

SOW SAFE

Natural Lawn Feed

Covers 100sqm approx.

SOW SAFE

Doff® Sow Safe Natural Lawn Feed will restore your lawn with minimum effort.

When To Apply

From February to September (when there is adequate warmth in the ground and grass is actively growing)

Application Rate

20-24g of Doff® Sow Safe Natural Lawn Feed per square metre.

How To Use

Mow your lawn as short as possible. Use a rake or scarifier to ensure that all dead grass, moss and debris are removed. Shake carton well and apply the mixture of seed and feed granules to the prepared area.

BY HAND

Use the built in applicator by tearing the side strip. Apply an even covering of compost over the lawn to ensure the same result across the whole lawn.

BY SPREADER

Mark the area and adjust the spreader to 24g/sqm application. Water the soil regularly and ensure it does not dry out.

Helpful Tip

Measure and mark area to be treated, this will avoid overdosing. To calculate the size of your lawn, multiply the length of the lawn by the width in metres. This will give you the area to be treated. As an indicator one large stride is approximately 1 metre. For outstanding results you can safely double the application rate. Do not exceed the maximum recommended rate of 50g/sqm. Overdosing with fertiliser can damage lawn.

It is recommended to wear garden gloves and wash hands after use. After 24 hours if there is no rain or in drought conditions and granules are visible on the surface water them in.

Avoid mowing directly after treatment or until the granules have dissolved.

Do not walk on the lawn until the granules have been watered in, as the iron in the product can stain paving slabs. Brush off immediately if accidentally spilt. This product is made from organic matter, an odour when storing, opening and applying the product is normal. Content may settle in transit.

Storage

Store in a cool dry place. Protect from frost. Keep out of reach of children and pets.
