Database and Software Hosting

EHS Data offers a full range of professional hosting options to take the hassle out of managing your own system. For clients who own perpetual licences we provide Plaform as a Service (PaaS). For those who prefer leasing, we offer Software as a Service (SaaS) - commonly referred to as 'Cloud computing platform'.

All of our hosting includes full administration of MonitorPro systems, support, maintenance, updates to the software, and all hosting costs including hardware, operating system and SQL Server licencing.

Our servers are based in secure data centres. Our primary servers are based in the UK, however we also offer to host servers in regional data centres.

Depending on database size and anticipated usage we offer a choice of either dedicated servers, or more cost-effective shared resources.

Platform as a Service (PaaS)

*You **own** the software,
we host and manage it.*

Platform as a Service, commonly known as PaaS is a service EHS Data can provide, which negates the need for clients to host the MonitorPro system themselves. EHS Data offers clients a cloud computing platform, which hosts a client's perpetually purchased MonitorPro licences. We take care of the operating system, SQL Server and Remote Desktop Services licencing along with updates and maintenance of your system, This option is ideal for clients where they don't have sufficient internal IT support to manage the system themselves. It can also prove cost effective where clients already outsource their IT support or hardware to a 3rd party. The result is we can take all the hassle out of the setup and support, knowing we're on hand should anything be needed.

PaaS is offered as a monthly subscription, you are free to take up PaaS at any time, if you own your own MonitorPro licences. Support is included in your monthly payments at either Essential or Premium level, depending on your requirements.

Software as a Service (SaaS)

*You **lease** the software,
we host and manage it.*

EHS Data offers Software as a Service (SaaS) commonly referred to as a cloud platform. This removes the need for clients to host or administer a MonitorPro system themselves. Unlike PaaS described above there is no need to purchase perpetual licences, as the cost of leasing them is included in the monthly cost. This greatly reduces the early capital costs associated with purchasing perpetual licences and enables clients to expand the system at any time simply increasing the monthly subscription amount. Contract terms are required and typically range from 1-3 years in duration, but can be extended indefinately.
