OpeMed Completes Adaptation for Disabled Child and Family

In association with a leading regional construction company, OpeMed have completed another tailor made project for a Case Management Client.

The new build detached bungalow features 6,000 square ft. of space to accommodate 5 bedrooms, carer's quarters and a hydrotherapy pool.

The rooms are designed to meet the specialist and individual needs of the disabled child as well as to suit the family in their home.

Specialist Equipment Installed

- H frame Ceiling Tracking with connecting gate systems throughout all rooms
- OT200 Ceiling Hoists with self charging
- Through Floor Lift
- Assisted ensuite Height Adjustable Bath
- Neatfold Changing Table built into Bath
- Adjustable Toilets
- Height Adjustable Sinks

Designed completely to meet the needs of the user and family; this detached bungalow has been built to accommodate for wheelchair turning space and transferring as well as increase quality of life for the user and carers

The infra-red, easy glide H systems and 6 hook spreader bars give total flexibility on sling use whether used with walking harnesses for therapy, bathing or simple user transfer

Ensuite bathroom features flexible H frame ceiling tracking with the OT200 ceiling hoist with automatic recharging and emergency lowering function.

The H systems fitted in the bungalow have been designed for minimum transfer time and maximum comfort and safety for the user and carer. The discreet tracking will provide the family with full room coverage for showering, toileting, bathing and transferring.

OpeMed's technical team works with architects, engineers, occupational therapists and parents to better understand the objectives and limitations of a project to ensure a good result within budget.

OpeMed design and install tailor made ceiling track systems for bespoke builds to ensure maximum room coverage and usability

The OT200 Ceiling Hoist is easily installed and all parts can be exchanged whilst the hoist is on the rail.
