Traditional and Contemporary

WOOD AND MULTI-FUEL STOVES

Premium Quality Cast Iron & Steel Stoves

Welcome to Stovax, a company that has been dedicated to the development and manufacture of high quality, woodburning and multi-fuel stoves for over 30 years. Today, Stovax is home to one of Europe's leading ranges of stoves and fireplaces with models and colours to suit all types of interiors.

Authentic choice

There is nothing like the irresistible ambience of a real Stovax stove. Expertly crafted to be either traditional or contemporary in appearance with the flexibility and convenience required for modern living, they continue to offer discerning homeowners the best of all worlds. Whether you choose woodburning or smokeless fuel options they are clean burning, highly efficient and available in sizes and styles to suit most rooms and living spaces.

Cast iron or steel

Originally, all heating stoves, such as the Huntingdon range (illustrated on pages 14 - 23), were made from cast iron. Today, in spite of commercial steel production expanding from the late 19th Century onwards, cast iron remains the material of choice for many premium quality stoves. This is because of the way cast iron diffuses warmth giving maximum radiant heat over a period of time. Moreover, the iron can be cast more thickly in areas where greater strength is needed, whilst additionally allowing attractive designs to be cast into the stove panels.

However, in the 21st Century, modern manufacturing technology also permits the use of heavy gauge steel for the body of the stove with cast iron or steel doors and firebox components complementing it. Accordingly, both the more traditional Stockton and Riva Plus ranges (see pages 28 - 69) and the contemporary View & Riva Vision ranges (see pages 70 - 87) combine the advantage of both cast iron and steel, offering superb performance and value for money.

State-of-the-art Cleanburn technology

Most stoves in this brochure feature Cleanburn technology so they burn logs or solid fuels with outstanding efficiency*, resulting in more heat delivery into the room and less going up the chimney. It works by introducing pre-heated, secondary air into the firebox to burn the excess hydrocarbons in the smoke. Airwash air also helps keep the window clean, allowing you to enjoy the flames to the full.

CE Marked and HETAS Accredited

All Stovax stoves in this brochure are CE marked, and this is shown by the CE mark on their product pages. This means they have been independently tested to exacting European standards for both heating efficiency and emissions. They have also been accredited by HETAS[†], the UK's official body recognised by the government to approve solid fuel domestic heating appliances.

[†] High Output Boiler Stoves are subject to official listing.

Woodburning and solid fuel

All Stovax stoves are designed either for multi-fuel use, which means they burn logs, smokeless fuels or peat/turf briquettes, or as woodburners only.

Multi-fuel stoves have a riddling grate which allows ash to be riddled into a built-in ashpan to create the optimum conditions for efficient combustion. Woodburners have a fixed grate and no ashpan, since wood burns best on a bed of ashes.

Wood is better in environmental terms as the amount of carbon dioxide released into the atmosphere is approximately the same as that absorbed by the tree during growth. It is also a renewable resource, particularly when derived from plantations and cultivated woodland. For optimum results, we recommend

logs should be seasoned for 2 years or more to achieve a moisture content below 20%*. This will not only give a higher output than that of freshly felled timber but help avoid a build up of tar in your flue. Furthermore, if you can obtain hardwood logs this is better still, as they will have a greatly increased calorific value of softwoods for the same volume.

* All efficiencies quoted in this brochure are when tested to European standards for seasoned wood with a moisture content of less than 20% or for approved smokeless fuels

In rural areas, Stovax stoves have a particular advantage as they allow homeowners to burn readily available log supplies from local sources. Indeed, if you are a farmer, smallholder or landowner your fuel could even be free!

Woodburning efficiency can even be achieved in the most urban environments with our extensive range of Smoke Control Area approved stoves. Please see page 5 for further details.

Just as importantly, if you choose a Stovax stove with a boiler option, you can even provide yourself with domestic hot water or run radiators from the same fire. Please see page 4 for further details.

Five Year Extended Warranty

As outlined on page 104, your Stovax Expert Retailer will provide you with a Five Year Extended Warranty for your new solid fuel stove, provided your stove is registered with Stovax. Please note, this warranty excludes certain consumable parts. Stoves purchased outside of Stovax's Expert Retailer Network will carry a standard 1 Year Warranty. Full warranty terms & conditions are available to view at www.stovax.com

Stovax boiler stoves for complete home heating

Four models within the Stockton range, along with two contemporary View models, have been specifically designed to supply your domestic hot water and central heating requirements or even augment your existing heating system.

Hot water, radiators and underfloor heating

Stovax offer a selection of Multi-fuel and Woodburning High-output Boiler models that come with the boiler built in.

If you choose a stove with an integral High-output Boiler, you can not only supply yourself with domestic hot water but even run your radiators all from the same appliance.

Alternatively, you can 'link up' a Stovax boiler stove with your conventional oil or gas fuelled central heating system. This 'link up' system will not only reduce reliance on your heating being provided from a single fuel source but, if burning wood, will also make your heating better for our environment through lower carbon emissions. 'Link up' can also connect with gas or oil, sealed heating systems, combi's, underfloor heating, advanced electronic controls and solar panels to make even more flexible systems.

