**PU & PVC
BELTING**

**Stevens
Belting Limited**

Standard PU & PVC Belting Configuration

Being a truly independent company **Stevens Belting Limited** can source the best materials for your application. We know 'New developments' are important to keep up with your requirements, with this in mind, we have sourced a comprehensive range of belting which makes it possible for us to fulfill your needs for both light and heavy conveying applications in a variety of market segments.

- *PVC, PU fabric-based conveyor belts.*
- *Fabrication & supply.*
- *Installation, service, maintenance.*

Also consider our range of:

- *Transmission belts.*
- *Modular belts.*
- *Hygienic full-plastic sprocket-driven belts (designed to replace Modular belting in difficult to clean areas).*
- *Rubber conveyor belts.*

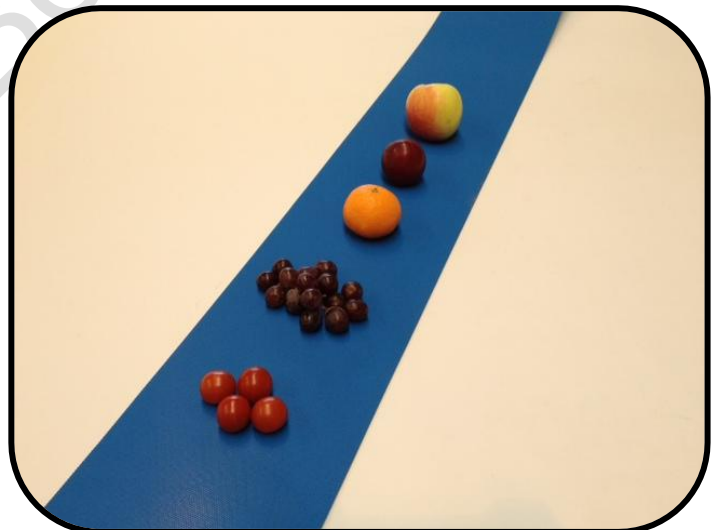

Food Grade Belting

Sectors within the Food Industry:

- Bakery
- Biscuits
- Snacks
- Confectionery
- Dairy
- Meat
- Poultry
- Seafood
- Tobacco

