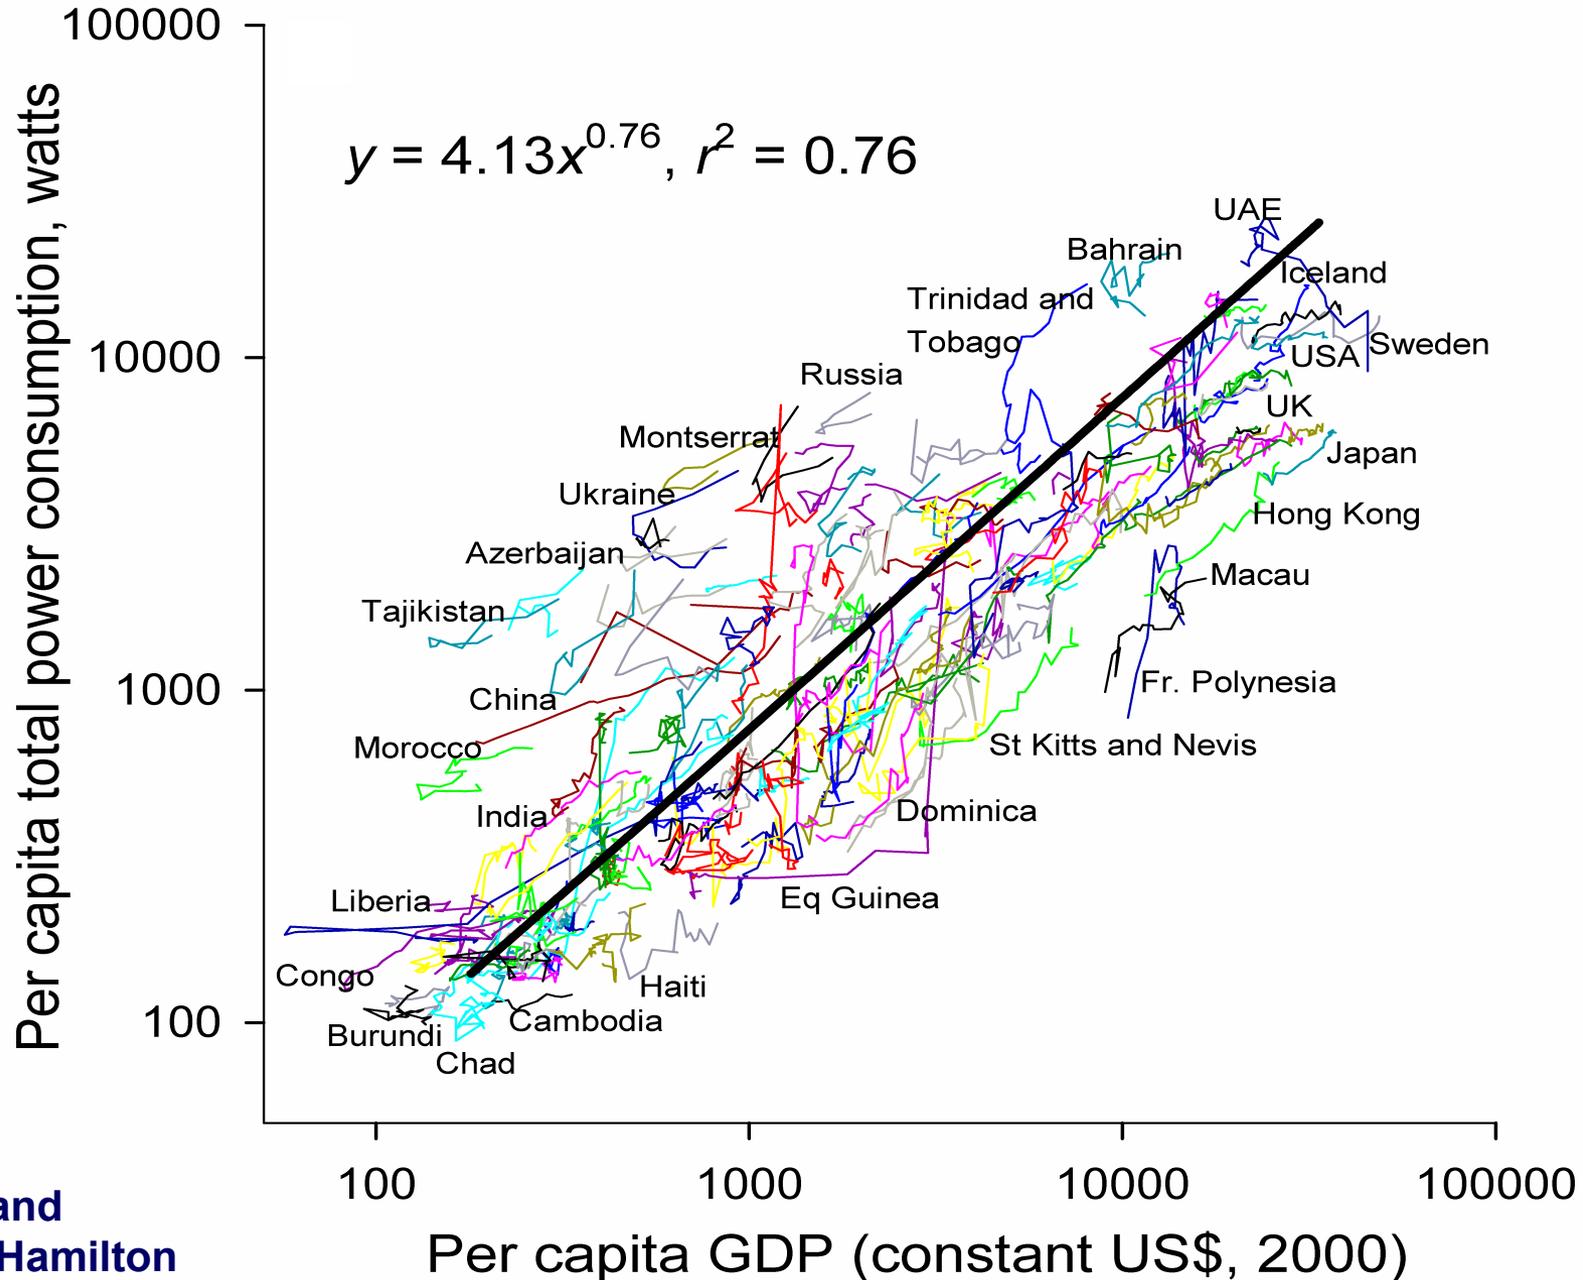

# Global population and energy use

# Global economy and energy use

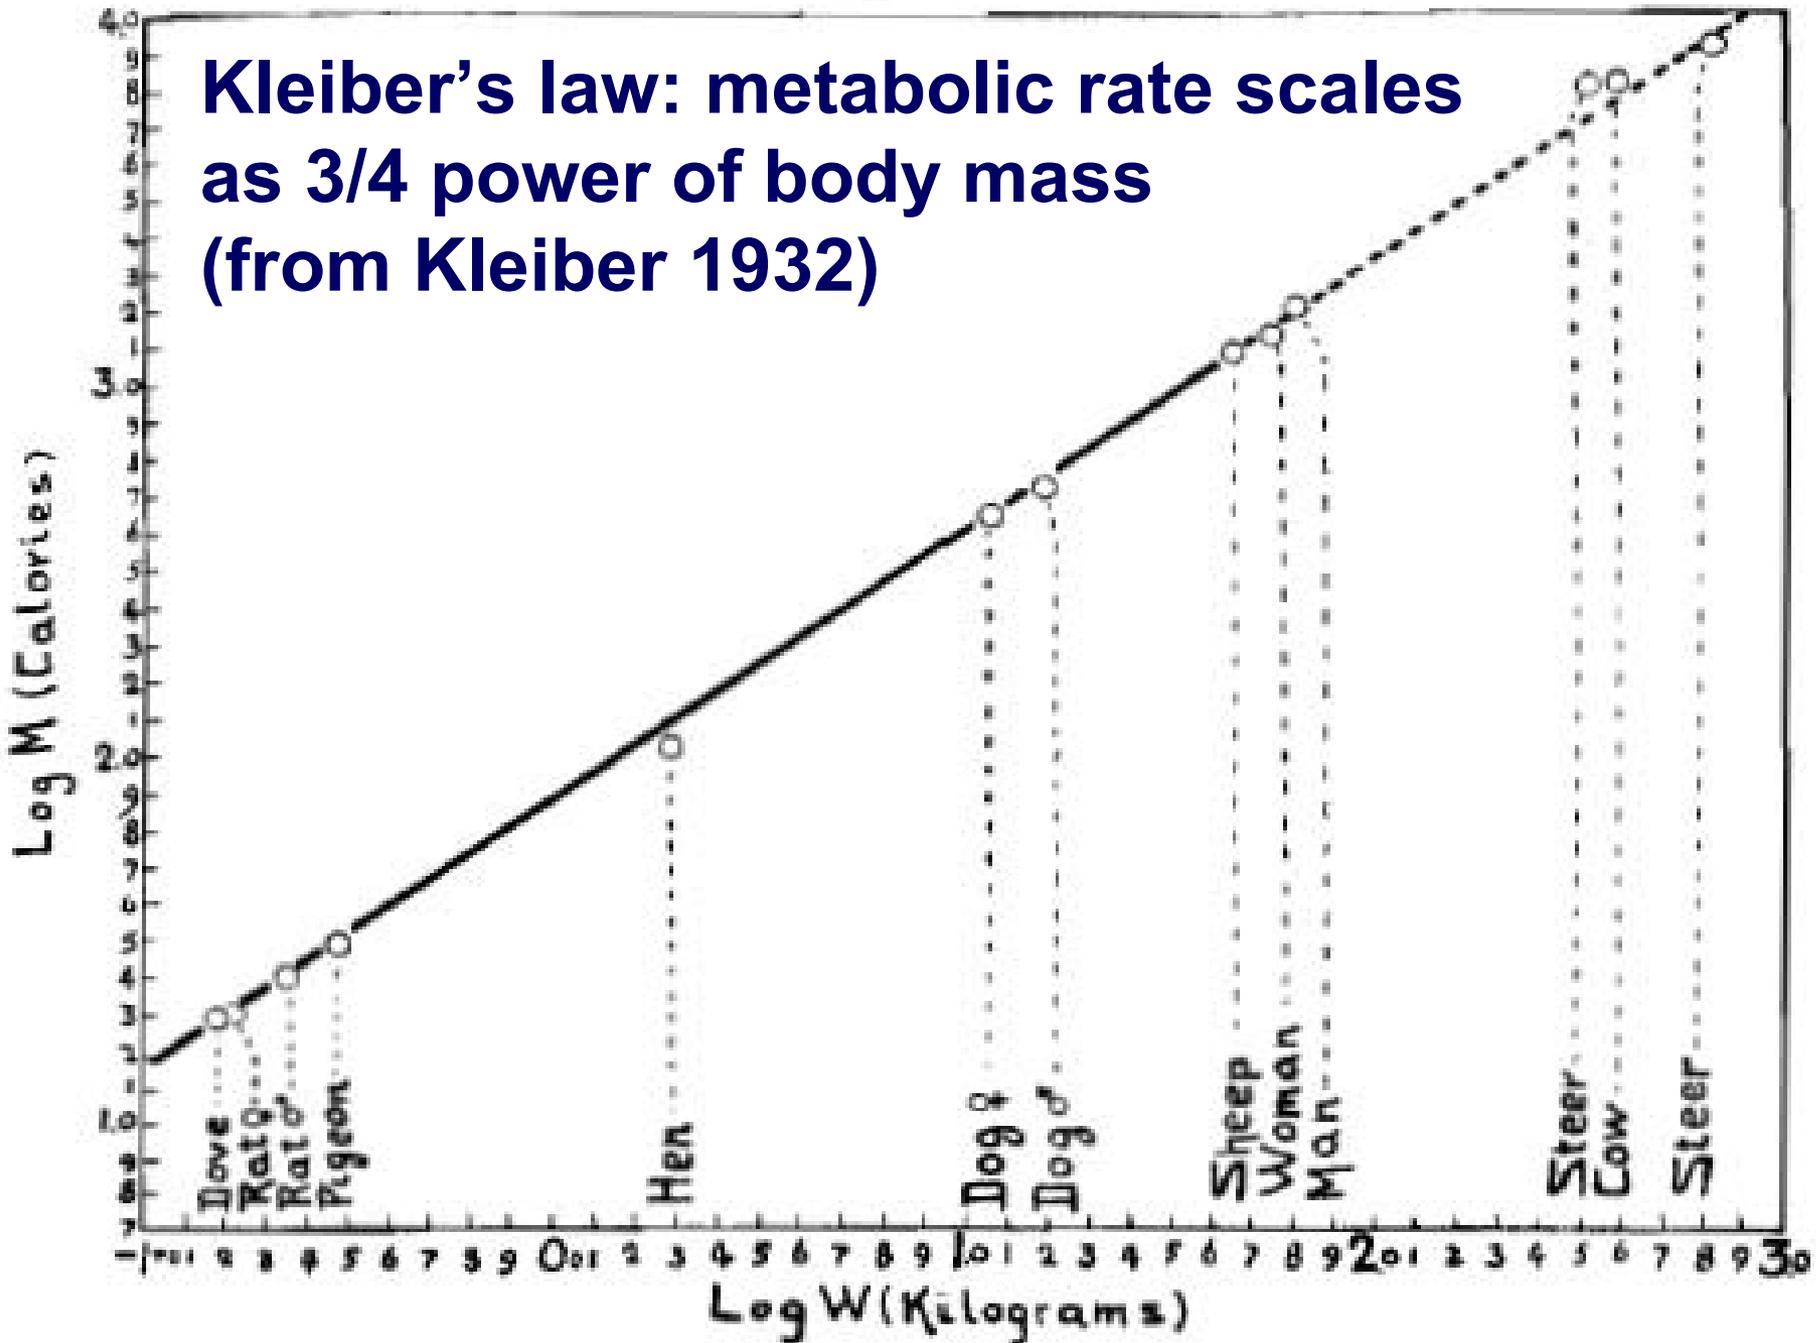

# Per-capita energy use vs. per capita GDP

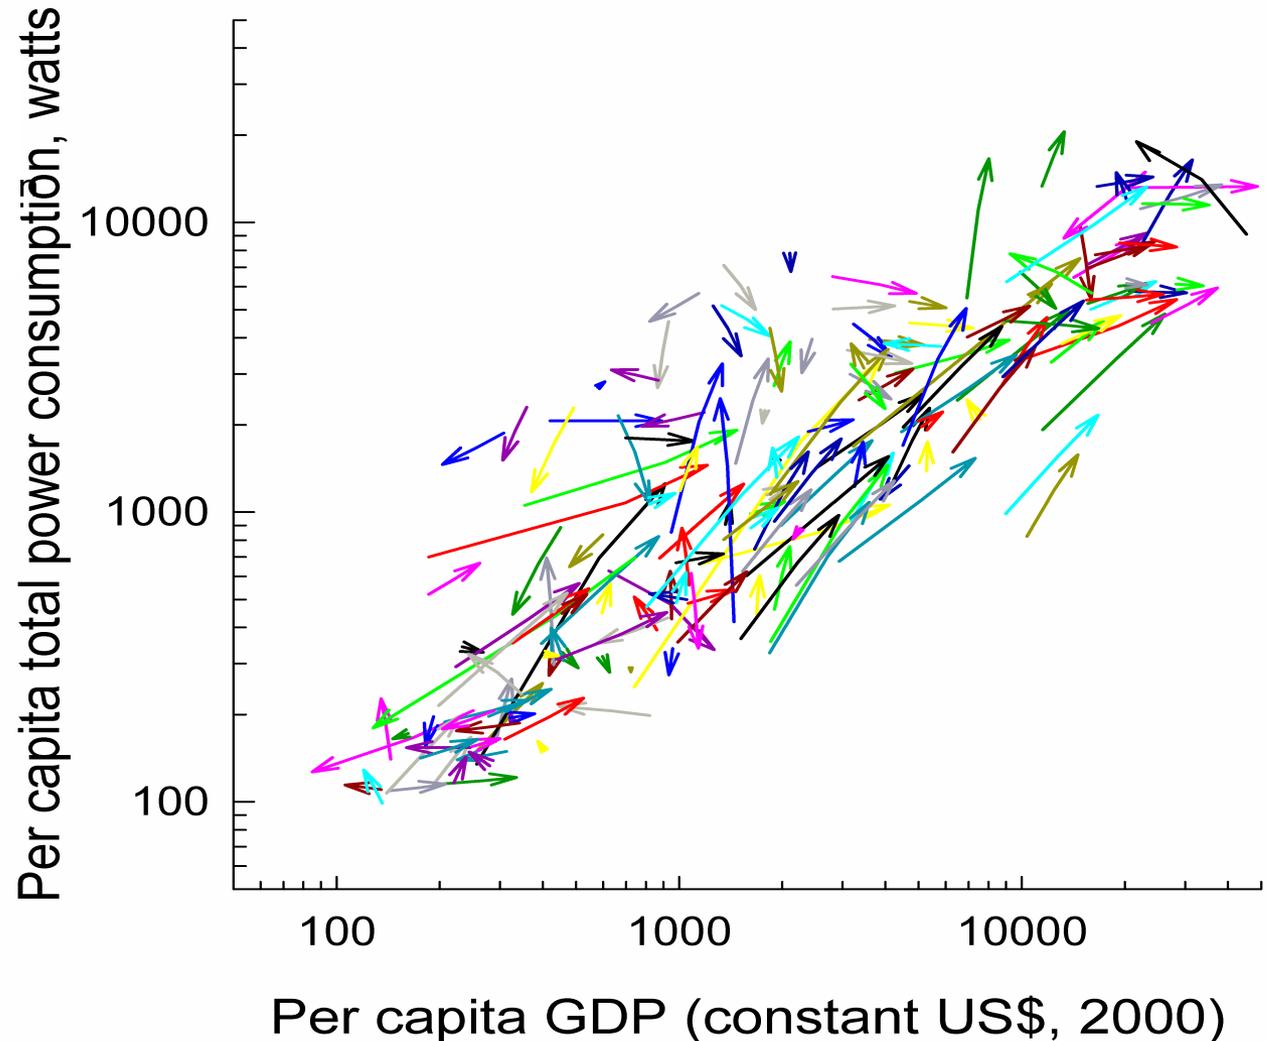

Data compiled and analyzed by M. Hamilton

**Kleiber's law: metabolic rate scales as 3/4 power of body mass (from Kleiber 1932)**

# Per-capita energy use vs. per capita GDP

## 25-year trends

Data compiled and analyzed by M. Hamilton

## **Problem:**

**1) Massive quantities of energy will be required for projected economic growth and development**

## **Solutions:**

**1) Increase supply to meet expected demand**

**2) Reduce demand by reducing population**

**3) Reduce demand by reducing consumption**

# Possible solutions

- 1) **Increase supply of energy to meet expected demand**
  - **How much energy will be required?**
  - **Where will it come from?**