Further information about stoves with boilers is given on pages 94 - 99. Stovax also produces a 'link up' guide which shows how to 'link up' your solid fuel boiler with other heat sources, providing examples of typical arrangements and frequently asked questions. For more details, see our link up technology guide at **www.stovax.com/linkup**.

Clean Air Act compliance

Expert Retailer Network

Approved for Smoke Control Areas

Most town and city homes are located in Smoke Control Areas as designated by the Clean Air Act 1993. To burn logs on a stove in these locations, the model installed must have been granted exemption from the regulations by the government through DEFRA.

This exemption is given only to appliances which have been independently tested to demonstrate particularly clean burning combustion. Many stoves in this brochure are approved for use in Smoke Control Areas (when the appropriate smoke control kit is fitted and used in accordance with the product operating instructions) and this is shown on each product page. Your Stovax retailer can give you further help and advice.

See our stoves in your area

We take great care to ensure that our stoves are designed, tested and manufactured to the highest possible quality and safety standards. We are just as concerned to make certain that they are sold and installed correctly so that you enjoy years of pleasure from your purchase.

Accordingly, you will find our products are only available from experienced, independent retailers who will be happy to show you a selection of models locally in their showrooms, often fully operational. These independent retailers will discuss your individual requirements both technical (such as sizing the heat output to your room and advising on your flue type) and design, and ensure that you select the most appropriate product for your home. They will also be able to advise on, or assist with, the installation process as well as help provide any after-sales support and servicing your appliance may require in the future.

Whilst we encourage our retailers to promote fireplace products and their outlets via the internet, we do not believe suitable levels of customer care and satisfaction can be obtained from purchasing the product only online and we would strongly recommend that you consider this when undertaking your research and making a purchasing decision. Furthermore, please be aware that we do not offer technical support (beyond our statutory responsibilities) to products bought via nationwide online sales, where this support would normally be offered by one of our qualified, independent retailers.

In addition, Stovax stoves purchased from within our Expert Retailer Network will have the additional benefit of an extended warranty period, subject to terms and conditions. Full details can be found at **www.stovax.com**.

Cast Iron Stoves

Wood and Multi-fuel

Every stove in this section is manufactured from cast iron. This is the traditional way of making premium quality stoves due to the way cast iron diffuses heat. Another advantage is that the iron can be cast more thickly in areas where greater strength is needed. It also has sculptural qualities, allowing attractive designs to be cast into the stove panels.

Airtight Construction

All Stovax stove doors, except the Regency, have airtight seals which permit airflows to be precisely controlled. This allows both the heat output and refuelling frequency to be varied and helps maximise burning efficiency.

Perfect Flame Control

The triple air system in certain stoves also allows complete control of the flame picture. From a deep glow, with minimal flames, it takes only a few seconds to fill the firebox with swirling flames from the fuel and jets of flames from the Cleanburn ports.

Enamel Stoves

Enamel is a very thin coating of coloured glass which is fired at over 800°C on to a metal surface. To achieve its translucent and lustrous finish, each casting is especially designed for enamelling and is coated and fired twice. Enamel is an option on many stoves, and available in the three colours shown opposite.

Triple Air Systems (Cleanburn technology)

Several Stovax stoves incorporate triple air systems to provide a cleaner burn, greater thermal efficiency and control of the flame picture as follows:

- Airwash air is drawn down over the inside of the 1 window to keep the glass clean and clear. It is also used as primary combustion air when burning wood.
- 2 Primary air for use with solid fuel, also used to start wood fires but not normally used once a wood fire is burning.
- 3 Cleanburn secondary air is pre-heated as it passes through a heat exchanger chamber within the firebox. It is then drawn into the smokestream, where it combusts unburnt hydrocarbons to provide a cleaner burn and greater thermal efficiency.

Brunel 1A

Ideal for smaller rooms, the Brunel 1A is the smallest stove in the Stovax cast iron range and is designed to fit into a standard 22" high British fireplace. Nonetheless, this model still features airwash to help keep the glass window clear, full multi-fuel capability and an externally operated riddling grate.

Brunel 2CB

The Brunel 2CB will bring you extra heating efficiency and economy with the use of the Stovax Cleanburn System. In fact, this neat little stove incorporates all the state-of-the-art features you would expect from Stovax's advanced designs. For example, the stainless steel baffle warms up more quickly than cast iron so it starts working more rapidly, setting new standards in performance.

20

IN IT AN

The biggest model in the Huntingdon range – and the most powerful. With up to 9kW of heat output, the 40 is equally at home in both traditional inglenook and modern fireplace settings. You can choose from either the woodburning version with flat cast iron base plate or the multi-fuel version with external riddling and concealed ashpan. Also, do not forget to opt for matching flue pipe, particularly when installing your stove in an inglenook.

Sheraton

With clean classical lines and extra large thermal glass windows, the Sheraton is ideal for use in traditional or modern settings. Its rear flue exit will also fit into a standard British fireplace opening. The stove is offered with different grate and thermostat options and a matt black finish. The firebox has a large capacity and uses vermiculite fire bricks; these, together with the advanced aeration system, help to produce a very clean burn with lower environmental pollution. The aeration system also incorporates a very effective airwash system to keep the windows clean.