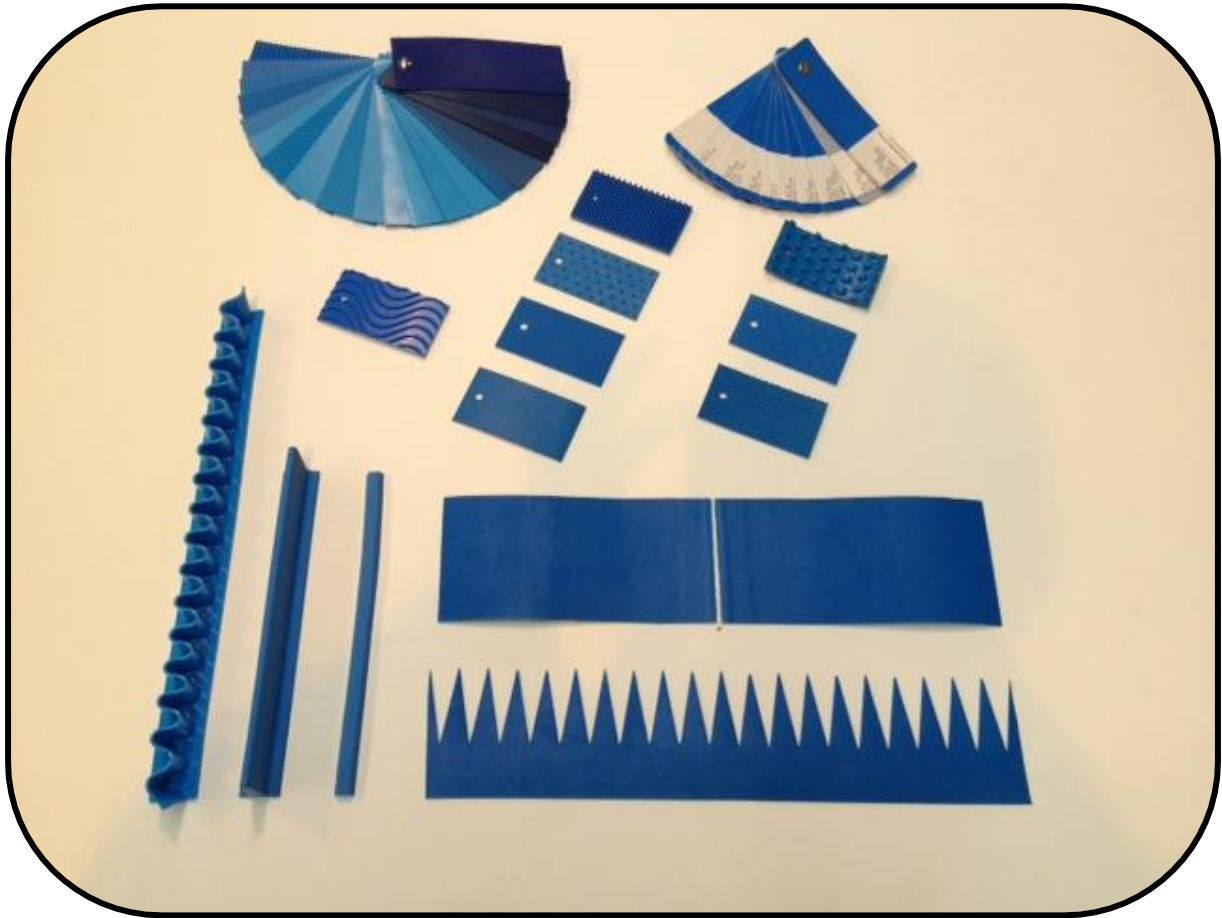

- Agricultural
- Fruit & Veg
- Processing
- Packaging

Many more sectors are catered for and specific belting produced with this in mind, for a more detailed discussion with regards to your own application please contact us direct on the number below or speak to your local **Stevens Belting** representative.

Food Grade Belting

We offer a comprehensive selection of fabric based 'Food Belting' in a variety of materials and colours.

