# Display Cabinet Graphics
Installation Instructions

You will require a sharp blade or knife, a squeegee, spray water bottle and a clean cloth.
Ensure the film is kept clean whilst handling.
**DO NOT** fold or crease the film.

**1.** First, make sure to clean the surface with soapy water or rubbing alcohol.

2. Use a knife (at your own risk) to scrape off any surface bumps or anything that is stuck to the surface that will interfere with your new graphic.

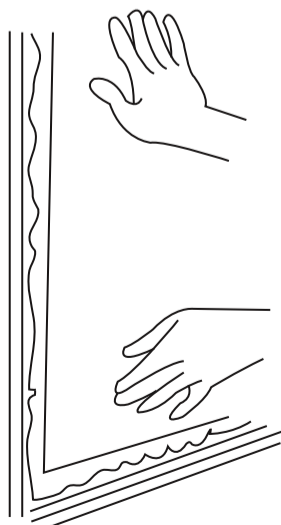

3. Spray the mounting suface with plenty of very weak soapy water, this makes it easier to reposition the graphics.

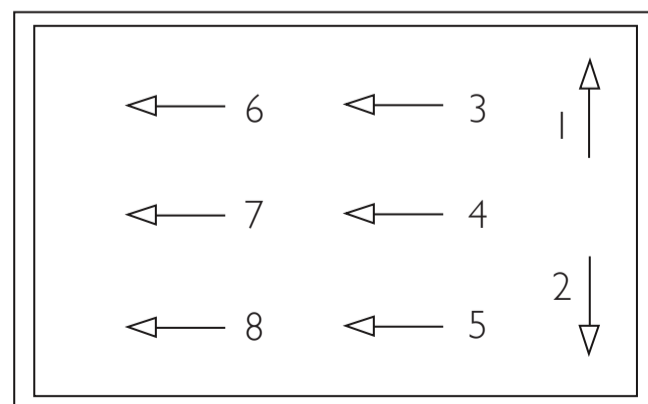

4. Seperate the backing liner from the printed vinyl.

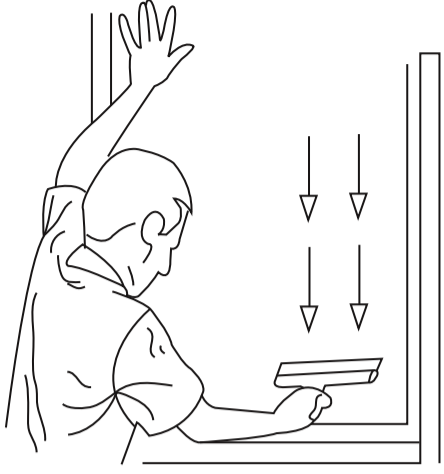

**5.** Place the adhesive side of the vinyl on the surface you're applying the graphics to.

6. When in the correct position, squeegee the film following this pattern.

7. Smooth out any imperfections or bubbles.

8. Trim any overlap with a stanley blade or sharp knife.

9. Wipe a cloth over the graphic and stand back to admire your look!