The thermostat and extending riddling lever are discreetly located behind the stove. When not in use the extension slides out of sight, over the main riddling lever. The thermostat is also concealed behind the stove and only the control lever is visible from the front.

Regency

Originally patented in 1742 by Benjamin Franklin, the Regency enjoys a pedigree unmatched by any other stove. It was designed at a time when America was still a British colony and its proportions were undoubtedly influenced by Franklin's extended visits to Georgian London. With the doors open and a fire burning, the Regency's large firebox produces the atmosphere of a traditional open fireplace.

The Regency is supplied in two sizes. A pair of polished brass balls are supplied with each stove and a brass rail set is available as an optional accessory. Cast into the side panel of every Regency is a support bracket into which an optional barbecue or bean pot may be fixed. Both of these are manufactured from cast iron and the bean pot is supplied complete with a swinging arm which fits into the support bracket.

Steel Stoves

Wood and Multi-fuel

Combining cast iron for the airtight doors and main firebox components with heavy gauge steel for the body, the Stockton and Riva Plus stoves benefit from both materials with enhanced performance and combustion control as well as value for money. Stovax's triple air systems also provide powerful and swift control over the heat output as well as outstanding views of the flames.

Stockton Stoves - pages 32 - 61

With eight sizes, each available in four colours, and some models having a further choice of door styles and canopies, there is a Stockton stove to suit any home. Furthermore, there are inset versions, double sided versions and even boiler versions, so whether traditional or modern, large or small, in country or town, burning wood or solid fuel you should find a Stockton to match your setting.

Riva Plus Stoves - pages 62 - 69

The versatile Riva Plus range comes in a choice of four sizes offering heat output from two to 11kW. Available as either woodburners or with the capability to burn smokeless fuel, the range can be personalised with the addition of a low or high canopy as well as removable window crosses for all but the smallest size. The Riva Plus also benefits from a boost setting for lighting and refuelling as well as other innovative design and performance features.

Steel Contemporary Stoves - pages 70 - 91

In addition to Stovax's traditional steel stoves there is also a large range of contemporary models such as the striking Riva[™] Vision and View stoves.

State of the art functionality is combined with contemporary styling creating a striking centrepiece at the very heart of your home.

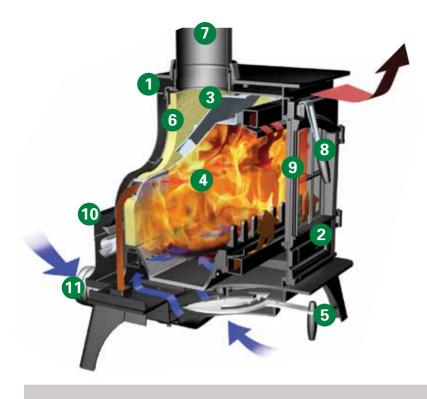

Stunning flame effects due to Cleanburn technology

The triple air systems incorporated in Stockton and Riva Plus stoves combine to provide superb flame control and exceptional views of the fire, so you can also create different ambiences to suit your mood. From a deep glow with minimal flames, it takes only a few seconds to fill the firebox with swirling flames.

Stockton 5 Multi-fuel burning logs. Shown with Pembroke Mantel from Stovax

Riva Plus Design Features

- 1 Heavy duty steel body.
- 2 Airtight cast iron door.
- 3 Stainless steel baffle.
- 4 Heated air jets from cleanburn ports burn hydrocarbons in smoke.
- **5** Single lever for control of cleanburn combustion and airwash system.
- 6 Firebrick lining.
- 7 Top or rear flue exit connecting stove to flue pipe.
- 8 Removable tool to operate door handle.
- **9** Removable 'window crosses' for clear window.
- **10** Integrated Warm Air Convection System, with Fan assisted option available.
- **11** Optional external air facility for draught reduction.
- **12** Optional Smoke Control Kit available on most models (not illustrated).
- 13 Low and high canopy options (not illustrated).

Steel Stoves

Key Features

Stockton Design Features

- 1 5mm heavy duty steel body.
- 2 Cast iron airtight door with primary air control slider.
- **3** Cast iron fireback incorporating heat exchanger for Cleanburn system.
- 4 Heated air jets from Cleanburn ports burn hydrocarbons in smoke.
- **5** Airwash control slider to maintain a cleaner glass window including a boost setting on the Stockton range.
- 6 Riddling (multi-fuel versions).
- 7 Top or rear flue exit connecting to stove flue pipe.
- 8 Firebrick lining.
- **9** Adjustable secondary air on Stockton stoves, giving greater control when burning different fuel types.
- **10** The Stockton has a retaining lip on the pan design to increase ash reduction and a runner system to ensure smooth removal and replacement when emptying.
- **11** The solid plate log guard on woodburning Stockton models prevents ash spillage (not illustrated).
- 12 Specially developed, integral boiler versions available (see pages 94 97).
- 13 Stockton Universal tool (see right).
- **14** Optional smoke control kit (not illustrated) available on most models to allow them to be used in smoke control areas.