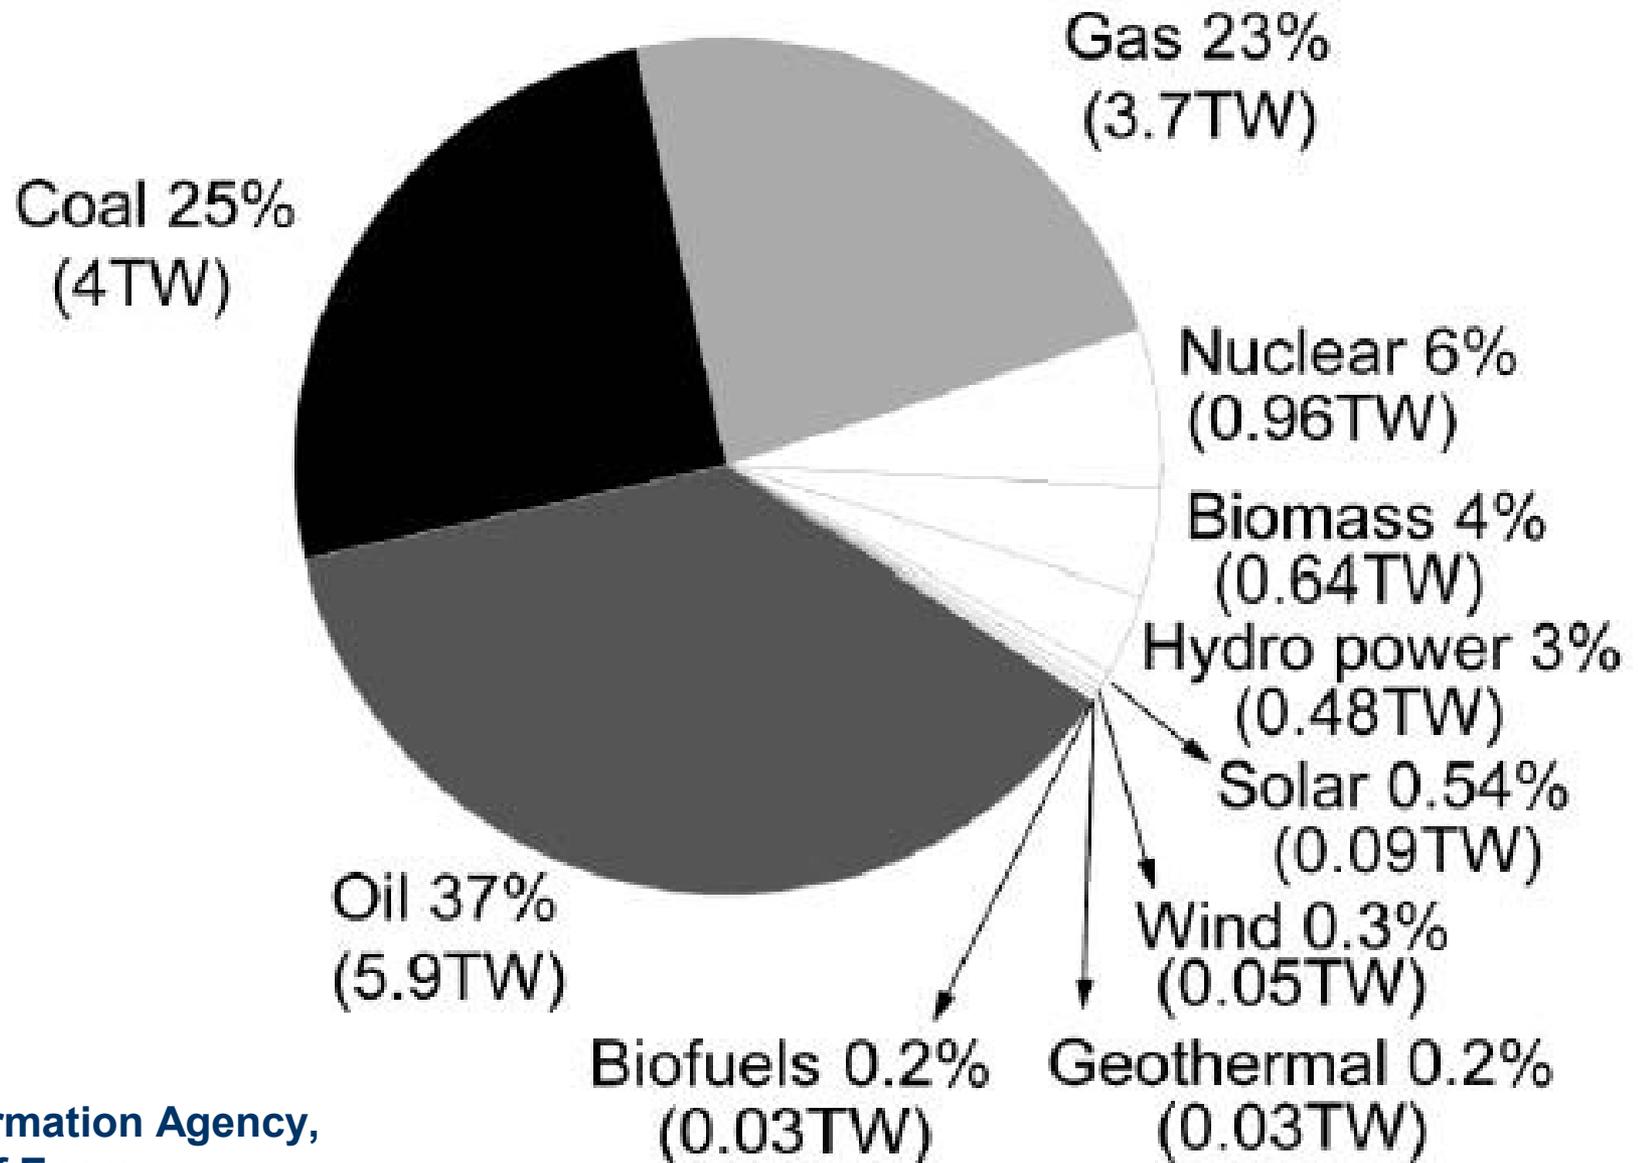

# Total annual global energy consumption in different economic scenarios

	<b>EJ</b>	<b>factor</b>
<b>world current</b>	<b>524</b>	<b>1.0</b>
<b>U.S. lifestyle</b>	<b>2440</b>	<b>4.7</b>
<b>Chinese lifestyle</b>	<b>392</b>	<b>0.75</b>
<b>current trends to 2025*</b>	<b>1142</b>	<b>2.2</b>
<b>U.S. lifestyle in 2025*</b>	<b>5409</b>	<b>10.3</b>

