

COUGAR INDUSTRIES

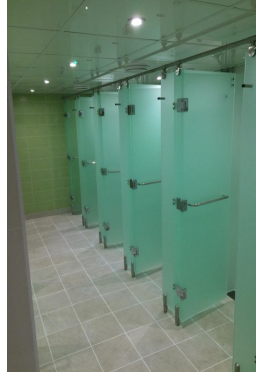

CASE STUDY

CLIENT:

Luxury health & fitness club
branch, scattered across the
country

PROJECT TYPE:

Replacement & installation of
several booster sets

REQUIREMENT:

The fitness clubs required their old faulty
booster sets, which had caused a stream of
complaints from their customers to be
replaced with pumps which enabled
sufficient pressure.

METHOD:

Cougar supplied and installed replacement
booster sets with a variable speed drive.
Which is proven to save a significant amount
of energy as the pump motors are slowed
down when demand is low, the reverse occurs
when more showers are in use.

RESULT:

The fitness clubs are now provided with
constant pressure to their showers (however
many are being used) due to
the efficient variable speed drives and brand new
booster sets.

“

Cougar's site engineers are trained in all
aspects of system installation including both
mechanical and electrical works.
We ensure safety comes first at each stage of
our work.
Being commercially aware with high ethical
standards allows us to do this.

”

Michael Kenny