Stockton Universal Tool

This fits over the stove handle to provide additional leverage and easier usage when the handle is hot as well as ash pan lifting and stove riddling on Stockton models.

Stockton 3

The mini stove of the Stockton range is specifically designed to fit neatly into a standard 22" (560mm) high x 16" (405mm) wide British fireplace opening with the chairbrick removed. It has full multi-fuel capability and its compact dimensions make this stove equally suitable for houseboats, summerhouses and garden workshops.

Stockton 5 Midline

As an alternative to the standard Stockton 5, you can choose the Midline version. This design offers a more integrated, look that is particularly suited to modern interiors yet still provides all the benefits of the original model.

**For more information on room vents, please see page 104

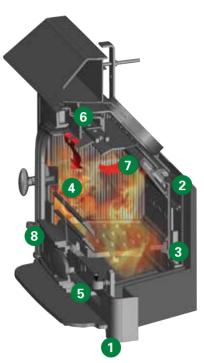

Design Features

- **1** 5mm heavy duty steel body.
- 2 Easy fit.
- **3** Specifically designed for 16" or 18" Milner brick openings.
- 4 Cast Iron Side Panels.
- **5** Cast iron air-tight door with primary air control lever.
- 6 Airwash to maintain a cleaner glass window.
- 7 Heated air jets from Cleanburn ports burn hydrocarbons in smoke (internal).
- 8 External riddling lever.

Stockton Milner

The Stockton Milner has been specifically designed to fit into a 16"- 18" wide and 20"- 22" high fireplace without the Milner brick needing to be removed. This means that it can be easily secured and sealed into an existing chimney without the requirement for any building work making it cheaper to install. More efficient than an open fire, the Stockton Milner gives you greater control of combustion, more heat for your money and therefore lower fuel costs. Features of the Stockton Milner include, easy fitting, multi-fuel with external riddling, a convection system and Cleanburn & Airwash.

The superb combination of size and heating capacity make the standard Stockton 6 particularly versatile. It is produced as a woodburning stove (easily adapted to multi-fuel use with the optional riddling grate kit) or as a dedicated multi-fuel version with external riddling. Alternatively, you can choose the multi-fuel Stockton 6 Highline version (see pages 44-45) - a stove that provides an impressive focal point in kitchens and open plan rooms. All models also accept the optional 'clip-in' steel boiler - this will provide an abundant supply of domestic hot water during the winter months.

The larger, but perfectly proportioned dimensions of the Stockton 7 make it an ideal choice for grander rooms. With significant heating potential of up to 7kW, it is easily capable of providing warmth and ambience to even the loftiest of spaces. Available as a solid fuel or woodburning appliance, the Stockton 7 can take logs up to 12¾" (325mm) in length meaning less work is required to prepare the fuel for your stove.

 - External riddling lever.
- 8 High output boiler version also available.
- 9 Optional smoke control kit available (not illustrated)

Stockton 7 Inset Convector

The Stockton range has been developed to offer you an inset convector fireplace with most of the heating advantages of a freestanding Stockton stove. With its cleverly designed Cleanburn and convection systems, the Stockton 7 Inset Convector is around four times more efficient than an open fire; giving you greater control of combustion, more heat for your money and lower fuel costs. There is also an integral boiler version which produces up to 25,000 BTU's of hot water (see pages 94 - 97).

The Stockton 8 offers you greater choice and more optional features than any other model. There is also a space-saving Slimline version (see page 53) which is 3" (75mm) shallower; this means that in many cases less building work will be required to install the stove as it could slot directly into your existing fireplace opening and, although smaller, will take logs up to 15% " (400mm) long. Choose from a single or two door model, the latter of which is available with a handy cast iron tool (not shown) that locates over the keystone catch and then rotates to open or close the doors. To complete its versatility, the Stockton 8 is also offered with an integral boiler which produces up to 34,000 BTUs of hot water; for more information about our boiler stoves please see pages 94 - 97.

Stockton 8 Inset Convector with flat top, shown here in Matt Black burning logs. Pembroke surround also by Stovax.

Design Features

- 1 5mm heavy duty steel body.
- 2 Easy fit flue connection through stove.
- 3 Vermiculite, thermal brick liner system.
- 4 Cast iron air-tight door with primary air control lever, clearly labelled and with a smooth trajectory for ease of use.
- 5 Airwash control lever and boost setting to maintain a cleaner glass window.
- 6 Heated air jets from Cleanburn ports burn hydrocarbons in smoke.
- 7 External riddling lever.

Stockton 8 Inset Convector

Not only will this convector fireplace provide impressive heating capacity compared to a standard open fireplace, but it also offers you most of the benefits of our freestanding Stockton 8 Stoves. The Stockton 8 Inset is highly practical too. It has full multi-fuel capability with external riddling, double doors for easy loading and both Cleanburn and convection systems for greater heating efficiency, whilst the highly effective airwash facility ensures that you enjoy a clearer view of the fire.

The larger sized Stockton 11 offers up to 11kW heat output and has a choice of flat top, low or high canopy, single or double door versions and four colour options. The Stockton 11 can look at home in a modern open plan house or equally in a large inglenook of a country cottage. Furthermore, the vast firebox is designed to accept logs up to 500mm long, so you do not need to load fuel so often!