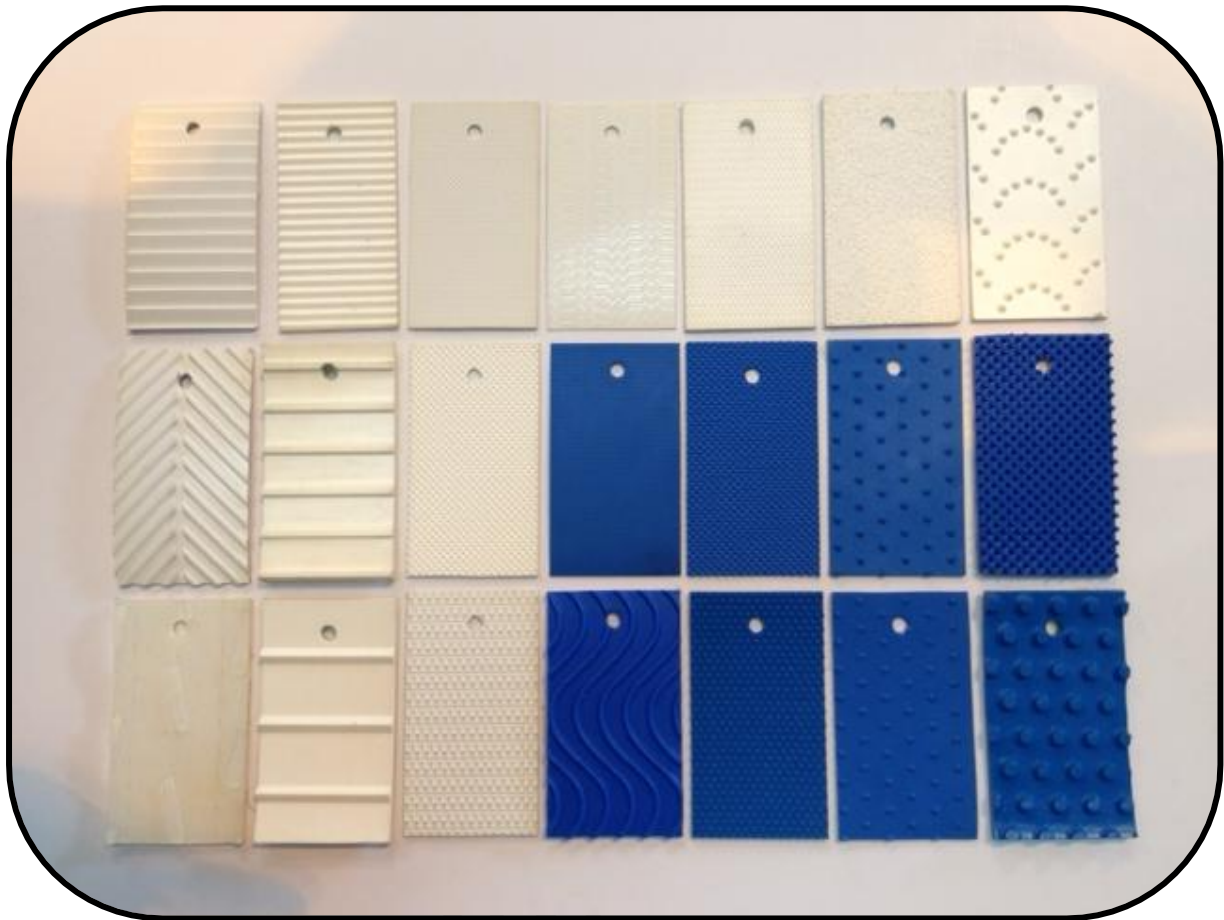

As materials and standards have developed, Blue has become the colour of choice for the food industry, with its easy to see colour (no natural food substance is blue) it lends itself as an ideal transport medium being easily identified when problems occur. That's not to say that White has become redundant and we stock as many belts in white as we do in blue.

A variety of Ply numbers are available ranging from 1,2,3 and even 4 ply for the most arduous applications.

White and Blue Elasticated belts are available for 'Checkweigher' and smaller roller diameters.

Flights, Sidewalls and Tracking strips can be fabricated within our works or even retro-fit within your factory (consult your local **Stevens Belting** contact to confirm) to aid material control and assist in keeping your process running smoothly.

Food Grade Belting

Standard Polyurethane and PVC belting is available in belt lengths of up to 100m and widths of 2m (widths of up to 3.5m are available on request).