Energy Information Agency,  
U.S. Dept. of Energy

# Current global energy use

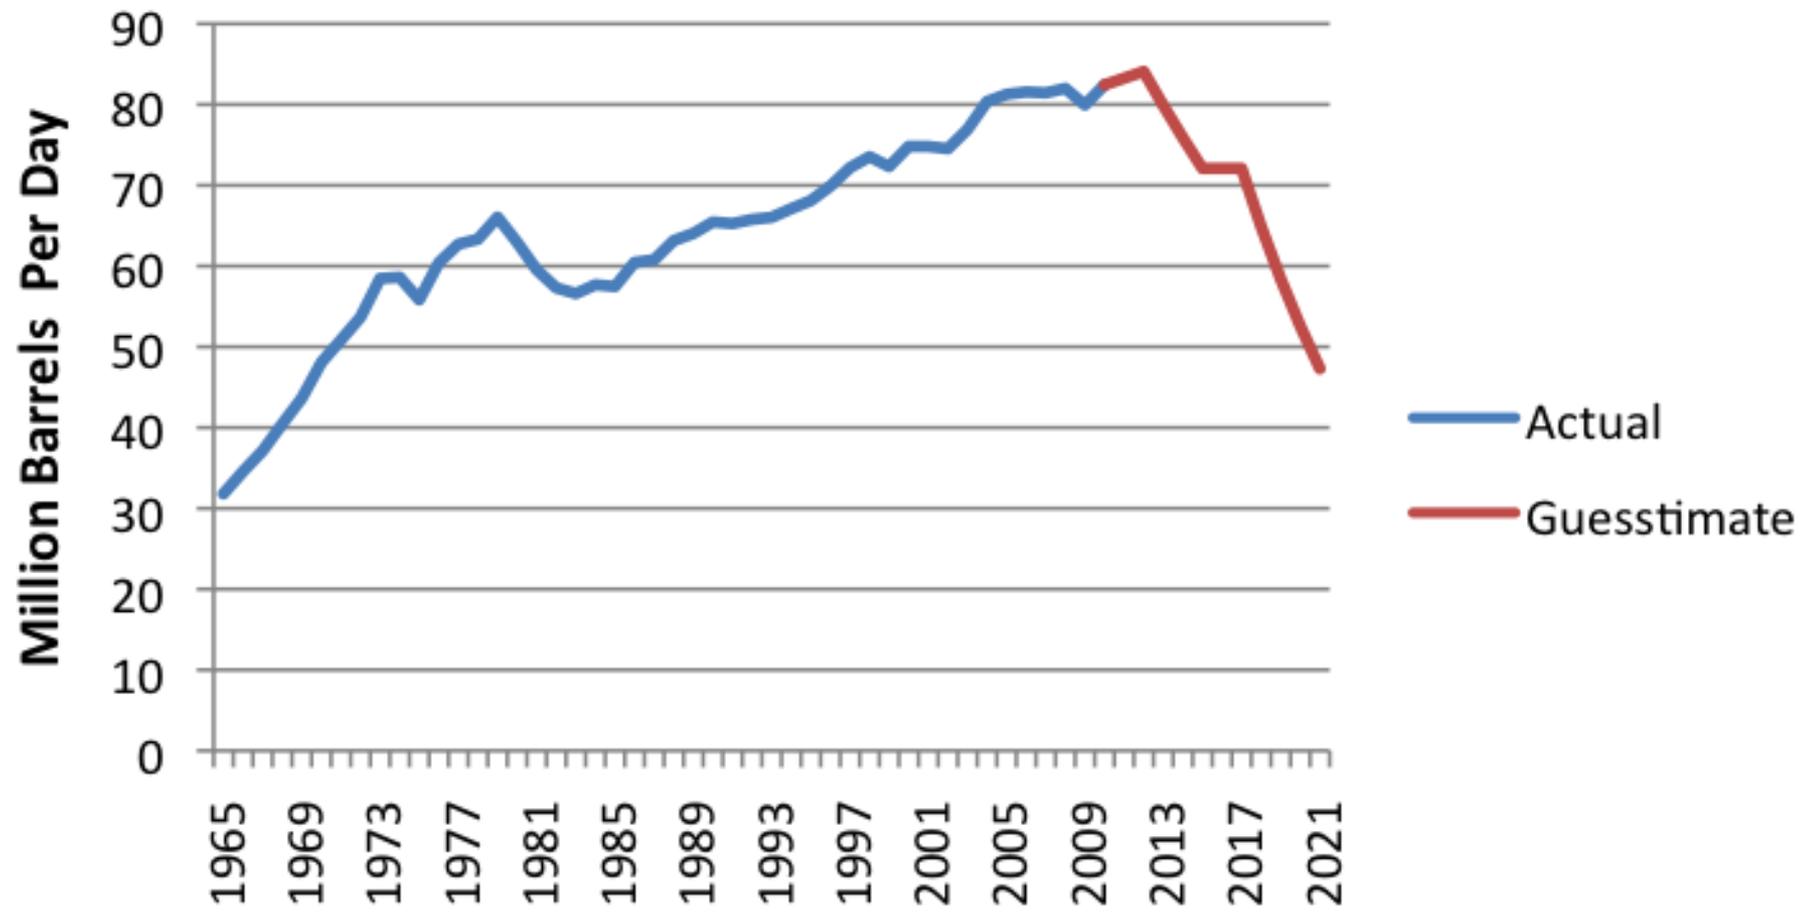

**Fossil fuels** **85%**  
**(oil, gas, coal)**

**“Renewables”** **9%**  
**(solar, wind, geothermal, tidal)**

**Nuclear** **6%**

**Source: Energy Information Agency, U.S. Dept. of Energy**

# Past, present and