DECLARATION OF FIRE CLASS REACTION MPS200

In compliance with rules stated in UNI EN 13501, Hot Dip Galvanised products painted with a PVC film (plastisol) having a thickness of 200 microns are to be considered as belonging to class C-S2-D0 as for reaction to fire, without any need to perform relating verification tests.

It is therefore declared that Marcegaglia S.p.A. prepainted products belong to Class C-S2-D0, since the same are non homogenous, being constituted from substantial components (hot dip galvanised) and non-substantial components (organic film coating).
