

All in one

Shemesh Automation is planning to launch a new fully automated canister packaging system, helping smaller wipe manufacturers enter the market.

X pander is 30 canister per minute system that will integrate filling, capping, sealing and stuffing functions all in a single line. The compact, mono-bloc design spans just 2 metres, perfect for cutting down on space and helping the company save energy. Promoted as an affordable investment for smaller businesses, the feedback on the X pander system here at the show is said to be very positive. Shemesh Automation is also using INDEX 14 as the platform to announce the sale of its 120 canister per minute Prudent Packaging Solutions for wet wipes to Jieya Tongling from China. The fully automated line produces rolled wipes in canisters at high speeds. The line is also available in 60 and 200 canister a minute versions. According to Shemesh Automation, the Prudent Packaging Solutions system is the only machine worldwide capable of processing the fluffy, elastic nonwoven raw material into a canister. The speed of the automated production is intended to help companies become more competitive and efficient. Big players are said to be particularly interested in these machines, eight of which have been sold since the system's roll out last year.

The company is also speaking to its customers here at INDEX 14 about its new website, www.sawetwipes.com. The only website in the world dedicated to round wipes in canisters, the site features product details and background on the wipes industry, as well as video and illustrations.

TENCEL® is shaping the future of wipes.

TENCEL® is a registered trademark of the Lenzing Group.

 TENCEL®

The quality of a wipe is highly influenced by the raw material. The choice of the botanic fiber TENCEL® enables you to act responsibly as it combines comfort with confidence and cleaning with caring. The smooth and gentle fiber structure considers the needs of sensitive skin or delicate surfaces and positively impacts liquid management. TENCEL® is based on the renewable raw material wood and supports you in your commitment for environmentally friendly products.

Botanic fibers make the difference from the very beginning.
