# Cogard 1000 Standalone – Security Patrol System

Security is crucial, but with this Cogard 1000 Standalone, you can now install a wall station at each of your strategic checkpoint along the routes of your security personnel patrols. This machine offers a complete and clearly organized list containing all checkpoint entries. It is easy to use so that the personnel only needs to touch the handheld data collection unit to the wall station and the date, time of day and station's ID number will quickly be registered.

The correct transfer is confirmed through a beeper sound and a flash of light. The handheld unit is recharged at the end of a shift, by simply inserting the handheld unit into the station box, where the data will be processed and printed. ***Note: This is a non-pc linked solution!***

Features:

- Electronic Checkpoint System for Security Personnel with integrated printer
- Magnetic contacts for reliable operation in any weather
- Maintenance-free
- Tamper-proof
- Easy to use

Handheld Data Collection Unit:

- Lightweight (275g) and easy to use
