All Lushington Sheds are Designed & Manufactured by Lushington Garden Buildings. MARCH 2018. All Prices Include 20% VAT & Delivery Throughout the Isle of Wight & Yorkshire. Delivery is Now Available Throughout the UK (Additional Charge).

Explanation of Optional Extras & Building/Base Preparation

Site Assembly

Assembly of the building onto an existing or specially prepared base, including felting the roof and glazing the windows.

Pressure Treated Floor Bearers

3" X 2" pressured treated floor bearers are strongly recommended to level and support the building onto an existing or specially laid concrete base, paved patio or decking area to raise the building by approximately 2" to allow for air circulation under the floor and to prevent any part of the building from having direct ground contact. The bearers usually run in the shortest dimension. The floor/joists of the building are secured to the bearers.

Mixture of Bricks/Blocks & Packing

A mixture of loosely laid bricks/blocks and packing can be used to level the floor bearers at 4ft intervals onto an existing compacted soil or lawn site where no base has been specially prepared. This method can only be used providing the slope of the proposed site is no more than 16".

Perimeter Base Gravel Boards

Pressure treated gravel boards are cut to size and fitted around the perimeter of the buildings floor to disguise the brick/block packing used to level and support the bearers on sloping ground.

Reinforced Concrete Base

A 4" - 6" thick reinforced concrete base laid to the external base dimensions of the building. The quoted prices allow for up to a 9" fall of the ground. The site will be dug out as required to enable the lowest side of the base to be finished just above the existing ground level. All spoils dug out for the base will be removed from site. Additional costings are available to quotation for sites which slope more than 9".

Cuprinol or Sovereign SX70 Staining

As a basic wood stain or preservative we offer two coats of Cuprinol decorative preserver, Cuprinol Shades stain or Sovereign SX70 stain onto all external timber surfaces of the building prior to delivery to enable the preservative or stain to be applied to areas which can not be protected once the building has been constructed. The preservative or stain is applied directly onto the already pressure treated and base coat primed timber. The Cuprinol Shades wood stain is available in approximately 40 different opaque colours and the Cuprinol preserver and SX70 are available in approximately 6 different translucent colours.

Dulux Weathershield Preservative & Wood Stain (7-part application)

Dulux Weathershield Ultimate Opaque oil based wood preservative and stain, predicted to give up to 10 years protection. The process consists of washing all knots with mentholated spirits, applying two coats of knotting followed by two coats of base coat preservative and two coats of a coloured opaque stain onto all external timber surfaces of the building prior to delivery to enable the preservative/stain to be applied to areas which can not be protected once the building has been constructed. The preservative/stain is applied directly onto the already pressure treated timber. The Weathershield stain is available in over 200 different opaque colours.

Internal Lining & Insulation

Iso Wool insulation is fitted directly onto the internal membrane between the framework of the side walls and timber boarding of the roof. Two electric wiring rings (one for plugs and one for lights) are fed under the insulation and grouped together in a selected area in preparation for a certified electrician to connect to the mains supply. A 3/4" tongue & grooved 'V' board lining is secured to the framework of the side walls and roof. Cut outs for plugs and light fittings are provided with a loop of wire left slack in each opening. The standard floor is insulated with 1" thick sheets of Jablight onto which a 3/4" thick sheet of treated tongue & grooved chipboard is laid. A laminated floor is laid onto an underlay onto the chipboard. Architraves are fitted around the door and window frames and skirting boards are fitted around the edge of the floor.

Decorative Felt Roof Tiles

Black, green or red, square or shaped fire resistant felt roof tiles can be fitted directly onto the already felted roof to provide an additional decorative roof finish.

Cedar Roof Shingles or Slates

Black riven slates or treated cedar roof shingles are fitted onto pressure treated battens onto the already felted roof to provide an additional decorative roof finish. The cedar roof is finished with a cedar ridge copping and the slate roof is finished with a black concrete ridge copping. The roof must be pitched at 22 degrees for both the cedar shingle and slate roofs, the price allows for the additional trusses required to take the extra weight of the slates.

Guttering & a Down-Pipe

Black round guttering and a down-pipe can be fitted to each side of the roof eaves. The price quoted is for one side of the roof only.
