S2
by JCONCEPTS

S2, IFMAR WORLD CHAMPIONSHIP WINNING BODY

Backing up a successful design is perhaps the most difficult task in design and engineering. Faced with the challenge, the crew at JConcepts once again went to work to outfit the team during the 2015 IFMAR World Championships with a body capable of enhancing performance. Dubbed the S2, the new shell rocks some familiar features but rolled together with a low-profile stance.

The new S2 bodies are also available in a Lightweight version making them ideal for 17.5 stock racing. The light-weight versions, unpainted without decals tip the scales at ~12-15gm lighter than their standard counterparts in the same condition. For identification purposes, the LW bodies feature a green protective film.

HI-FLOW 2

HF2 SCT BODY - LOW-PROFILE RACING BODY

JConcepts has won an unprecedented 10 of 12 RDAR National Championships in the SCT division by constantly innovating and pushing the envelope in performance. Winners never rest, and whomever quoted "sequels are never as good as the original," certainly has not seen an HF2 body by JConcepts.

Air escape details continue to be all the rage in SCT racing and the HF2 body continues the tradition of successful bodies with increased options. Full rear opening capability just behind the cab releases air in the most crucial of areas.

HAZARD RADIO WHEEL W/DIRT-TECH FOAM GRIP

Specifically designed for the Sanwa | Airtronics M12 and MT4 radios, the Hazard radio wheel is precision molded like its siblings but sized appropriately for one of the most successful radio lines on the market.

#2450

DIRT WHEEL - FOAM GRIP, YELLOW

Handling the steering wheel is easy with the release of the Dirt Wheel foam grip. The durable, yellow colored material has now reached the all important steering wheel for radios.

#8004

7MM FIN QUICK-SPIN WRENCH
#2263-1 (BLUE)
#2263-2 (BLACK)

17MM FIN QUICK-SPIN WRENCH
2279-1 (BLUE)
#2279-2 (BLACK)

FIN QUICK-SPIN WRENCHES

During a typical day at the track, a racer spends a great deal of time taking the tires on and off of their vehicles. A somewhat menial task but definitely part of routine preparation. JConcepts is making this job a little easier with the release of the 7mm and 17mm Quick-Spin wrenches.

T5M | SC5M SPRING STEEL CVA SET

The drive system on any vehicle is critical but in off-road racing where long stroke suspensions are commonplace, CVA performance is vital. JConcepts introduces a CVA set built for performance, durability and a high dose of glamour.

The bones have been machined of spring steel material for the ultimate in durability and performance and inserted with hardened steel pins on the drive ends.

WARRIOR

WARRIOR - B5M BODY

The Warrior body by JConcepts features a design that has, frankly, gone a little mad. The design process was simple, throw out the conventional principals and center the design around a battle tested look, fit and finish.

The racer's eye is drawn to the unique split front window, protecting the cockpit from the occasional aerial assault of lap traffic. The rear upper pods are pronounced, heavily drafted and blended to the chassis side-guard covers, allowing plenty of electrical clearance inside the shell.