future oil supply

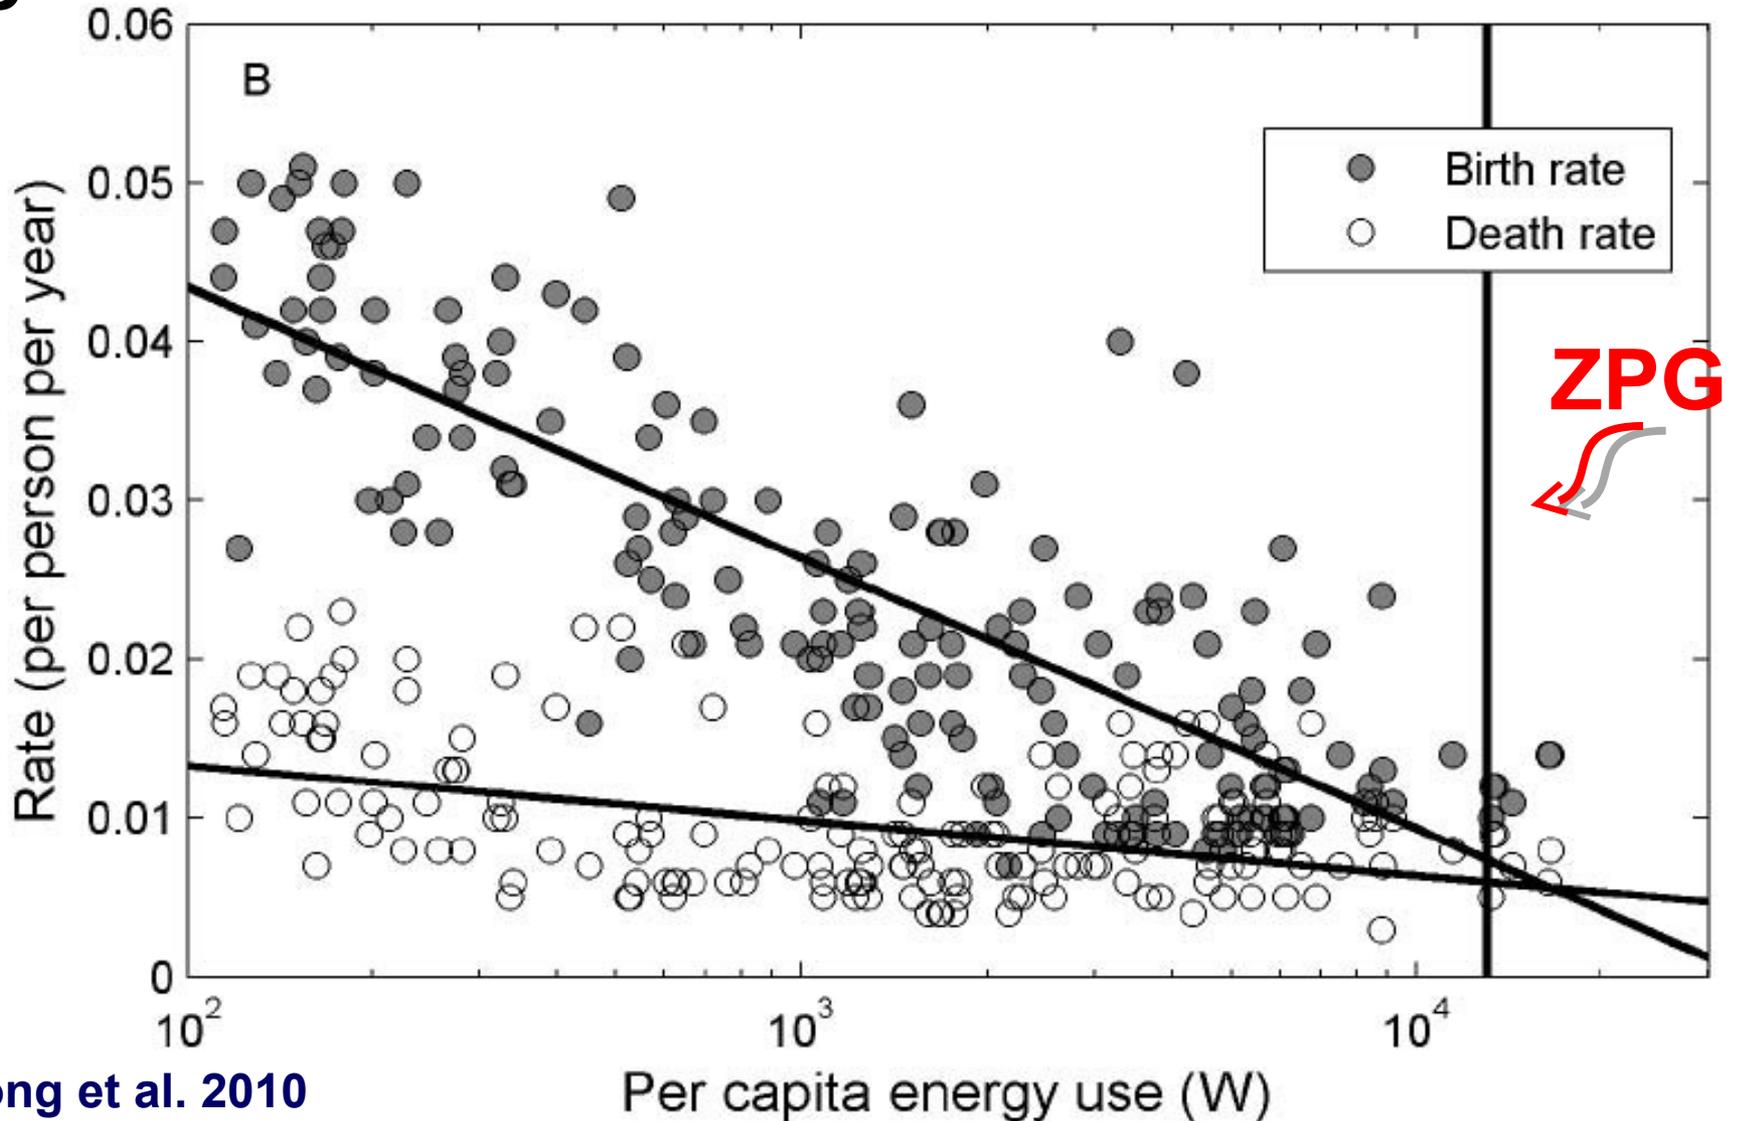

# Possible solutions

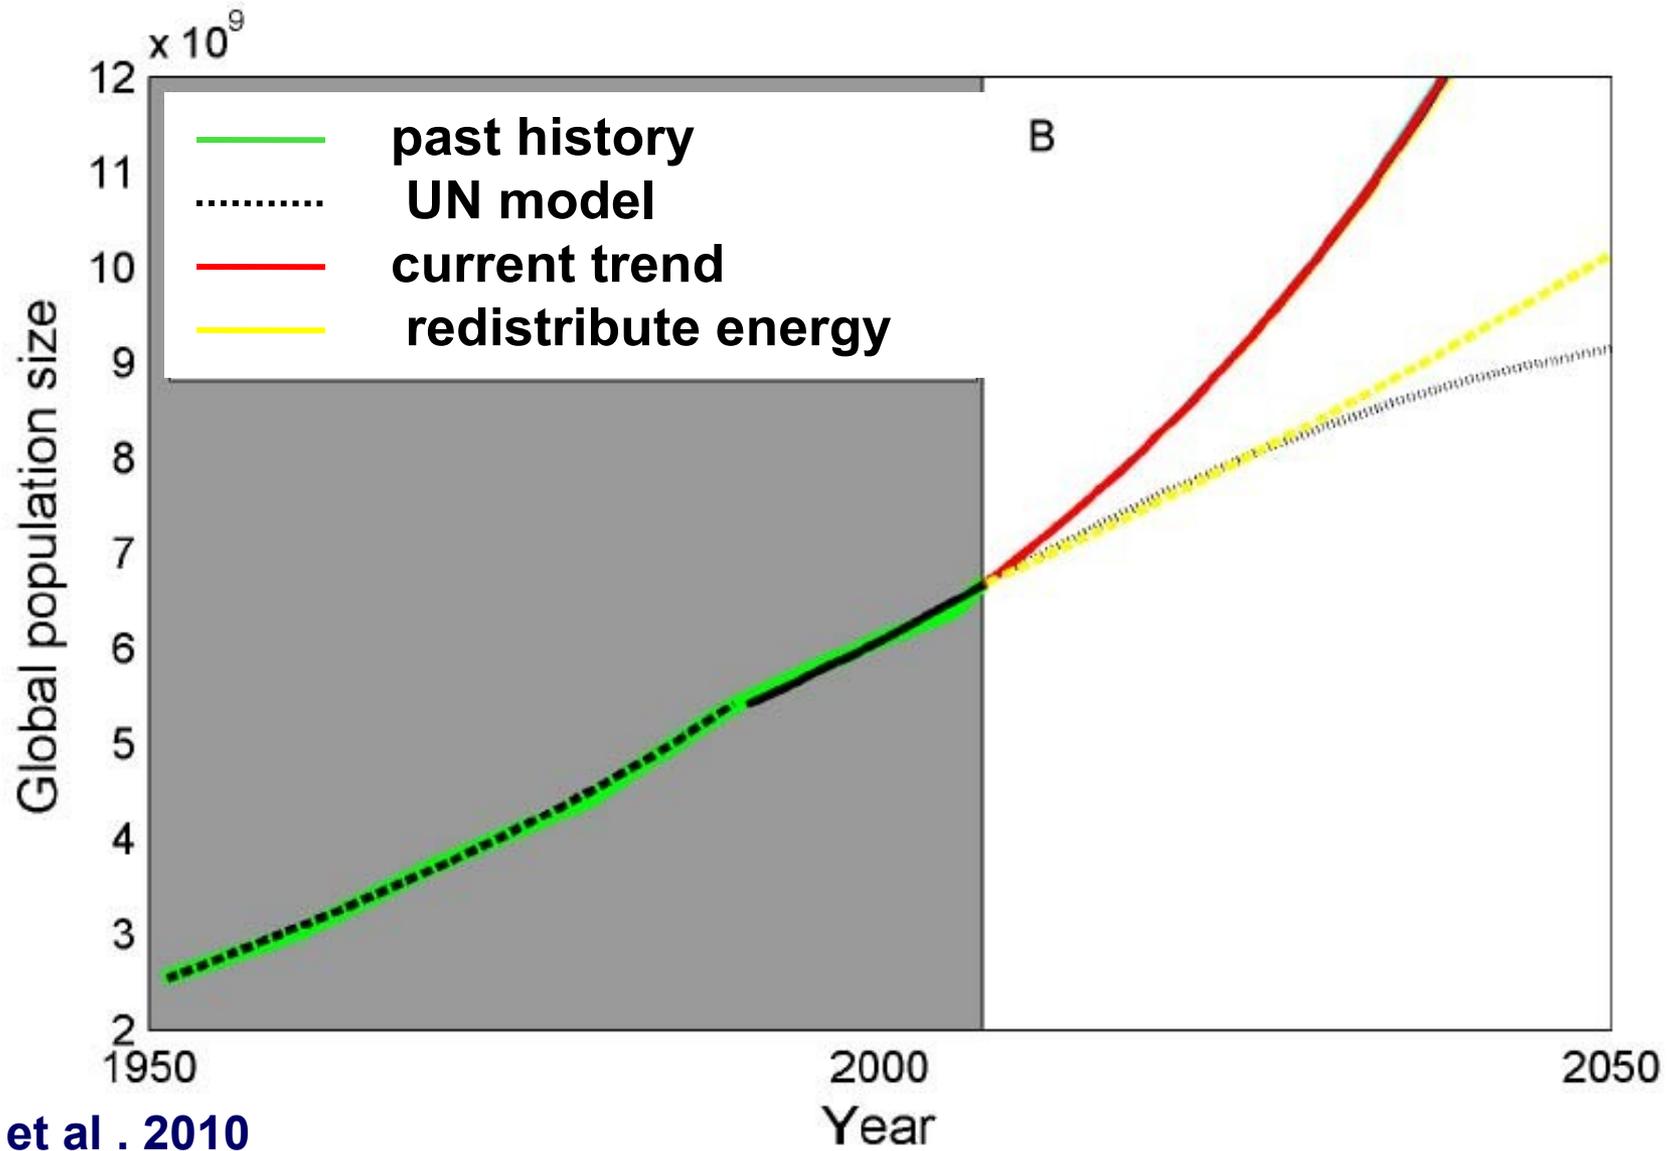

## 2) Reduce demand for energy by reducing population

- take advantage of the “demographic transition” (UN model)  
but see DeLong et al. 2010 (PLoS 1)
- something more drastic – like China’s one child policy?