Stockton Double Sided

Enjoy twice the comfort and twice the view of your fire with a Stockton double sided stove. Using one central chimney, the doors to both the back and the front of the stove are designed to open into adjacent rooms. So, compared to individual stoves in each room, you have less work refuelling and even more of a focal point to your home.

There are two sizes of stove from which to choose - Stockton 8 Double and Stockton 11 Double. Although this double sided configuration does not allow the incorporation of full Cleanburn technology, both stoves still include an airwash system to keep the glass clean. The smaller Stockton 8 Double will provide you with a significant heat output, up to 9kW, whilst the Stockton 11 Double produces an even more powerful 11kW.

Contemporary Stoves

Wood and Multi-fuel

Pairing the latest firebox technology with the best of modern design, Stovax offer an extensive range of contemporary stoves. Triple air systems provide a clean burn and ultimate control, as well as outstanding views of the flames. With woodburning and multi-fuel models available, you are sure to find a stove to transform your living space.

View Stoves

As stylish as it is flexible, the View is available in three freestanding sizes, as well as an inset model and a Midline version with an integrated log store. The View range is further extended by two high output boiler models, which are capable of supplying up to nine radiators, as well as heating to the room in which they are sited, providing complete home heating.

View 5

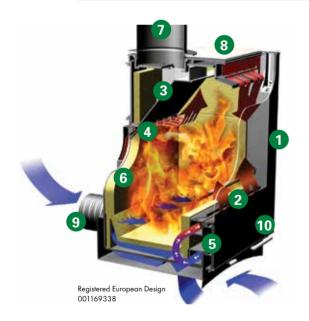

View Design Features

- 1 5mm heavy duty steel body.
- 2 Cast iron airtight door with integrated primary air control slider
- 3 Cast iron fireback incorporating heat exchanger for Cleanburn system.
- 4 Heated air jets from Cleanburn ports burn hydrocarbons in smoke.
- **5** Integrated Airwash control slider to maintain a cleaner glass window.
- **6** Riddling with removable tool (multi-fuel versions).
- 7 Top or rear flue exit connecting to stove flue pipe.
- 8 Firebrick lining.
- 9 Optional glass top plate
- **10** Integral glass fronted plinth.
- 11 Specially developed, integral boiler version (see page 98).
- **12** Cleanburn air control ports (not illustrated). These are on the rear of the stove and pre-set in the factory.
- 13 Optional smoke control kit (not illustrated) on most models
- **14** Stainless steel fire tools included.
- 15 Optional contemporary stove benches (see page 105).

Riva Vision Stoves

With their sleek black glass finish, Riva™ Vision stoves are at the forefront of contemporary style. Available in three sizes of both woodburning and multi-fuel models, the Riva™ Vision is equally at home freestanding on a hearth or mounted on a stove bench.

Riva Vision Design Features

- Heavy duty steel body 1
- Airtight contemporary glass door. 2
- 3 Stainless steel baffle.
- 4 Heated air jets from Cleanburn ports burn hydrocarbons in smoke.
- 5 Single lever for state-of-the-art control of cleanburn combustion and airwash system
- 6 High density, thermal brick liner system
- 7 Top or rear flue exit connecting stove to flue pipe
- 8 Optional ceramic glass top plate
- 9 Optional external air facility for draught reduction
- 10 Stainless steel controls and log guard
- 11 Optional Smoke Control Kit (not illustrated)
- 12 Optional contemporary stove benches (see page 105).

Riva Vision Midi

Riva and Studio Freestanding Stoves

Additionally, Stovax offer a further two ranges of contemporary wood and multi-fuel stoves, perfect for the most modern of interiors.

Cutting edge in both form and function, the Riva Freestanding and Studio Freestanding have been designed to create a striking centrepiece at the very heart of your home. For further information see pages 88 - 93.

Riva F66 Freestanding

Studio 3 Freestanding

View 3 Multi-fuel burning logs, on stove bench 100 high.

View 3

Offering a more contemporary slant to our wide choice of steel stoves is the new View range. Although designed to be installed into a standard 22" (560mm) high x 16" (405mm) wide opening with the chair brick removed, it is just as attractive freestanding on a hearth or stove bench. This compact View 3 stove offers you multi-fuel capacity and high efficiency heating. The beauty of this stove can be further enhanced by adding the new high-gloss flue pipe; see page 102 for further details.

View 5 Midline

To give you a further styling option, the View 5 is now available in a new Midline format. Providing all the heat outputs and efficiencies of the standard View 5, the Midline includes an integral log store base providing additional height and presence to this contemporary and versatile stove, giving an even better view of the stunning flame picture.

Design Features

- 1 5mm heavy duty steel body.
- 2 Easy fit flue connection through stove.
- **3** High density, thermal brick liner system.
- 4 Cast iron air-tight door with integrated primary air control slider.
- **5** Integrated Airwash control slider to maintain a cleaner glass window.
- 6 Heated air jets from Cleanburn ports burn hydrocarbons in smoke.
- 7 High output boiler version also available.
- 8 Optional top glass plate.
- 9 Riddling system.