Bronco

1974 FORD BRONCO - TRAIL / SCALER BODY

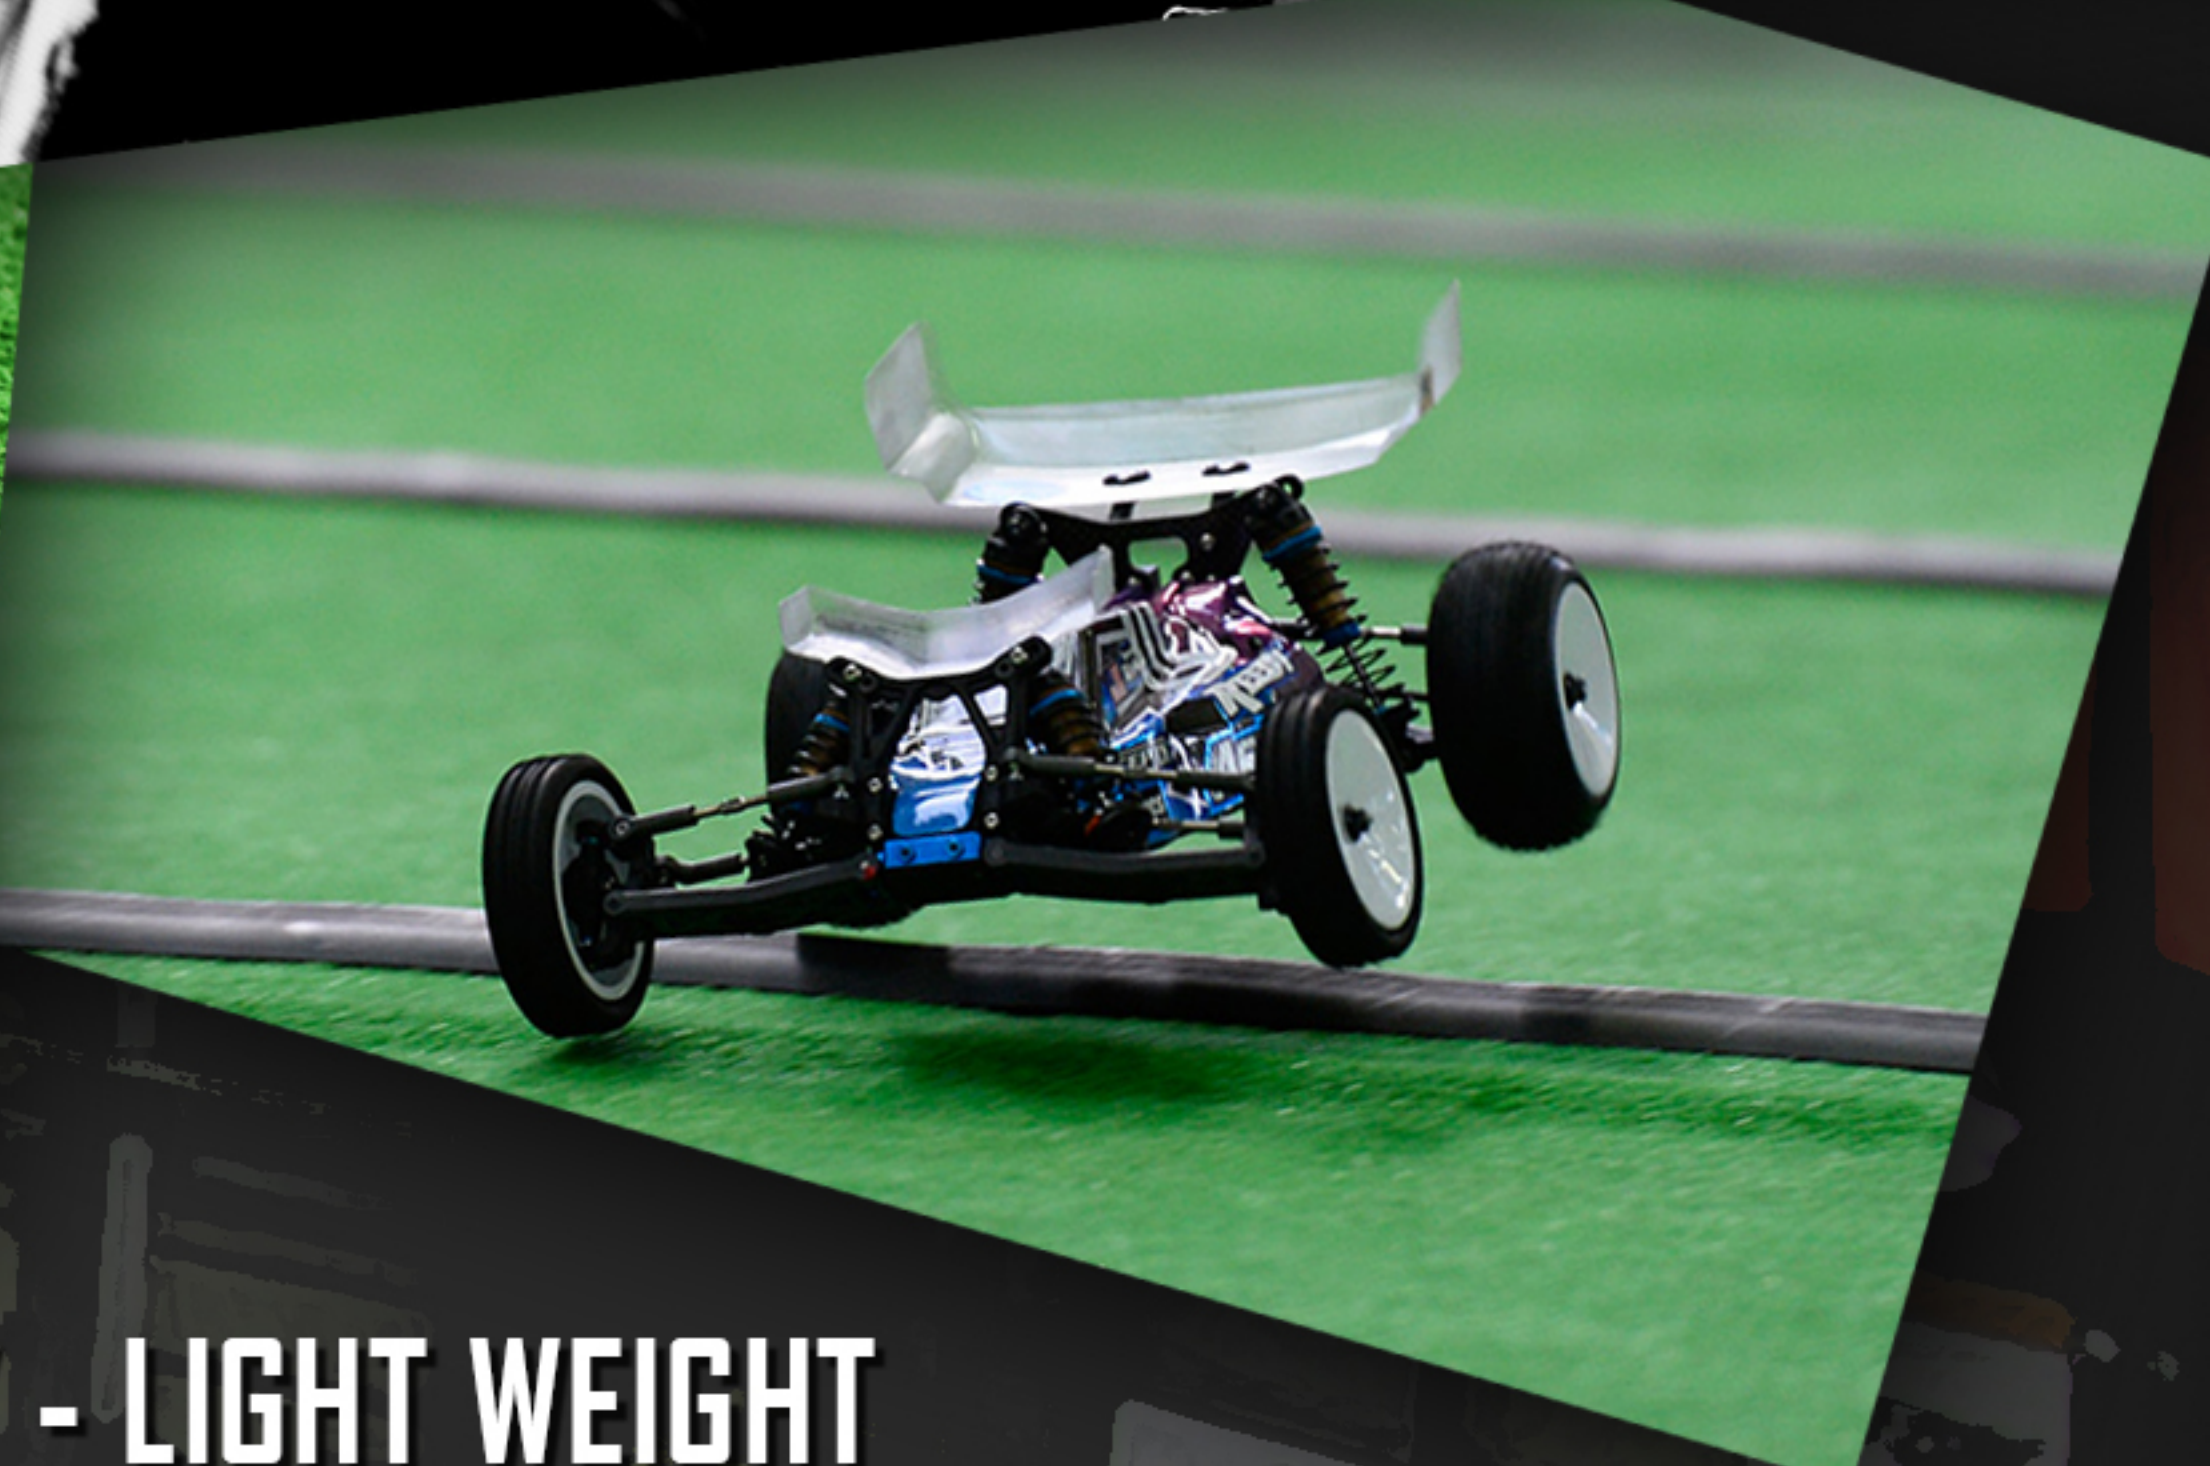

In the 1970's, styling was subordinate to simplicity and economy and JConcepts has recreated a legend. Starting with the unforgettable chiseled shape, the Bronco lives on with an impressive grill area detailed with included decal sheet. The large hood area and fender line is sharp while the main body line runs across the entire door and rear fender. Large fender flares provide tire clearance for a variety of 1.9" tires and protrude just like the real thing.

The wheels and tires shown are available separately through JConcepts.
#3057-02 Scorpions - green compound - all-terrain scaler (fits 1.9" wheel)
#33738 Hustle - 1.9" Vatterra Ascender 12mm glue-on wheel - (black w/ silver face plating) - 2pc.

S2 - B5M WORLDS BODY - LIGHT WEIGHT #0294L

JConcepts unveils light-weight bodies specifically for the Team Associated B5M buggy kit. The hottest new bodies on the market are now available lighter than ever. The light-weight versions, unpainted without decals tip the scales at ~12-15gm lighter than their standard counterparts in the same condition. For identification purposes, the LW bodies feature a green protective film.

ALUMINUM SERVO MOUNT BRACKET #2445-1 (BLUE) #2445-2 (BLACK)

The servo mount bracket can be installed without any modifications or additional equipment in the 5 series of vehicles and immediately brings peace of mind to the detail oriented racer. With a sleek wrap-around like design, silver edge chamfering and etched JConcepts.net logo the bracket adds consistency with aesthetic appeal.

4MM LARGE FLANGE SERRATED LOCKNUT #2341-1 (BLUE) #2341-2 (BLACK)

These high precision wheel nuts are designed with a large flanged area for additional support against the wheel and serrated for locking security. The large flange and clamping surface area supports the wheel and helps maintain geometry during flex and load.

ILLUZION - 6.5" HI-CLEARANCE WING #0127

1/10th buggies are dependent on the rear wing for traction, flight control and balance. The Hi-Clearance wing from JConcepts incorporates several important elements making it the most versatile JConcepts wing yet.

FINNISHER B5 | B5M FRONT WING

FLAT ARM #0148 (NARROW) #0149 (WIDE)
GULLWING ARM #0150 (NARROW) #0151 (WIDE)

JConcepts, together with their pro racing team of drivers, developed a new high-performance, adjustable front wing. Mounted above the front shock tower on the B5 series of vehicles, the Finnisher front wing mounts in "clean air" and is quite easy to trim, use and test without sacrificing all important track time. Available in 2 widths, the driver can choose either the "narrow" for a lighter feel or "wide" for heavier down force.

FINNISHER WING BUTTON #2214-1 (BLUE) #2214-2 (BLACK)

JConcepts additionally offers an all aluminum wing button specifically for the screw-in type wing mounts. The machined aluminum design with durable outer rim and stylish hex design offers a bit more security over traditional plastic wing buttons. The design incorporates through-holes and notched hexes which make it incredibly light-weight but strong in all the important areas.
