Deionised water FAQs

What is deionised water?

Deionised water is the purest form of water. Over time normal tap water will start to erode battery cells so by removing these impurities (sodium, calcium, iron, copper, chloride and bromide) battery life and efficiency will increase.

Why use deionised water instead of distilled water?

Deionised water is 4 times cleaner than distilled water so it is the best water choice for battery life and efficiency.

What sizes are available to buy from Fortis Battery Care?

We sell deionised water in single 25 litre containers or in pallets of 12 containers, a total of 300 litres of water.