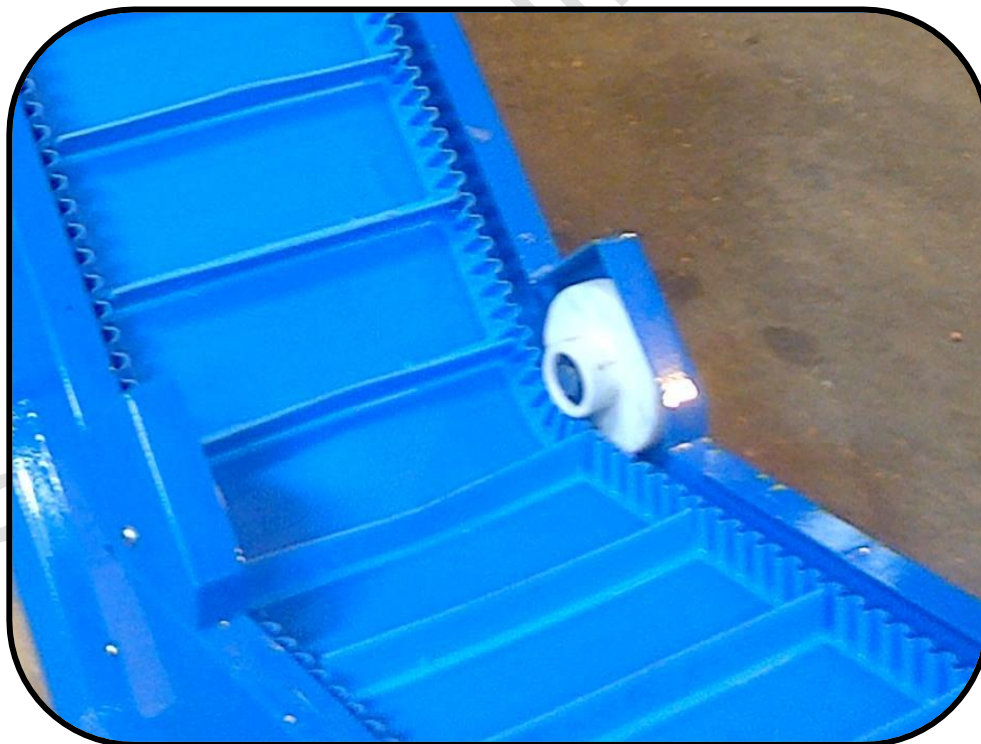

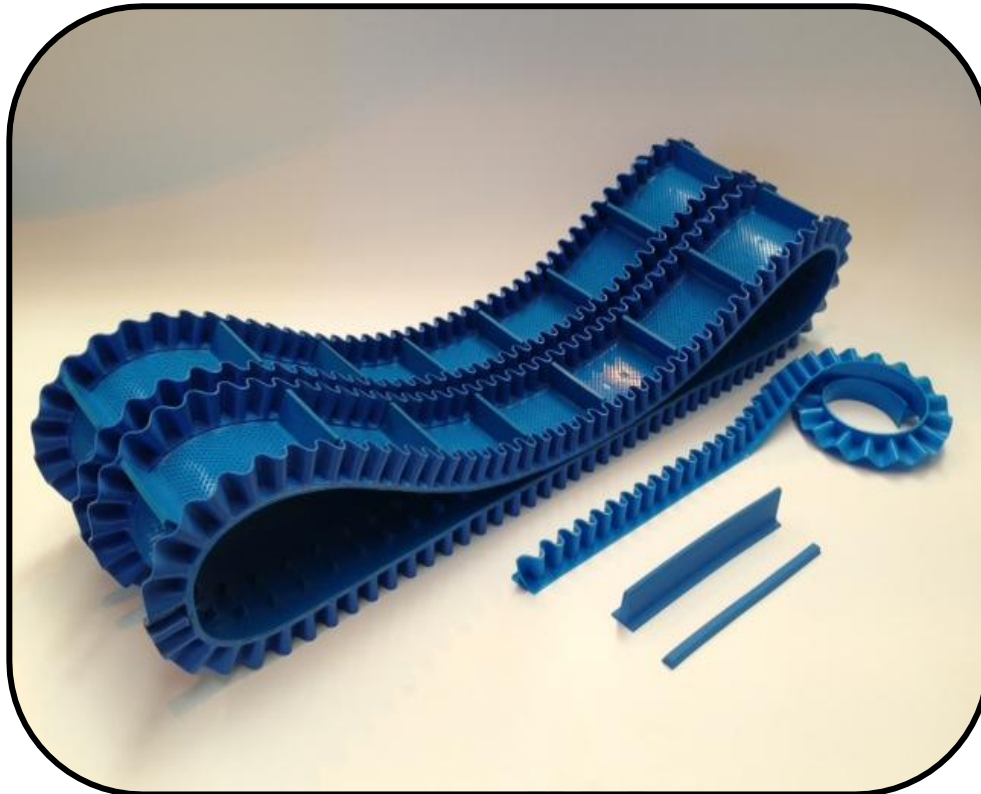

Many different top surface profiles are available complete with 'standard' fabric back, diamond back and the latest lower friction (money saving) 'Whisper' fabrics (to reduce operational noise and also the added benefit of power consumption savings).

All belting is available for supply complete with 'Sealed edges', ideal with a 'Solid back' or 'Diamond back' which presents a fully sealed belt to prevent water or detergent ingress, particularly advantageous in high clean areas.

The captions above only show a brief number of the available patterns, please contact your local **Stevens Belting Limited** representative for more details.

All Food Grade belting is to the latest European and World standards and appropriate Certification is available on request.

Food Grade Belting

Flights, Sidewalls and Tracking guides.

