Scalable, Reliable, Secure

From rescuing obsolescent warehouse control systems and retrofitting legacy systems to the latest warehouse controls software, Conveyor Networks can optimise the automation performance in most conveyor systems.

An end to end view from automation to ERP can be achieved with our own warehouse software platform. imio software provides a real time interface between automation and host IT systems.

> Conveyor Networks has proved an excellent partner in this respect. We operate a 6-day week and they provided skilled technical leadership and the flexibility to work alongside our existing software with all on site implementation and testing taking place out of hours. We are now realising the benefits of the latest controls technology.

Connect

Optimising System Performance

From 24/7 emergency cover to ongoing maintenance, we support each customer to get the most out of their automation solution. Our support, maintenance and spare parts packages can help you avoid unexpected downtime and disruption, saving your business money and time.

Efficient Stock Control…

- ■ **Reduced cost** of operations
- ■ **Increased** efficiencies
- ■ **Decreased** errors
- ■ **Improved** customers experience & satisfaction

Complemented by our sister company imio Software Solutions, experts in warehousing and fulfilment software, Conveyor Networks is able to offer a unique proposition of smart, affordable and seamless supply chain integration solutions. With Industry 4.0 revolutionising the sector, we are developing software-driven solutions via, VR, AR and Demo 3D, which allows us to understand what is happening in the warehouse in real-time. This, supported by imio's high level software, which integrates seamlessly with host IT systems, provides great usability and real time warehouse communication.

Conveyor Networks alongside imio is the only truly independent offering at this scale, providing a single source supply of automation services and advanced software solutions.

imio software solutions   Visit: **imiosoftware.co.uk** for more information.

> Imio is a very user friendly application and our operators were competent within hours! Conveyor Networks delivered a solution bespoke to our requirements and we are fully recognising the benefits.

Independent Advice...

With 10 years' experience in electrical, mechanical and control systems, as well as software development, Conveyor Networks provides expert technology solutions primarily, but not exclusively, to the ecommerce/retail and FMCG logistics marketplaces.

As systems integration specialists, we provide impartial and honest solutions for customers' businesses and budgets, which make a difference to both throughput and ultimately bottom line.

> We have a really good working relationship with Conveyor Networks. The project at our distribution centre in Stoke involved delivering modifications to our existing conveyor system, and the team did this both on time and within the agreed budget.

Turnkey
Automation

Automation has a significant role in enabling maximum productivity of warehouses in the future. From simple conveyor modules, to complex automated systems with controls and host system integrations, Conveyor Networks aims to provide a full turnkey solution that best fits your business and budget.

Conveyors: Our systems will ensure the controlled flow of goods throughout every stage of your warehouse from goods in, putaway, picking, packing and goods out.

Labelling: Reduce cost and complexity of labelling, with adaptable and intelligent automated labelling solutions. Our systems can cater for a variety of labelling options.

Sortation: Remove the need for human intervention and improve the speed and efficiency of products moving within your warehouse with our smart sortation solutions.

Bagging: Improve customer experience by ensuring perfect fit packaging for each product, as well as dramatically reducing packing times and space.

Scanning: Sort, count, measure and verify the size and shape of any product within a conveyor system easily and efficiently with automated scanning.

Boxing: Reduce packing times by up to 50%, decrease packing space and save on storage. Our automated boxing solutions will help reduce hidden costs in your operation.

Printing: Combining our advanced software with our automated printing solutions, to fully automate personalised promotional leaflets, invoices and return slips.

Picking: Technology has given us some excellent options for automated warehouse picking, increasing accuracy, productivity and flexibility, we can support on all picking challenges.
