Opening: 39.32cm W x 39.75cm H

2-Door Vertical
21.59cm W x 45.47cm H x 48.26cm D
Opening: 17.81cm W x 39.32cm H

2-Door Horizontal
45.47cm W x 21.59cm H x 48.26cm D
Opening: 39.32cm W x 17.81cm H

4-Door
22.35cm W x 21.59cm H x 48.26cm D
Opening: 16.31cm W x 17.81cm H

6-Door
40.13cm W x 21.59cm H x 48.26cm D
Opening: 8.74cm W x 17.81cm H

SupplyLocker requires only a power supply and a network connection for full connectivity to the cloud based SupplyPort database. Monitor the activity, stock levels and alerts at your device from anywhere, 24 hours a day.

When items are loaded in to the locker, individual door control is set according to the items' individual usage requirements. For example, a hand-held power tool can be issued to a user for a set time period. Once reached, the user and/or an administrator will receive an electronic alert stating that their check-out period has been exceeded. Once returned to the locker, the user can connect the tool to the optional built-in charging point. This feature has unlimited applications for products requiring check-in/check-out, calibration, automated lock-down, power charging and many more.

Remote Diagnostics

SupplyLocker's network connection allows remote diagnostics and servicing from our dedicated UK Support experts.

High capacity, small footprint

Configure your cabinet for up to 48 individually locked compartments or mix & match doors for larger storage requirements.

Operating as a stand alone unit or as part of a custom vending solution with other SupplyPro devices, SupplyLocker provides full usage audit trails. If your supply chain can benefit from high capacity managed storage of your critical assets, Tooling Intelligence can offer a custom solution to the most simple and most complex of demands.