Industrial Belting

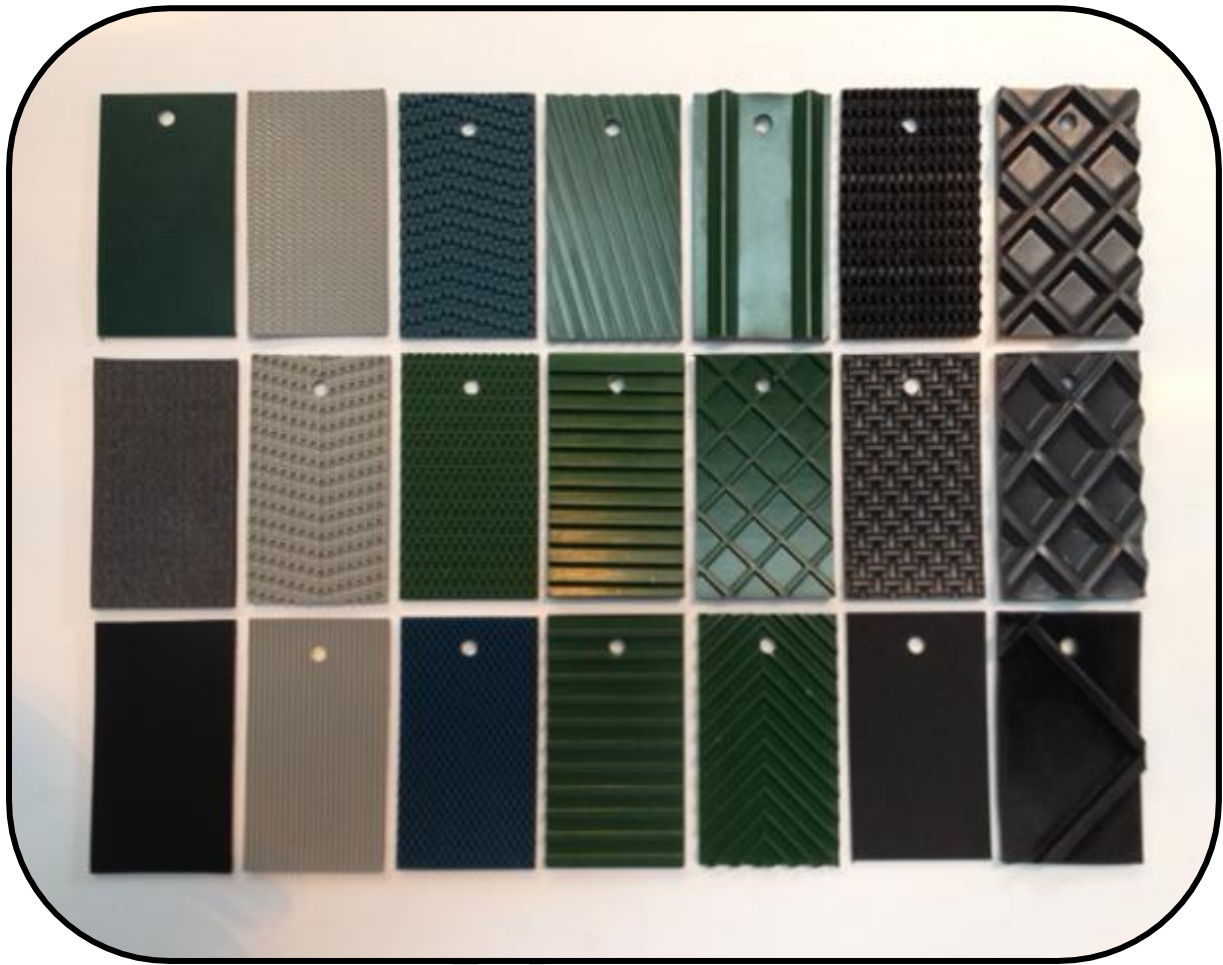

Sectors:

- Materials Handling
- Logistics
- Automotive - Steel
- Airports
- Packaging
- Printing & Paper
- Postal – Mail Handling
- Fitness & Health

Industrial Belting

The criteria for selecting the appropriate 'Pattern' and 'Structure' is very much application driven, carefully selected tension member material is chosen to match the operating conditions for particular industries and processes.

Many different colours and top surface profiles are available complete with 'standard' fabric back, diamond back and the latest lower friction (money saving) 'Whisper' fabrics (to reduce operational noise and also the added benefit of power consumption savings).

Standard Polyurethane and PVC belting is available in belt lengths of up to 100m and widths of 2m (widths of up to 3.5m are available on request).

The captions above only show a brief number of the available patterns, Flights, Sidewalls and Tracking strips can be fabricated within our works or even retro-fit within your factory (consult your local **Stevens Belting Limited** contact to confirm) to aid material control and assist in keeping your process running smoothly.

Special Applications

Your name, our name, your customer's name, whatever you want adhered directly to the top surface of the belt.

Hardwearing, durable and flexible, we recommend you have your logo adhered into the belt at the joint, it hides any slight imperfections and helps you monitor any damage emanating from the joint area.

