

SIP Trunking

Cost-effective and Scalable Solution to Grow Your Business

Your telephone service is your vital connection to your customers, remote and mobile employees, partners, and suppliers. Now is a great time to look at SIP Trunking technology, which delivers more capabilities at a significantly lower cost than traditional phone services.

Many businesses use traditional TDM lines for voice communications needs, but this requires two different network infrastructures and the costs associated with two networks. SIP Trunking enables voice and data communications to use the same network, resulting in **lower costs, greater flexibility, and the ability to respond to growth and changing demands.**

Product Details

Significant Cost Savings

- Considerable cost savings over traditional PRLs or analog lines
- Replace your separate voice and data circuits with a single circuit
- Low long-distance rates

Optimal Bandwidth Usage

- Bandwidth is allocated dynamically, allowing it to remain available for data when not used for voice calls
- G.711 voice compression uses the least possible amount of bandwidth for calls, ensuring superior quality

Affordable Scalability

- Avoid unnecessary costs by purchasing only the trunks you need
- Scale in small increments as you grow

Exceptional Reliability

- Voice traffic travels on First Communications' secure private network
- Voice traffic is prioritized over data packets for crystal-clear calls

Optional Add-on Features

- Improve company productivity with Inbound Fax-to-Email

Benefits

Reduce Operating Costs

Significantly less expensive than traditional analog phone lines and PRI networks. By combining voice and data over a single IP connection, SIP Trunking eliminates the need to purchase voice and data circuits separately.

Uses Existing IP Phone Equipment & Reduces CapEx

First Communications SIP Trunking works with your existing IP PBX equipment, so there is no need to spend money replacing phones and equipment.

Flexible Broadband Options

First Communications can provide a variety of reliable and secure business broadband options, with consistently clear high quality connections. You can also provide your own broadband connectivity if that is preferred.

Optimize Bandwidth

First Communications automatically adjusts the bandwidth for voice and data traffic to provide optimal use of your network resources. Bandwidth can be allocated to voice services as needed, and then re-allocated back to data when the voice usage subsides.

Nationwide Availability

First Communications can provide your business with SIP Trunking services anywhere in the United States.

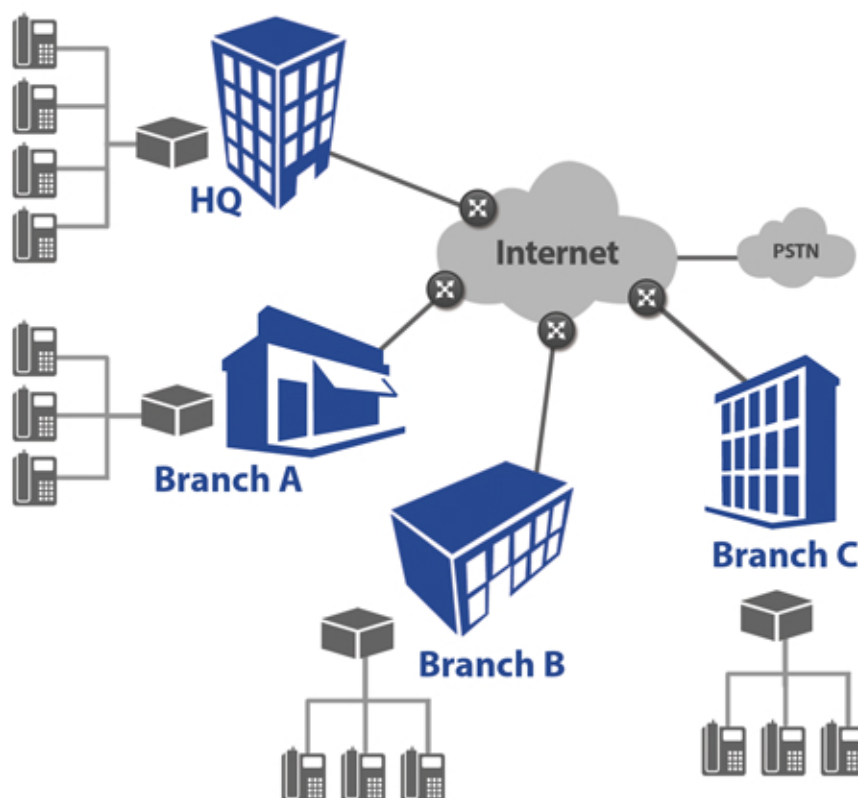

24x7x365 Support

Because your business isn't just about 9-5 anymore, our experienced and dedicated support team is available at any time, and we have repair technicians available after traditional business hours in order to keep your business communications running smoothly.

★★★★★ The First Communications Five-Star Service Difference

We are **100% committed** to providing you with the highest level of customer service in the industry. To accomplish this, we provide you with a team of dedicated, highly trained and empowered specialists to ensure a Five-Star service delivery experience.

Here's how we are different:

We provide a Customized Solution

Your dedicated, highly experienced Sales Engineer will perform a thorough assessment of your current environment and service needs, and will work with you to design a customized solution.

You get a dedicated Project Coordinator and a smooth implementation

Your dedicated and experienced Project Coordinator will guide you through the implementation process, so that your custom designed solution is installed in a seamless and professional manner.

You get Five-Star support from a dedicated Client Relations Manager

After installation, your dedicated Client Relations Manager (CRM) will serve as a single point of contact. As your business and network needs grow, your CRM can assist with configuration changes, the addition of new locations, or any other support you might need.