View 7 Inset Convector

The contemporary View stoves range has been expanded to include an inset convector fireplace offering many of the heating advantages of a freestanding stove. Incorporating Stovax's exceptional Cleanburn and convection systems, the multi-fuel View 7 Inset Convector provides up to 4 times more heating efficiency than a standard open fire; giving greater combustion control, increased heat outputs and lower fuel costs. An integral boiler version is also available, producing up to 30,000 BTU's of hot water (see pages 98 - 99).

View 8

The largest of the View range, the View 8 is designed to provide high efficiency heating for contemporary homes as well as creating an outstanding focal point for your living space. Choose from either the woodburning only model or the multi-fuel version, the latter incorporating a riddling grate to allow you to burn smokeless fuels. An optional glass top is also available to complement the glass on the plinth beneath the stove as well as an integral boiler version capable of producing up to 34,000 BTU's of hot water (see pages 98 - 99).

Riva Vision Small

The compact and sleek look of the Riva[™] Vision Small encapsulates the defining characteristics of this range of contemporary stoves. Featuring a stunning black glass door that gives you the best possible view of your fire, this stylish stove will give a generous heat output of up to 5kW. With many optional extras available such as the Ceramic Glass Top or Riva[™] Plinth with matching glass front, your styling possibilities are extended even further. For a compact stove, the Riva[™] Vision Small makes a big impact.

Riva Freestanding

Finished in your choice of Jet Black Metallic or Storm Metallic, the three Riva[™] Freestanding stoves are truly distinctive in appearance, with exceptional heat outputs and amazing ease of control. These striking stoves offer all the cutting-edge features you would expect from a modern stove, including the very latest Cleanburn combustion systems.

More information on the Riva[™] Freestanding stoves and their built-in counterparts is available in a separate, dedicated brochure which can be requested from your local retailer, or viewed online at www.stovax.com.

Studio Freestanding

The magnificent Studio range offers a new dimension in woodburning fires, with unparalleled widescreen flame views. Whether placed in a cosy inglenook or standing boldly in the room, the Studio Freestanding fires provide a sublime statement in living spaces of all proportions. Further complemented by additional options including a black glass top plate and decorative square flue cover, these fires are at the pinnacle of contemporary tastes and fireplace technology. For further Studio Freestanding information, please see overleaf.

Studio Freestanding Benches

To assist designers and homeowners in creating a flexible alternative to the 'on hearth' mounting of Studio Freestanding, Stovax offers eight sizes of Bench to which the stoves may be secured.

Standing 250 or 350mm high with a sturdy steel construction and durable black finish, you can not only match the Bench to the space available but you can also accomodate individual styling requirements by positioning your Studio centrally on the bench or offset to one side.

For more information you can request a separate brochure from your local expert retailer, or alternatively visit www.stovax.com to view the dedicated brochure online.

Built-In Fires

In addition to the Freestanding versions shown on pages 88 - 92, the Studio and Riva[™] fires are also available as a range of stylish built-in models at the forefront of 21st century design. With both woodburning and multi-fuel options, the Riva[™] and Studio built-in fires offer all the appeal of a traditionally fuelled fire, but with sleek contemporary designs and exemplary technological features. Each range offers a wide choice of sizes and complementary frame styles, allowing you to find the perfect built-in fire for your home.

More information can be found in our separate brochures for these ranges which can be requested from your local retailer or can be viewed online at www.stovax.com.

High Output Boiler Stoves

Four models within the Stockton range, along with the View 7HBi and 8HB from the new contemporary View range, have been specifically designed to supply your domestic hot water and central heating requirements or augment your existing heating system via 'link up' technology. Whatever your choice, you will enjoy all the atmosphere of a real fire plus exceptional heating performance throughout your home.

When providing hot water and central heating, each stove is capable of feeding an average 8,000 BTU hot water cylinder and depending on the model, up to 19 radiators. The exact number of radiators will depend upon how many rooms you wish to heat and the sizes of those rooms. Radiators also come in a variety of sizes/capacities. For example, a typical 400mm high x 1000mm wide, single panel radiator requires 2500BTU/ hr. You should always consult a qualified solid fuel heating engineer to ensure the stove can meet your requirements.

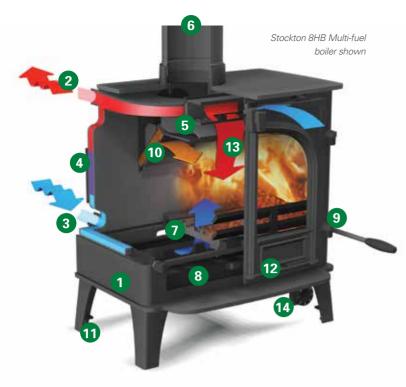

Alternatively, you can 'link up' a Stovax High Output Boiler with your existing or proposed heating system to reduce your reliance on gas or oil and help decrease overall heating fuel costs. There are ways to link with conventional oil or gas central heating, gas or oil sealed heating systems, combi boilers, underfloor heating and even solar panels to provide flexible, cost-effective solutions. Stovax produces a 'link up' guide showing typical arrangements and covering some frequently asked questions. You may find it useful to download this from **www.stovax.com/linkup** before discussing your requirements with a qualified heating engineer.

