## OVERVIEW

The Cheesewedge 'fold forward' ramp system is available on 18T-32T chassis. The Cheesewedge is able to fold forward to provide a totally flat deck, ideal for crane trucks, although the ramp can be stowed in the vertical position if required to give more deck space.

However this ramp is also suitable for non-crane trucks, as the combination of double-break beavertails and long toe sections give an excellent low loading angle suitable for most plant and access machines.

The toe section is also reinforced internally, allowing for the capability to manage up to 20 tonnes. This option also adds up to 15% fuel efficiency for the vehicle.

As standard cheesewedge ramps come as two 1.0M wide ramps, leaving a 500mm gap between each ramp.

Another option is to opt for a 'full width' ramp, which is a safer solution when carrying narrower machines such as rollers, but also gives a totally flat deck when folded right to the rear of the Truck. This is especially suitable for Crane Trucks, allowing the Body to be used as a 'flat bed', ideal for carrying accommodation.

To get the best of both worlds the cheesewedge ramp system is also available as a full-width ramp fitted with a 500mm gate in the centre, giving the luxury of both options. In this case the ramps would still give a totally flat deck when folded, but also allows a Excavator Bucket for example to protrude behind the ramps when vertical to maximize deck space.

## WHY CHOOSE STERLING?

### 1 THE HIGHER STANDARD

Our stringent Quality Assurance processes, combined with high quality materials and CE marked components, guarantee the reliability of the product and minimise down-time. Those exacting standards extend to our customer service too, the Sterling culture of integrity means responding quickly and keeping you informed at every stage of the process.

### 2

### BUILT TO LAST

Our products are built using only the finest and strongest materials, finished off with a galvanising process that ensures they stand the test of time. This eliminates the need for costly maintenance, making the cost of ownership lower. It also means that many truck manufacturers value a truck fitted with a Sterling body with up to 10% higher residual value.

### 3

### INSIGHTFUL INNOVATIONS

Intelligent additions, like our electro-hydraulically operated ramps, not only save effort, they save fuel too. That means lower operating costs overall. Or how about something you can't put a price on? The unique shallow loading angle of our cheesewedge ramp dramatically improves loading safety, giving you peace of mind.

### 4

### SMART DESIGN

Intelligent innovations are made all the better when they are easy on the eye. Our clean aesthetics give a visual boost to your brand image, hiding rams on our cheesewedge design and keeping overall clutter to a minimum.
