### Upgrade Your Thomas Machine with Helpful Advice from the Experts...

Thomas Automatics has been building reliable, highly-regarded change machines and kiosks in the UK for more than 30 years. Manufacturing expertise and technical support has evolved further since the company was acquired by Eurocoin Ltd in 2010, and thousands of Thomas machines continue to deliver payment processing solutions across the UK and around the world.

The imminent arrival of the new, highly secure UK polymer bank notes, to be followed swiftly by the 12-sided £1 coin, is therefore of great significance to Thomas machine owners and operators throughout the UK. We are delighted to inform all of our clients that we have well-defined and affordable upgrade pathways for all of their Thomas machines in active operation!

- The new UK £5 note will enter circulation on 13th September 2016
- The new £1 coin will enter circulation in March 2017
- Old and new notes & coins will both co-exist for approximately 6 months, before the older £5 notes and £1 coins are withdrawn by the Bank of England
- The new £10 and £20 notes will follow between 2017 and 2020

# Upgrade Pathways

We Have a Complete Solution for You

In terms of upgrading your Thomas devices to accept and payout these new notes and coins, whilst still processing the existing versions of the currency, we have 3 main pathways for the coin and banknote validators & dispensers in-built to the machines:

- Current models of validators may require only a software version upgrade & test
- Certain models might require a software update plus a mechanical modification to accept new notes & coins
- Older coin and note validators or payout devices might be 'end-of-life', in which case no upgrade pathway to the new notes and coins will be available. In these circumstances, a new, current 'drop-in' replacement unit has been tested & approved by our Technical Support team and can be supplied to extend the life and functionality of your Thomas machine.

Bank Note Validator model	Supports New Polymer Notes?	Upgrade Path for Thomas Change Machine Customers	Part Number of New Product/Kit
