Equipment Sales & Hire

Cunnings supply a wide range of audio and visual products from the latest digital mixers and projectors to amplifiers, speakers, loop systems, LCD screens and smaller components including cameras, cables, microphones, headphones and batteries.

And if you need a cable or microphone, a system for a special event or a complete solution including setting up and operating we have a range of audio and visual equipment available for short or long term hire.

Contact Us

We enjoy building good relationships with our customers. It is reassuring for our customers to know that when they need us we are at the end of a telephone line or email ready to help.

Speak to one of our friendly team for great advice on choosing the best audio and visual products for your system or to discuss the details of your project.

Our Experience

Installing a good quality audio or visual system into any building is not a task which should be entered into lightly. Every building has unique requirements which need to be considered but when that building is a church, listed building or other prestigious building then experience really counts.

A new audio or visual system can represent a significant budget for any church or organisation so it is important to get it right first time. There is rarely the opportunity to put things right later which makes choosing the right solution, and ultimately the right company, all the more important.

*“We don’t just know the name of a product,
we fully understand how it works too”*

Cunnings Recording Associates is a family run business based in South London. We have been designing, supplying and installing quality audio and visual systems for churches and prestigious buildings since 1977. Our experience of working with church audio and visual systems started even earlier when Proprietor, Malcolm Cunnings, who is himself a member of the Institute of Sound and Communication Engineers (ISCE), was technical consultant for the refurbishment of All Souls

Church, Langham Place, completed in 1976.

In 1996 Cunnings took over Keith Monks Sound Systems, well known for their work in smaller churches, and continues to provide the very best audio and visual systems to venues of all sizes throughout the country from heritage buildings to modern auditoriums. Our product and technical knowledge and engineering background gives us a unique perspective. We don’t just know the name of a product, we fully understand how it works too.

Installation

We have a passion for providing great quality audio and visual systems for our customers which are well designed and easy to operate. We know from experience that it makes sense to invest in an audio visual system that will last. Cunnings use the latest audio and visual technology and our many years of experience to integrate modern technology into historic buildings in a way which does not detract from the architectural beauty. One example of this is the use of LCD switchable glass projection screens - a unique technology ideal for churches where traditional projection solutions cannot be used.

“We know from experience it makes sense to invest in an audio visual system that will last”

Even small venues can require complex systems to meet the needs and expectations of users. This makes it important to use a company who can provide audio, visual and induction loop facilities for the hard of hearing and ensure that all these systems integrate well together. Choosing a company with the right experience is therefore key to achieving a great system.

Cunnings take systems from inception and planning through to integration and completion and we pride ourselves on guiding customers through each step of the process, regardless of their own technical knowledge.

Training & Support

Many venues and churches don't have the luxury of a regular operator and so it is important that any system can be easily controlled. Even the best

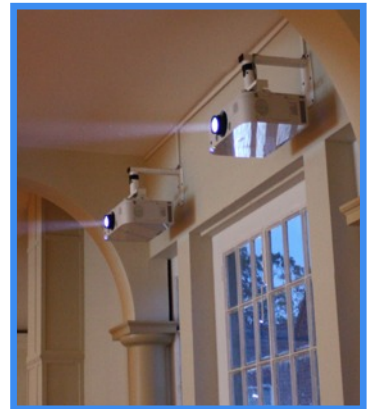

system can only achieve its potential if it can be easily operated on a day to day basis. We make the best use of technology to provide systems to our customers which are really easy to use. We do all the hard work of programming and setting up the system so that it can be controlled with the press of just a few buttons.

We are aware that a good audio and visual system will only work well if it is used properly, and we provide all our customers with basic training at the time of installation, allowing the operators to become familiar with their new equipment. We also offer dedicated training sessions at your venue, individually tailored to your specific equipment, which can be a useful opportunity to ask questions or train up new team members.

“With a good quality system any maintenance or repair is minimal”

With a good quality system any maintenance or repair is minimal. However, we understand that things can sometimes go wrong and we are on hand to provide help and assistance regardless of the age of the installation.

With many years experience and a knowledgeable team of engineers we are able to bring your system back to full working order, including servicing and repair of audio and visual equipment either on site or in our well equipped workshop.