Stovax HB boiler stoves are designed for multi-fuel use and incorporate a riddling grate. This is because smokeless fuels tend to provide greater calorific values. However, should you wish to reduce your CO₂ emissions then you can also burn a combination of smokeless fuels and logs together. Should you prefer to burn wood only, you can still achieve good performance but, as logs burn best with slightly different firebox characteristics, we recommend you purchase the optional log tray or the new dedicated woodburning only models for the Stockton 11HB and 14HB.

Stockton Boiler Stoves Design Features

- 1 5mm and 10mm heavy duty steel body
- 2 Excellent heat output to water when burning solid fuels or wood
- **3** 4 x 1" BSP boiler tappings for flexible, efficient connection to your hot water circuits
- 4 Extensive water jacket on 4 sides for maximum transmission of heat to water
- 5 Highly developed boiler flue baffle system ensures maximum heating efficiency
- 6 Top or rear flue exit (7HBi top exit only)
- 7 Specially designed reciprocating grate ensures effective removal of ashes*
- 8 Large ash collection tray
- 9 Discreet external riddling socket with removable tool*
- 10 Unique heated air jets from cleanburn ports burn hydrocarbons in smoke. (UK Patent Application GB2495920)
- **11** Levelling system in each foot to ensure stability on uneven surfaces
- 12 Primary air controls to manually adjust the running temperatures
- **13** Airwash system with boost setting to help keep glass clear and controls the running temperature when burning logs
- 14 Thermostatic control to maintain desired running temperatures
- 15 Optional woodburning tray for multi-fuel models (not illustrated)
- * Multi-fuel models only.

Electric Stoves

Several of the stoves in this brochure are also available as electric versions. Simply plug in and switch on for that 'real fire' look, brought alive with unique VeriFlame[™] technology which provides a combination of flame speed and glow level. The individually hand-painted 'logs' perfectly mirror the atmosphere and attraction of a real woodburning stove.

Operation is simple too as the stove's remote control not only allows VeriFlame[™] selection but also adjustment of the heat combinations. The amount of heat produced can be altered between 1kW and 2kW depending on the warmth required. You can even enjoy the flames without heat!

For more details, please see the latest 'Electric Fires & Stoves' brochure which features an exciting range of both traditional and contemporary electric fires and stoves. The brochure is available from our sister company, Gazco, and can be requested from your retailer. Alternatively, you can view or download the complete range online by visiting **www.gazco.com** or scanning this QR code with your mobile device.

Flue Pipe

Matching Matt Black and Coloured Enamel Flue Pipe

For the fully colour co-ordinated installation of your Brunel or Huntingdon stove and optimum performance, we offer high quality matt black, gloss black and coloured enamel flue pipes. Brunel 1A, Brunel 2CB, Huntingdon 25 and Huntingdon 28 connect to a 5" flue pipe, while the Brunel 3CB, Huntingdon 30, Huntingdon 35 and Huntingdon 40 connects to a 6" flue pipe. All components are listed in the table.

For Regency and Sheraton flue pipe, please refer to pages 108 - 109.

For View flue pipe, please refer to pages 110 - 112.

For Riva Vision flue pipe, please refer to pages 112 - 113.

For Stockton flue pipe, please refer to pages 113 - 119.

For Riva Plus flue pipe, please refer to pages 120 - 121.

Owing to different production processes, we cannot guarantee a perfect match between pipe and stove.

Accessories, stove care and important technical information

Care of Your Stove

To help you get the best performance from your stove and keep it in good condition, inside and out, Stovax offers a wide range of cleaning and maintenance products. Stovax also supplies a wide variety of fireplace accessories. Your Stovax retailer will be able to give you full details or you may view the complete range at **www.stovax.com**.

Product Improvement and Warranty

Stovax pursue a policy of constant product improvement. Products supplied may therefore differ in specification from those illustrated or described in this brochure, and you should always check the final specification with your Stovax retailer.

Your Stovax Expert Retailer will provide you with a Five Year Extended Warranty for your new solid fuel stove, provided your stove has been registered with Stovax. Please note, this warranty excludes certain consumable parts and is dependant on your appliance being serviced by an appropriately qualified person 12 months after installation and annually thereafter. Stoves purchased outside of Stovax's Expert Retailer Network will carry a standard 1 Year Warranty. Full details of this warranty is set out to view on our website at **www.stovax.com**.

Important Safety & Technical Information

We recommend that a HETAS approved installer should undertake a site survey prior to purchase and it is a requirement that any Stovax Stove should be installed by an appropriately qualified HETAS approved installer.

All fires and stoves consume air as they burn. To comply with Building Regulations (Document J) you may need to install a fixed air vent to ensure adequate ventilation. A room vent is not normally required when the air permeability is greater than 5.0m³/hr/m². Your Stovax retailer or HETAS installer will be able to advise on this. Furthermore, by law all installations also require a Carbon Monoxide monitor (such as product code 3045 available from Stovax).