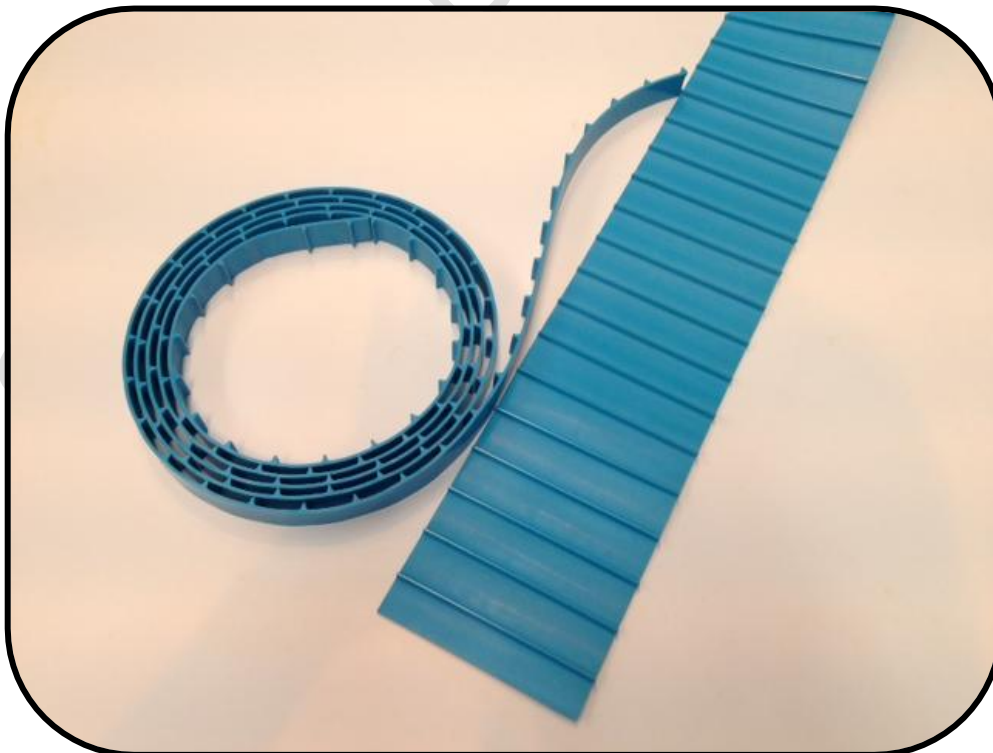

Please contact our office to ascertain the suitability of your base belt for this application.

Plastic Modular Belting.

Hygienic full-plastic sprocket-driven belts

(designed to directly replace Modular belting in difficult to clean areas).

Installation, Service, Maintenance.

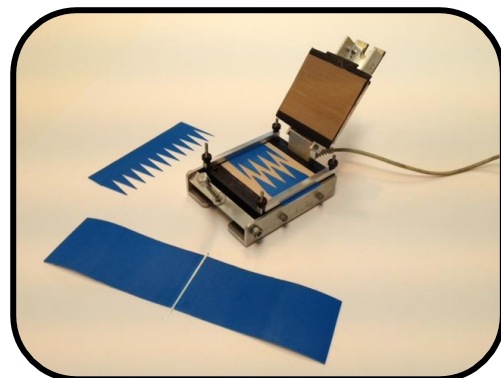

Stevens Belting Limited offers a full onsite fitting service, whether it is a 100m x 3m or 300mm x 10mm we have the expertise and equipment to cater for your needs.

Our trained and friendly engineers are fully aware of the need for a quick turnaround, couple this with the latest developments in equipment and it means we can provide a safe and efficient site-service.

Our service is available 24 – 7 every week of the year, simply dial the office number: 0121 271 0047 and your call will be answered, even if you call 'out of hours', you will be diverted to the relevant engineer 'on call'.

For your peace of mind we offer a full 'Site – Survey' facility which enables you to call us and simply quote the reference name or number (you decide how the survey is worded) and we will either, already have the belt in stock or be able to prepare the belt correctly prior to the site visit.

Conclusion

At **Stevens Belting Limited** we firmly believe we offer quality products at competitive prices.

We cannot guarantee to have every belt you need in stock but we can guarantee to give every effort to source your belt or find an equivalent, often better suited to your application than your original choice.

As you will see from our comprehensive range of products we offer all types of modern conveyor belting and the latest methods of joining, along with a few 'old fashioned' well proven methods.

We also offer a comprehensive service for adhering 'Flights, Sidewalls and Tracking guides'. All attached via either 'High frequency welding, hot melt or adhesives' whichever is the most suitable for your application.