# Stabilizing population growth – achieving the demographic transition by increased energy use

# Projected population growth

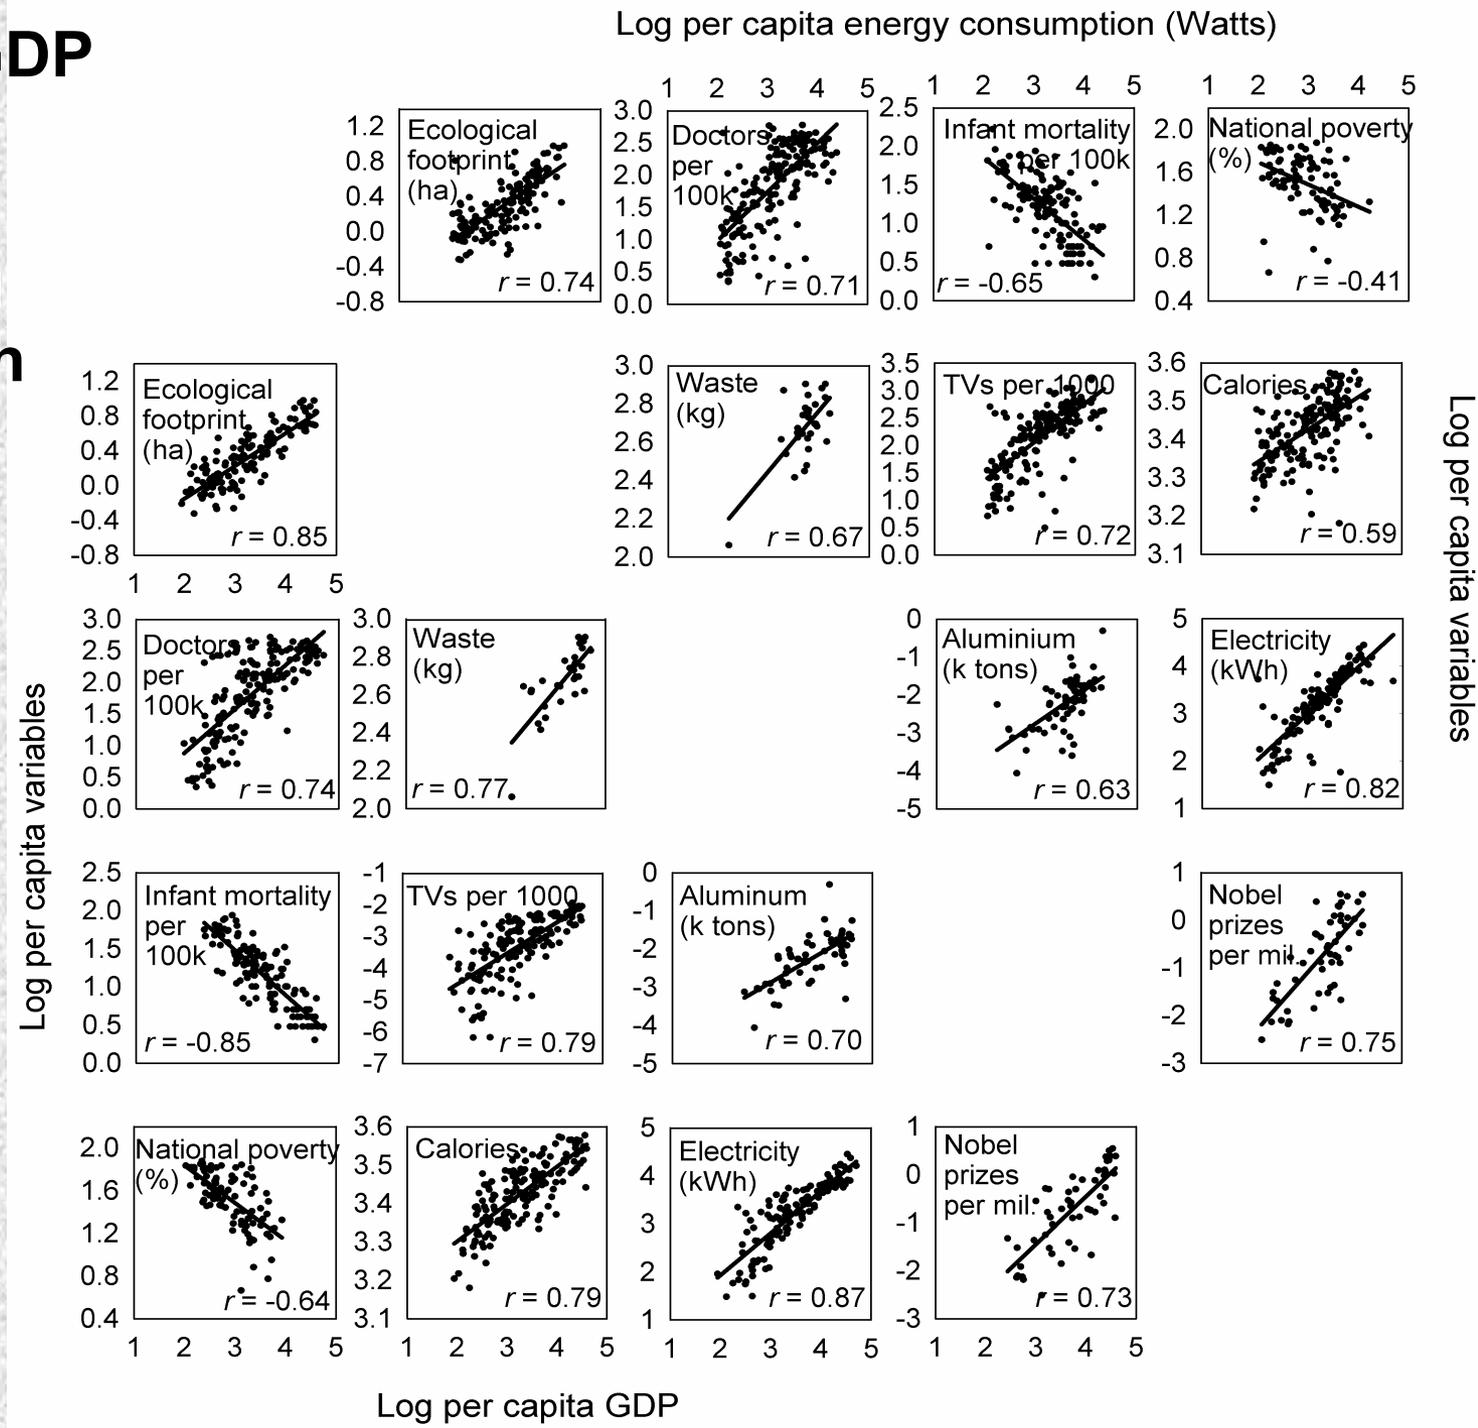

# Possible solutions

- 3) Reduce demand for energy by reducing per-capita consumption**
- increase efficiency – limited gains and must counter “Jevon’s paradox”**
- curtail lifestyle – “there is no such thing as a free lunch”**