You can also download detailed installation instructions prior to purchase from **www.stovax.com**.

Please note that all parts of these stoves, particularly the glass panel in the door, become extremely hot during operation and can result in serious injury and burns if touched. It is therefore recommended that a fireguard complying with BS 8423:2002 is used in the presence of young children, the elderly or infirm.

Stovax Heat Shields

Stovax has introduced a range of highly effective Heat Shields for the Stockton, View and Riva Vision stove ranges. These fantastic additions will allow a reduction in the distance to combustible materials at the rear and sides of the stoves as shown right. The Stovax Heat Shields not only maximise the available space within the room, but they also enable you to accomodate a wider range of materials in your interior design. For more information, please speak to your local Stovax retailer.

Stove	Product Code	Distance from rear	Distance from sides
Stockton 3	ST3HSK	350mm	150mm
Stockton 4	ST4HSK	350mm	150mm
Stockton 5 / 5ML	ST5HSK	250mm	150mm

Stove Benches

These versatile steel benches are compatible with the freestanding contemporary stoves shown within this brochure. With five widths and two heights, they offer infinitely greater design possibilities to accommodate your individual styling requirements. You can even use the space beneath for log storage!^A

Design Features

Sturdy steel construction
Choice of 5 widths and 2 heights
Durable matt black finish
High: 450/1000/1200/1400/1800 x 350 x 420/465*mm (wxhxd)
Low: 450/1000/1200/1400/1800 x 250 x 420/465*mm (wxhxd)
Proportioned 60mm wide legs

Allows for central or offset stove positioning

Key Facts	Low	High
Stove Bench 45 ^{$+$}	RVACLB45B	RVACB45B
Stove Bench 100	RVACLB100B	RVACB100B
Stove Bench 120	RVACLB120B	RVACB120B
Stove Bench 140	RVACLB140B	RVACB140B
Stove Bench 180	RVACLB180B	RVACB180B

 † Suitable for View 3 & 5, Riva F40 and Riva Vision Small & Midi only. Δ Logs are not to be stored directly beneath the stove position.

* A depth of 465mm applies to the 180 bench only.

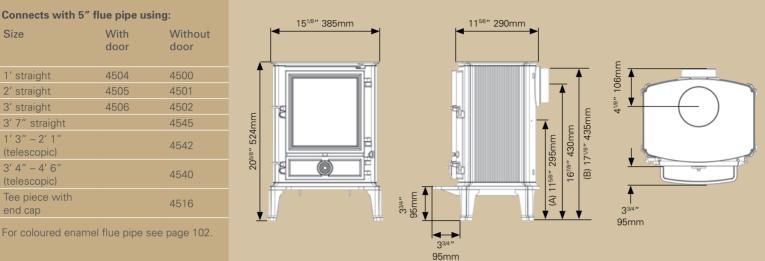

Dimensions and Flue Pipe

The flue pipe connects your stove to the existing/new chimney system. The chimney system must meet the requirements of Building Regulations (Document J) and the stove fitted in accordance with the detailed installation instructions provided with each unit. You may also download these instructions prior to purchase from **www.stovax.com**.

Professional XQ[™] Chimney Systems

Stovax also offers a comprehensive range of stove & fireplace chimney systems, the Stovax Professional XQ[™] collection. Crafted from 304L grade stainless steel for a durable outer finish, the fully sealed components offer water tight protection for the insulation within.

With innovative decorative options, the ability to specify a colour for your system and with a host of technical advancements such as their Twist-Lock system, the Professional XQ[™] range provides an attractive, versatile and reliable solution for your flue system. Furthermore, the Professional XQ[™] range carries a 10 year conditional warranty offering complete peace of mind.

For further information or to request a brochure, simply contact your local retailer or visit www.stovax.com/chimneysystems.

Classic Fireplaces

Whether you want to restore a period house to its former glory or create an authentic look for a more modern home, you can be confident that Stovax's Classic Fireplaces take their inspiration from genuine 19th Century designs. We also pride ourselves on the fact that each remains an individual masterpiece, hand-cast to the same specification as Georgian and Victorian originals, and extensively finished to display a wealth of intricate detail.

Alternatively, we also offer fireplaces with the most up-to-date design to complement modern interiors. In several cases, Stovax have added a 21st Century slant to the design to make them even more appropriate to today's homes and lifestyles.

For further information or to request a brochure, simply contact your local retailer or visit **www.stovax.com**.

Details on the full range of products available and brochure PDF's can be found at the websites detailed above. Alternatively, you can scan this QR code or visit **www.stovax.com** to view our whole range of brochures.

Brochure Photography

All of the flame pictures shown in this brochure are taken from real fires. Please note however that flame pictures will vary depending on the exact fuel used, flue conditions and surrounding geographical features. Some of the photography in this brochure may not appear to comply with the requirements of the latest Building Regulations and you should always check your proposed installation arrangement with your HETAS trained installer before proceeding. Certain settings in this brochure are dependant on the use of heat shields to reduce the required separation from combustible material.

Stovax gratefully acknowledges the assistance of the following companies with photographic settings:
