OVERVIEW

The straight ramp is a popular choice for its simplicity and ability to fit any size truck chassis from 7.5 tonnes to 32 tonnes. With a double bend beavertail and 2.5M length, this is ideal for most plant and access machines which do not struggle with steep gradients. The straight ramp style is suitable for machines such as Excavators, Boom lifts, Tractors, Dumpers. However low clearance machines such as scissor lifts and spider lifts are best loaded using the double flip ramps.

As standard the Sterling straight ramp system is available as two 1.0M wide ramps, leaving a 500mm gap between each ramp.

Another option is a 'full width' ramp, which is a safer solution when carrying narrower machines such as smaller scissor lifts and rollers. The full-width ramp is usually preferred by clients moving 3 wheeled fork lift trucks. It eliminates the risk of machines or personnel falling between the ramps.

To get the best of both worlds the straight ramp system is also available as a full-width ramp fitted with a 500mm gate in the centre, giving the luxury of both options; full-width for safety, the gate for maximum loading ability. A client will often position an excavator or cherry picker so that the boom sits through the gap in the ramps and maximizes deck space.

WHY CHOOSE STERLING?

1 THE HIGHER STANDARD

Our stringent Quality Assurance processes, combined with high quality materials and CE marked components, guarantee the reliability of the product and minimise down-time. Those exacting standards extend to our customer service too, the Sterling culture of integrity means responding quickly and keeping you informed at every stage of the process.

2 BUILT TO LAST

Our products are built using only the finest and strongest materials, finished off with a galvanising process that ensures they stand the test of time. This eliminates the need for costly maintenance, making the cost of ownership lower. It also means that many truck manufacturers value a truck fitted with a Sterling body with up to 10% higher residual value.

3 INSIGHTFUL INNOVATIONS

Intelligent additions, like our electro-hydraulically operated ramps, not only save effort, they save fuel too. That means lower operating costs overall. Or how about something you can't put a price on? The unique shallow loading angle of our cheesewedge ramp dramatically improves loading safety, giving you peace of mind.

4 SMART DESIGN

Intelligent innovations are made all the better when they are easy on the eye. Our clean aesthetics give a visual boost to your brand image, hiding ramps on our cheesewedge design and keeping overall clutter to a minimum.