# It is not just GDP

No such thing as a free lunch

Other metrics of quality of life are all correlated with GDP and energy use

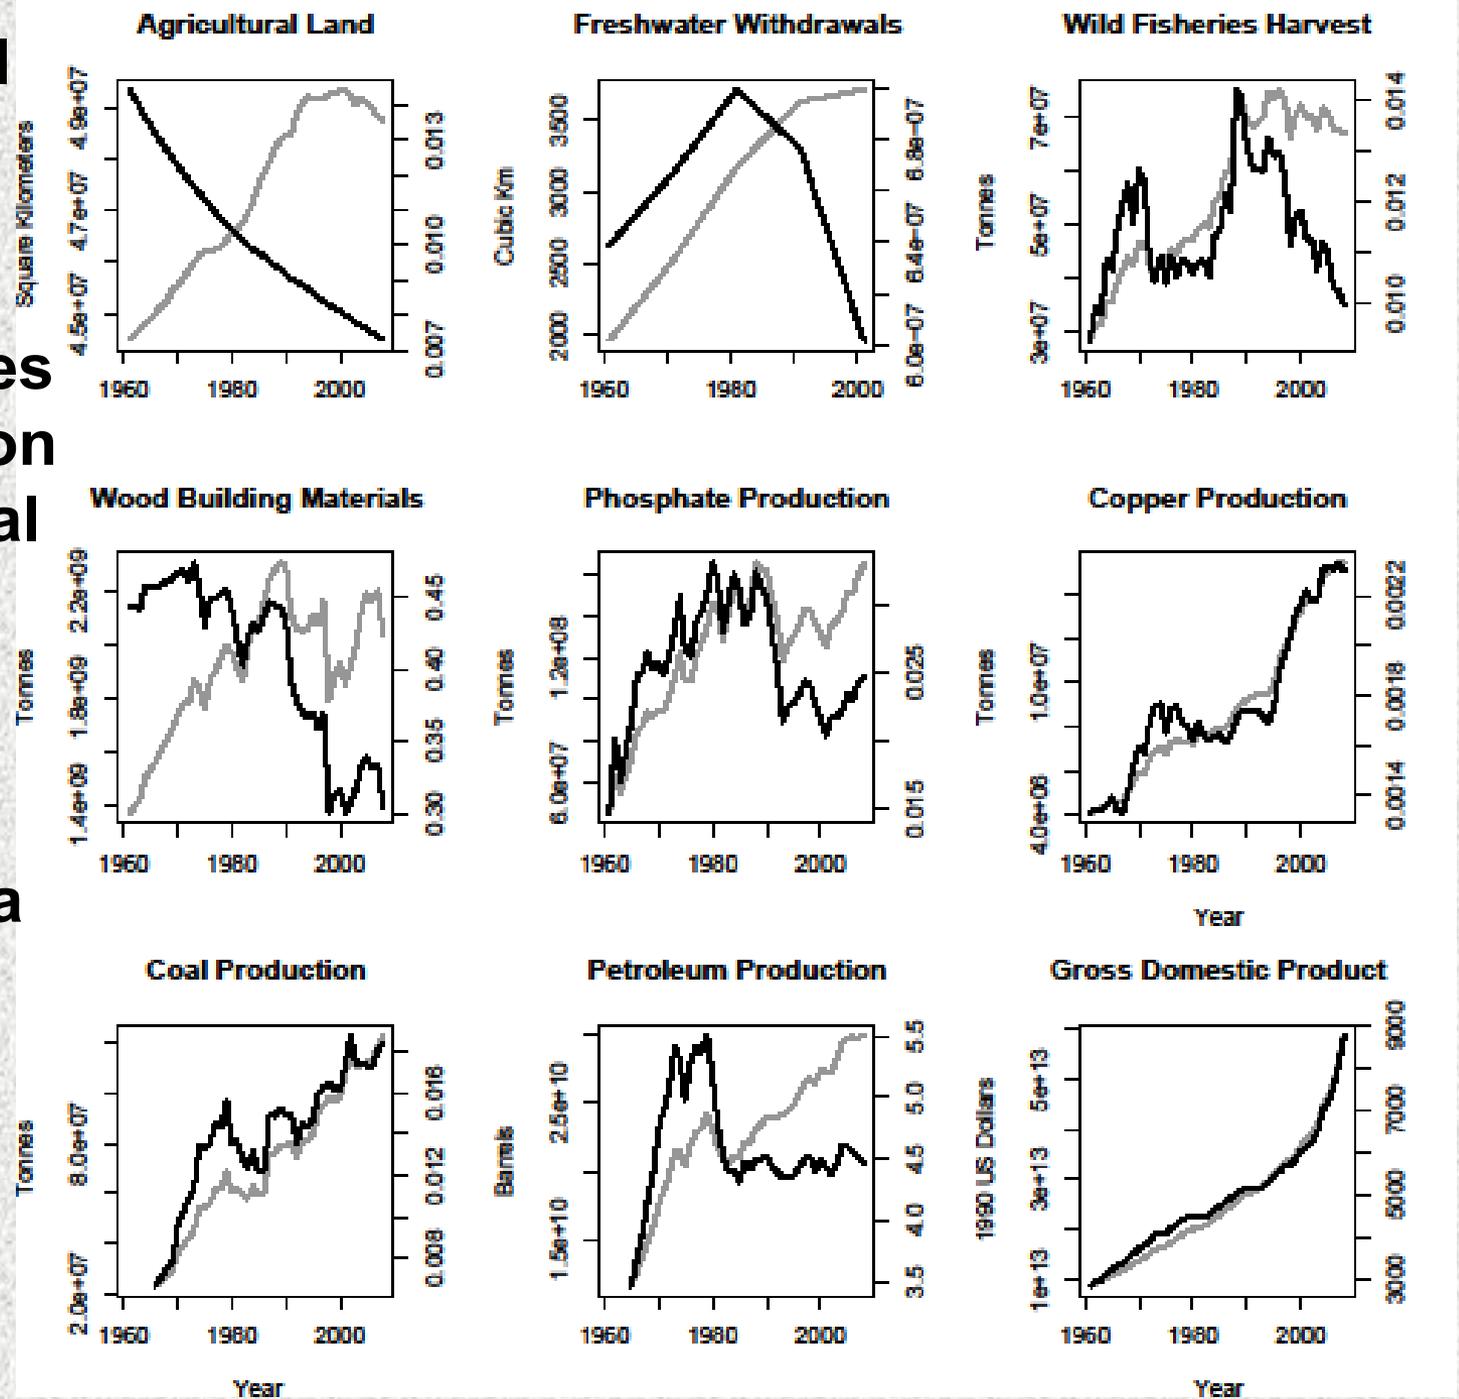

It's not just oil

Per capita rates of consumption of other critical resources are decreasing

— per capita

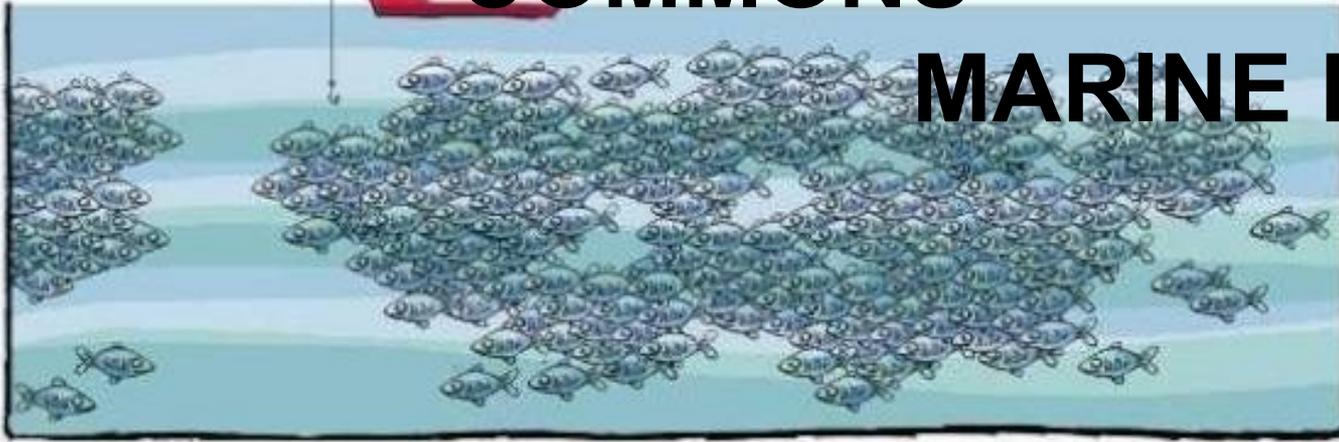

— total

## World Oil Production + Future Guesstimate

Courtesy of G. Tverberg

A photograph of four children in a natural setting. A girl with long blonde hair, wearing a white cardigan, stands in the background. In the foreground, three boys are gathered around a pile of sticks on a rock. One boy in a red and black jacket is leaning over, holding a bundle of sticks. Another boy in a blue and black shirt stands next to him. A third boy in a grey shirt is sitting on the rock, looking at the sticks. The background features a stream, rocks, and tall grasses under bright sunlight.
